# SUBJECT INDEX

A

AAA. See Allies Against Asthma
ACA. See Affordable Care Act
Accumulation hypothesis, 154–155
Acquired Immune Deficiency Syndrome (AIDS), 7; communication inequalities and, 336; Diffusion of Innovations theory and, 11; secondary appraisal for, 228; stressors and, 225; Theory of Reasoned Action and, 11; TPB strategies for, 69; TRA strategies for, 69
Action stage, 126, 128
Active Implementation Framework, 305
Active Living by Design, 56
Acute stress, 235
Adolescents: peer influences during, 214; stress and, 225; tobacco use among, 213–215
Advocacy, for patients, 250
Affordable Care Act (ACA), 12, 281; behavioral economics under, 403
African Americans: community organization by, 280; health behavior strategies for, 13–14; in It's Your Game... Keep It Real program, 378; life expectancy for, 14; smoking cessation strategies and, 139
Age, TTM influenced by, 141
Agency. See Personal agency
Agenda setting, 334–335; problem identification in, 335
AIDS. See Acquired Immune Deficiency Syndrome
Alcohol abuse, 389; social support and, 192–193
Allies Against Asthma (AAA), 290
Allostatic load perspective, 231, 235
American Stop Smoking Intervention Study (ASSIST), 290
Anxiety and panic disorders, 126
Applied theory, 33
ARC model. See Availability, Responsiveness & Continuity model
Artemisinin-based combination therapy (ACT) treatments, 430
ASSIST. See American Stop Smoking Intervention Study
Asymmetrical paternalism, 393
At-risk groups: Health behavior changes and, 14–15; Intervention Mapping and, 369
Attention, 167
Attribution Theory, 36
Audience characteristics: biased processing and, 333; in mass communication, 332–333; in social marketing, 413; theory of reactance and, 332–333
Audience segmentation: in CHL program, 427–428; in social marketing, 418; by UHMG, 432
Australia, ecological models in, 56
Availability, Responsiveness & Continuity (ARC) model, 306
Awareness, 307

B

Barriers. See Perceived barriers, in HBM
Behavior settings, 48
Behavioral beliefs, 97; condom use and, 112
Behavioral capability, 169–170; in CATCH case study, 173; knowledge and, 166
Behavioral economics, 353–354; under ACA, 403; applications of, 399–403; asymmetrical paternalism and, 393; bounded rationality and, 391; choice architects in, 398; classical economics and, 390–393; core concepts of, 391; decision errors in, 394; default bias in, 398; expected utility theory and, 353, 390; false hope syndrome, 396; framework for, 393–399; hyperbolic discounting, 393; incentive delivery in, 394; internalities in, 393; loss aversion ratio and, 392, 396–397; in medication adherence strategies, 401–403; narrow bracketing in, 397; nonlinear probability weighting in, 395–396; overoptimism in, 396–397; peanuts effects and, 397; present bias in, 394–395; purpose of, 353; rational-world bias in, 398–399; regret aversion in, 397–398; value-based
insurance design, 403–404; in weight-loss interventions, 399–401

Behavioral intentions. See Intentions, behavioral

Behavioral Risk Factor Surveillance System, 237–238

Belgium, ecological models in, 56

Beliefs: behavioral, 97, 112; control, 98, 100; efficacy, 112; identification of, 114; for male circumcision intention, 115–116; self-efficacy, 229; Zimbabwe HIV prevention programs influenced by, 111. See also Health Belief Model; Normative beliefs

Belonging social support, 186

Benefit finding, 227, 232

Benefits: in CHL program, 425; through social marketing, 413–415; in UHMG, 430. See also Perceived benefits

Betweenness centrality, 209

Bias: default, 398; present, 394–395; rational-world, 398–399; self-selection, 55; status quo, 398

Biased processing, theory of, 333

Bidi smoking, 177

Big data, 207

Biomedical model, of medicine, 245; revolution in, 327

Biopsychosocial models: for interpersonal communication, 245; for stress, 235

Blunters, 233

BMI. See Body mass index

Bobo doll study, 159

Body mass index (BMI), 389–390

Bounded rationality, 391

Bowling Alone, 151

Branding, 419

Breastfeeding, 95

Bridging individuals, 209

C

Canada, health education in, 7–8

Cancer screenings, 95, 126; Intervention Mapping approach to, 366

Cancers: secondary appraisal for, 228; stressors and, 225

Capacity, of communities, 283–284; development of, 287–288; PRECEDE-PROCEED Model and, 363

CATCH program. See Coordinated Approach to Child Health program

CBPR. See Community-based participatory research

CEnR. See Community-engaged research

CFIR. See Consolidated Framework for Implementation Research

Change objectives, 370

Change theories, 27, 371; Logic Model of Change, 369

CHD. See Coronary heart disease

Child obesity, 174

Childhood: coping responses during, 236; stress exposure during, 236

Chinese Progressive Association (CPA), 292–293

CHL. See Communication for Healthy Living program

Choice architects, 398

Choice bracketing, 397

Chronic diseases, 7; Intervention Mapping approach to, 366

Chronic pain, 259–260

Chronic stress, 225

Circumcision, male: belief constructs and, 115–116; intentions for, 115–116; in Zimbabwe HIV prevention programs, 111–117

Classical economics, 390–393; core concepts of, 391

Closeness centrality, 209

Clustering, 210

Coalitions, in community building, 278, 289–290; in smoking cessation strategies, 290

Cochrane Collaboration, 6

Code theory, health interventions and, 4

Cognitive consistency, 37

Cognitive model, 257

Cognitive Theory, 76

Co-learning, 285

Collective efficacy, 164

Colon cancer screening: FOBT for, 85; HBM for, 84–86; perceived barriers in, 86; perceived benefits in, 86; perceived susceptibility in, 85; self-efficacy in, 86

Colon Testing: Celebrate Life for Years to Come, 85

Commercial marketing, 413

Communicable diseases. See Infectious diseases

Communication for Healthy Living (CHL) program, 424–429; audience segmentation in, 427–428; behavioral focus in, 425; consumer benefits and, 425; market perspective for, 425–426; outreach locations in, 426; price in, 426; product access in, 426; products in, 426; promotion
in, 426–427; research for, 428–429; use of behavior theory in, 428–429
Communication technologies: health behavior changes through, 9; ICTs, 13; revolution in, 327. See also Internet; Mass communication
Communities: capacity of, 283–284, 287–288; as concept, 278–279; critical consciousness in, 284–285; cultural perspective for, 279; defined, 278, 282; ecological systems perspective for, 278; empowerment in, 284–285; geographic, 279; historical perspective for, 279; individual perspective for, 279; Ladder of Citizen Participation and, 282; locality development for, 287; participation in, 286–287; photovoice approach to, 286; recognition of inequity, 287; relevance in, 286–287; social action in, 288; social action model for, 289; social advocacy in, 288; social capital in, 282; social planning and policy for, 287–288; social systems perspective for, 278–279; virtual perspective for, 279
Community building: coalitions and, 278, 289–290; community organization compared to, 288; models for, 287–289; partnerships and, 278, 289–290; social action model, 289; typology for, 289. See also Organizational interventions
Community organization: by African Americans, 280; community building compared to, 288; composite models for, 288; defined, 277–278; feminist, 288; history of, 280; models for, 287–289; participation strategies for, 280; by people of color, 288; predominant mode for, 288; social action model, 289; typology for, 289. See also Organizational interventions
Community Popular Opinion Leader (CPOL) model, 109–111; evaluation of intervention effects, 111
Community Preventive Services, 16
Community Tool Box, 287
Community-based health promotion, 11–12
Community-based participatory research (CBPR), 272, 278, 290–291; Intervention Mapping and, 366
Community-engaged research (CEnR), 278
Compass Strategy program, 373
Complex systems models, for ecological models, 59–60
Computers, 246–247
Concepts, in health behavior theory, 27
Conceptual Model for the Diffusion of Innovations in Service Organizations, 305
Condom use: belief correlations for, 112; in Zimbabwe HIV prevention programs, 109–112
Confirmation, 307
Consciousness raising, 125–126
Consequences. See Self-evaluative consequences; Social consequences
Consolidated Framework for Implementation Research (CFIR), 272, 275; application of, 313–314; applications of, 312; definitions in, 312; D&I of public health interventions and, 306, 312–314; empirical evidence for, 313; key components of, 312; operationalization of, 313; in substance abuse disorder treatment, 313–314
Constructivist paradigms, 29
Constructs, in health behavior theory, 27
Consumer-driven approaches, to social marketing, 419–420
Contemplation stage, 126
Contingency management, 125
Contraception use: IBM strategies for, 107; SNA and, 212–213; SNT and, 212–213; TPB and, 95; TRA and, 95. See also Condom use
Control beliefs, 98, 100
Coordinated Approach to Child Health (CATCH) program, 171–175, 309; behavioral capability in, 173; intentions in, 173; operationalization constructs in, 172; reciprocal determinism, 172; in school
environments, 174–175; self-control in, 173; self-efficacy and, 174; social environment in, 173–174

COPE scale, 229

Coping: allostatic load perspective for, 231, 235; benefit finding and, 227, 229; childhood factors for, 236; COPE for, 229; development strategies, 230; disease and, 225; dispositional styles, 227; emotional regulation, 227, 229; escape-avoidance behaviors, 227; extensions of, 226; fight-or-flight response, 224; health disparities and, 234; historical concepts of, 224–226; human physiology and, 235; information seeking and, 227, 232–233; John Henryism, 234; meaning-based, 227; Multidimensional Coping Inventory for, 229; optimism and, 227, 231–232; outcomes of, 227, 230; prenatal care and, 236–237; problem management, 227, 229; research on, 231; shift-and-persist, 155; shift-and-persist style, 236; social support and, 229, 233–234; stress and, 154–155; styles of, 231–234; transactional models for, 226–235; WOC for, 229

Coping Orientations to Problems Experience (COPE) scale, 229

Coronary heart disease (CHD), 191

Counterconditioning, 127

CPA. See Chinese Progressive Association

CPOL model. See Community Popular Opinion Leader

Critical consciousness, in communities, 284–285

Cues to action, in HBM, 68, 76–78

Culture: community and, 279; SCT applications influenced by, 175–177; smoking cessation strategies influenced by, 176; TTM and, 141

D

Decision errors, in behavioral economics, 394

Decisional balance, 127, 129

Decisions, 307

Declaration of Alma-Ata, 280

Default bias, 398

Degree centrality, 209

Delayed action effects, 138

D&I. See Dissemination and implementation research, for public health interventions

Diabetes, 8; social support for, 196–197

Diffusion, 304

Diffusion of Innovations theory, 11, 30; in communities of practice, 309; for community interventions, 275; components of, 306–307; D&I of public health interventions, 304–311; empirical evidence for, 307–309; for group interventions, 275; operationalization of, 307; for organizational interventions, 275; Pool Cool Skin Cancer Prevention Program, 310–311; SNA and, 205; social marketing and, 354, 420–421; updated review of, 32

Digital divide, 336

Direct effect model, for social support, 187–190; empirical evidence for, 189–190; RRT and, 189

Discrimination theory, 371

Disease: CHD, 191; chronic, 7, 366; coping and, 225; health behavior changes and, 7–15; natural history of, 365; NCDs, 4–5, 389; in PRECEDE-PROCEED Model, 365; stress and, 225. See also Infectious diseases

Dispositional styles of coping, 227

Dissemination and implementation (D&I) research, for public health interventions: challenges in, 315–316; core concepts of, 314–318; design for, 316–318; diffusion curve for, 303; Diffusion of Innovations theory and, 304–311; of EBIs, 301, 309; EBPH and, 315–316; future research directions for, 314–318; growth of, 314; key terminology for, 303–304; measurement tools for, 316–318; methods for, 316–318; models of, 303–314; Pool Cool Skin Cancer Prevention Program, 310–311; practice-based evidence in, 315; purpose of, 301; theories of, 303–314

Dissemination research, 304

Downstream focus, in social marketing, 415

Downstream health behaviors, 11

Dramatic relief, 126

E

EBIs. See Evidence-based interventions

Ebola, 7; health interventions for, 275

EBPH. See Evidence-based public health

Ecological models: application of, 59; applications of, 49–57; as behavior-specific, 49; in complex systems, 59–60; contemporary, 46–47; critiques of, 57–60; direct environmental effects in, 45; empirical requirements for, 53; environmental perceptions in, 45;
evaluation of, 59; five principles of, 48–49, 58; historical background for, 43–48; interactions across, 54; international studies for, 55–56; limitations of, 57–58; multiple theories in, integration of, 44–45; for physical activity, 51–53, 56–57; Project RESIDE, 55; for sedentary behavior, 51–53; self-selection bias in, 55; for smoking cessation strategies, 49–51; strengths of, 57–58; study designs for, 54–55. See also Health behavior theory; Social Cognitive Theory; Social Learning Theory
Ecological Psychology Model, 46
Ecological systems perspective, for community, 278
Ecosocial Model, 46
Education. See Health education
Effectiveness and Efficiency, 314
Efficacy beliefs, condom use and, 112
Egoistic suicide, 186
Egypt. See Communication for Healthy Living program
Elaboration Likelihood Model (ELM), 329, 331; defined, 371
Elicitation phase, 107–109; in Zimbabwe HIV prevention programs, 110, 113
ELM. See Elaboration Likelihood Model
Emotional arousal, 164
Emotional support, 168, 186, 189
Emotions: health behaviors influenced by, 71; in interpersonal communications, 248; physicians’ regulation of, 248, 254–255; regulation of, 227, 229
Empathic understanding, model of, 257
Empowerment, in communities, 284–285; mentorship and, 285; organizational, 285
Enabling factors, 364
Engagement. See Community engagement
Environmental Psychology Model, 46
Environmental reevaluation, 126
Epidemiology: health behavior changes influenced by, 6; PRECEDE-PROCEED Model and, 364, 373–374; stress and, 225; Youth Mental Health Community Awareness Campaign and, 373–374
EPPM. See Extended Parallel Processing Model
ERGMs. See Exponential random graph models
Escape-avoidance behaviors, 227
Esteem support, 168
Evaluation: of community engagement, 293–294; of ecological models, 59; impact, 377; in Intervention Mapping, 377; outcome, 377; in PRECEDE-PROCEED Model, 366; process, 377; of smoking cessation strategies, 138–139; of Youth Mental Health Community Awareness Campaign, 377
Evidence-based interventions (EBIs), 273, 275; defined, 304; D&I of public health interventions, 301, 309; diffusion curve for, 303; dissemination of, 5
Evidence-based public health (EBPH), 315–316
Exemplars, 331–332
Expected utility theory, 353, 390
Experience, self-efficacy through, 163
Experiential attitude, 105
Experimental knowing, 23
Explanatory theories, 26–27
Exponential random graph models (ERGMs), 215
Extended Parallel Processing Model (EPPM), 354; in social marketing, 421–422
F
False hope syndrome, 396
Families, interpersonal communication with, 247
FCTC. See Framework Convention on Tobacco Control
Fecal occult blood testing (FOBT), 85
Feminist community organization, 288
Field Theory, 37
Fight-or-flight response, 224; acute stress and, 235
FOBT. See Fecal occult blood testing
Forethought, 170
Formal theories, 26
Framework Convention on Tobacco Control (FCTC), 302
Frameworks, 359. See also Models
Framing, 329, 331, 334–335; for HPV vaccine strategies, 341–342
Friendship networks, 208
Functional social support, 186
G
GAS. See General adaptation syndrome
Gender: HBM influenced by, 79; smoking cessation strategies and, 139. See also Women
General adaptation syndrome (GAS), 224
Generality, 26
Geographic communities, 279
Goal setting, 170, 364; defined, 371; Intervention Mapping and, 368
Group interventions: action levels in, 274; adoption of external models for, 274–275; CFIR and, 272, 275; communication inequalities and, 273; Diffusion of Innovation model for, 275; dissemination models in, 275; EBIs and, 273, 275; for Ebola, 275; federal communication approach to, 275; future applications of, 275–276; historical perspectives on, 272–273; implementation models in, 275; influence levels in, 274

The Guide to Community Preventive Services, 314–315

H

HAPA. See Health Action Process Approach

HBM. See Health Belief Model

Health Action Process Approach (HAPA), 135–136; motivation in, 135; self-efficacy in, 135; volition in, 135

Health behavior, changes in: for African Americans, 13–14; at-risk status, 14–15; collaboration among professionals for, 6; through communication technologies, 9; community-based, 11–12; through consumer marketplace, 13; data systems for, 8; disciplinary influences on, over time, 10–11; disease and, 7–15; epidemiology as influence on, 6; ethnicity as influence on, 13–14; evolution of, 6; through goal setting, 364; through government involvement, 7–8; in health care settings, 12; as health-compromising, 161; as health-enhancing, 161; at home, 12; through ICTs, 13; through international agencies, 8; life cycle stage and, 14; medicine as influence on, 6; PSE initiatives, 271; in schools, 11; SCT and, 364; Self-Regulation Theory and, 364; settings for, 11–13; sociodemographic characteristics and, 13–14; for specific audiences, 13–15; strategies on, 3–4; TTM and, 364; in worksites, 12

Health behavior theory: behavior settings in, 48; change, 27; change agents, 29; in CHL program, 428–429; creation of, 33; cross-cutting propositions in, 355–356; as ecological model, 46; environmental contexts for, 48; interactions as influence in, 48; meta-theory, 29; multilevel interventions in, 49; multiple levels of influence on, 48; paradigms for, 28–30; practice as related to, 23–26; research applications for, 32–33, 34–36; trends in, 30–33; UHMG and, 432–434; variables in, 27. See also specific theories

Health behaviors, 9–10; defined, 10; downstream, 11; emotional influences on, 71; HBM as influence on, 81–83, 97; illness, 10; patient adherence to, 253; personal cognitive influences on, 162–166; practices for, 15–16; preventative, 10; research on, 5, 15–16; SCT and, 97; sick-role, 10; social support and, 195–198; Stages of Change and, 130–131; stress and, 154–155; stressors and, 223–224; TTM as influence on, 97; upstream, 11. See also Health behavior, changes in; Health behavior theory

Health behavior theory

Health care services: health behavior changes through, 12; interpersonal communication in, 256–260; perceived support and, 193; received support and, 193

Health education: government involvement in, 7–8; poverty and, 8; toward social action, 11

Health Information National Trends Survey (HINTS), 245
Health insurance: under Affordable Care Act, 12; lack of, 8; under Patient Protection and Affordable Care Act, 8–9
Health promotion practices. See Intervention Mapping; PRECEDE-PROCEED Model
Health risk assessments (HRAs), 139
Healthy Heartlands Initiative, 288
Healthy Native Communities Fellowship (HNCF), 286
Healthy Native Communities Partnership (HNCP), 286
Healthy People 2020, 14
Helping relationships, 126
Heuristic-Systemic Processing Model (HSM), 331
High monitors, 233
HINTS. See Health Information National Trends Survey
HIV. See Human immunodeficiency virus
HNCF. See Healthy Native Communities Fellowship
HNCP. See Healthy Native Communities Partnership
Homes, health behavior changes in, 12
Homophily, 208, 212
HPA axis. See Hypothalamic-pituitary-adrenal axis
HPV. See Human papilloma virus
HRAs. See Health risk assessments
HSM. See Heuristic-Systemic Processing Model
Human immunodeficiency virus (HIV), prevention strategies for, 7, 95; IBM strategies for, 107, 109–118; Intervention Mapping approach to, 366; It's Your Game. . . Keep It Real program and, 378; optimism and, 232; PMTCT and, 431; SCT and, 163; secondary appraisal for, 228; stressors and, 225; TPB and, 103; in Zimbabwe, prevention programs for, 109–118
Human papilloma virus (HPV), vaccine strategies for: framing strategies in, 341–342; HBM and, 80, 86–88; information processing in, 342; It's Your Game. . . Keep It Real program and, 378; mass communication applications, 341–342; perceived severity and, 88; perceived susceptibility and, 87; Social Cognitive Theory and, 87; TPB and, 87; TTM and, 87
Hyperbolic discounting, 393
Hypertension, 389
Hypothalamic-pituitary-adrenal (HPA) axis, 235
ICTs. See Information and communication technologies
Illness behaviors, 10; interpersonal communication and, 155–156. See also Interpersonal communication, in health and illness
Impact evaluation, 366, 377
Implementation Effectiveness Model, 305
Implementation intention interventions, 71–72
Implementation research, 304
Implementation science, 304
Incentives: in behavioral economics, 394; in weight-loss interventions, 399–401
Indian Health Service, 286
Individual perspective, for community, 279
Induction, 216
Infectious diseases, 7; stressors and, 225
Influence, in SNA: during adolescence, by peers, 214; in community interventions, 274; in group interventions, 274
Influences: in health behavior theory, 48; in interpersonal communications, 243; in organizational interventions, 274; for physical activity, 53–54; in SNA, 48, 208–209; in Theory of Triadic Influence, 46; on tobacco use, by peers, 214
Information and communication technologies (ICTs), 13. See also Internet
Information management, 249, 252
Information processing: defined, 371; in HPV vaccine strategies, 342; in PRECEDE-PROCEED Model, 362; in social marketing, 415; theories for, 330–331, 371
Information seeking, 227; blunters and, 233; monitors and, 232–233
Informational social support, 168, 186, 189
Informed by theory, 33
Innovation knowledge translation, 304
INSNA. See International Network for Social Network Analysis
Instrumental attitude, 105
Instrumental support, 168

Insurance. See Health insurance

Integrated Behavioral Model (IBM), 68–69, 104–118; application of, 70–71; challenges to, 71–72; components of, 104; constructs for, 101–102; for contraception use, 107; definitions for, 101–102; elicitation phase for, 107–109; experiential attitude and, 105; in HIV prevention strategies, 107, 109–118; individual changes in, 356; instrumental attitude and, 105; intention-behavior relationships in, 68; intentions and, 70, 105, 115–116; in interpersonal communications, 258; for mass communication, 330; measurement tools for, 70; Model of Goal-Directed Behavior and, 72; personal agency in, 106; self-efficacy in, 70, 118, 152; in STD prevention, 107; theoretical framework for, 118–120

Integrative Model. See Integrated Behavioral Model

Intention-behavior relationships, 68

Intentions, behavioral: in CATCH case study, 173; in HBM, 70; IBM and, 70, 105, 115–116; identification of beliefs and, 114; implementation intention interventions, 71–72; in SCT, 170; in TRA, 70, 97; in Zimbabwe HIV prevention programs, 113–114

Interactions: across ecological models, 54; health behavior theory influenced by, 48

Internalities, 393

Social Learning Theory, 30; as ecological model, 46; social role models and, 159; UHMG and, 432; updated review of, 32
Social liberation, 127
Social marketing, 354–355; audience characteristics in, 413; audience segmentation in, 418; basic principles of, 414–418; behavior as focus of, 414; branding and, 419; for CHL, 424–429; commercial marketing compared to, 413; competition in, 415; consumer orientation and, 415; consumer-driven approaches to, 419–420; defined, 412–414; design phase of, 423; Diffusion of Innovations theory and, 354, 420–421; downstream focus in, 415; EPPM and, 421–422; evaluation phase of, 423; extended parallel processing model, 354; flow of information in, 415; historical development of, 412; implementation of, 423–424; international applications for, 424–434; locus of benefits and, 413–415; long tail in, 417; market-driven approaches to, 420; outcomes in, 413; place of consumer in, 416–417; price in, 416; product in, 415–416; product-driven approaches, 419; promotion in, 417; research in, 420–424; ROI and, 424; SCT and, 415; strategic communication frameworks for, 418–420; theory in, 420–424; TPB and, 421; TRA and, 419; transformative, 412, 415; for UHMG, 424, 429–434; upstream focus in, 415; voluntary exchanges in, 413
Social network analysis (SNA), 153–154; adolescent tobacco use and, 213–215; alterations in, 216; applications of, 212–216; betweenness centrality in, 209; big data and, 207; bridging individuals in, 209; closeness centrality in, 209; clustering in, 210; for contraception use in developing countries, 212–213; degree centrality in, 209; Diffusion of Innovations theory and, 205; ERGMs and, 215; friendship networks, 208; for contraception use in developing countries, 212–213; development of concepts within, 207; ERGMs and, 215; friendship networks, 208; historical development of, 206–207; identification of individuals in, 216; individual position in, 209; induction in, 216; Internet resources and, 217–218; interventions using, 216–217; network environment, 207–209; network statistics, 215–216; predictions through, 207–208; purpose of, 205; SAB models, 215–216; segmentation in, 216; social ties and, 154; structures of, 210–212; TPB and, 212; TRA and, 212; transitivity in, 210
Social network models, 333
Social network theory (SNT), 153; adolescent tobacco use and, 213–215; alterations in, 216; applications of, 212–216; big data and, 207; components of, 207; for contraception use in developing countries, 212–213; development of concepts within, 207; ERGMs and, 215; friendship networks, 208; historical development of, 206–207; identification of individuals in, 216; individual position in, 209; induction in, 216; Internet resources and, 217–218; interventions using, 216–217; network environment, 207–209; network statistics, 215–216; predictions through, 207–208; purpose of, 205; SAB models, 215–216; segmentation in, 216; structure for, 207
Social networks, 183–184; applications of, 205; centralized, 210
Social outcome expectations, 165
Social persuasion, 163–164
Social products, 414
Social Readjustment Rating Scale (SRRS), 224
Social role models, 159
Social support: alcohol abuse and, 192–193; belonging, 186; CHD and, 191; conceptualizations of, 183–186; in coping efforts, 229, 233–234; definitions of, 183–186; for diabetic control, 196–197; direct effect models for, 187–190; emotional, 168, 186, 189; functional, 186; future research on, 156–157, 198–199; in health behavior applications, 195–198; health effects of, empirical evidence for, 190–193; historical perspectives for, 186–187; informational, 168, 186, 189; invisible, 153; matching hypothesis model, 188–189; measurement approaches to, 246; models of, 152–153; mortality risks and, 191–193; negative, 234; perceived, 153, 185, 193; received, 153, 185, 193; relationship quality and, 194; SCT and, 185; self-efficacy through, 163–164; for smoking cessation strategies, 197–198; stress prevention model, 188–190; stress-buffering models for, 187–190, 233; tangible, 186, 189; through technology, 157, 194–195; theoretical models for, 187–190;
in Transactional Model of Stress and Coping, 229; types of, 168
Social systems perspective, for community, 278–279
Social ties, 154
Socioeconomic status (SES): coping styles influenced by, 236; health disparities and, 234; knowledge gap hypothesis and, 337; stress and, 155
Socioenvironmental cognitive factors, 160–162
Sociometry. See Social network analysis
SPARK. See Sports, Play, and Active Recreation for Kids program
Sports, Play, and Active Recreation for Kids (SPARK) program, 309
SRRS. See Social Readjustment Rating Scale
Stages of Change: action stage, 126, 128; applied studies for, 133–134; contemplation, 126; decisional balance in, 127, 129; distribution of, 130; across health behaviors, 130–131; maintenance, 126, 128; precontemplation, 126–127; preparation, 126–128; principles of, 128–129; principles of progress in, 131; processes of, 128–129, 131–132; self-efficacy, 127, 129; Social Cognitive Theory and, 129; temptation, 129; termination, 126, 128; as theory, 30
Stakeholder theories, 363
Status quo bias, 398
Sticky knowledge model, 305
Stigma theory, 371
Stimulus control, 127
Stimulus-Response Theory, 76; punishment in, 170–171; reinforcement in, 170–171
STIs. See Sexually transmitted infections
Stochastic actor-based (SAB) model, 215–216
Stockholm Female Coronary Risk Study, 194
Stress: accumulation hypothesis for, 154–155; acute, 235; AIDS and, 225; allostatic load perspective for, 231, 235; biological dispositions toward, 225; biopsychosocial perspective on, 235; cancers and, 225; childhood exposures to, 225; childhood factors for, 236; coping adaptations, 154–155; defined, 223; disease and, 225; epidemiological dispositions toward, 225; fight-or-flight responses to, 224; GAS and, 224; health behaviors and, 154–155; historical concepts of, 224–226; HIV and, 225; HPA axis, 235; human physiology and, 235; infectious diseases and, 225; occupational, 224–225; under Patient Protection and Affordable Care Act, 236; personality dispositions toward, 225; RCTs for, 236–237; research applications for, 231, 236–238; resilience and, 223; SES and, 155; SNS and, 235; social support as buffer, 188–189; SRRS and, 224; transactional model for, 224, 226–235; worksite, 12
Stress prevention model, 188–190; empirical evidence for, 189–190
Stress-buffering models, for social support, 187–188; empirical evidence for, 189–190; stress and, 233
Stressors, 188–189; AIDS and, 225; cancers and, 225; chronic exposure to, 225; defined, 223; health behaviors influenced by, 223–224; HIV and, 225; infectious diseases and, 225
Structural-Ecological Model, 46
Subjective normative beliefs, 27
Substance abuse, 126; CFIR and, 313–314; present bias and, 395
Sun protection strategies, 95, 126
Survivorship, 251
Susceptibility: primary appraisal of, 227. See also Perceived susceptibility, in HBM
Sympathetic nervous system (SNS), 235
System Theory, 46

T

Tangible social support, 186, 189
Technology: computers, 246–247; interpersonal communication through, 246–247; social support through, 157, 194–195
Temptation, 129
Termination stage, 126, 128
Tested theory, 33
The Power of Collaborative Solutions, 294
Theoria, 23
Theories of action. See Change theories
Theory: assessment criteria, 34–35; for CHL program, 428–429; concepts in, 27; constructs in, 27; defined, 26–27; explanatory, 26–27; models in, 28; paradigms for, 28–30; principles in, 28; purposes of, 26; in social marketing, 420–424; variables in, 27
Theory of Planned Behavior (TPB), 30; for AIDS risk behaviors, 69; analytic approaches to, 102–103; application of, 70–71; challenges to, 71–72; components of, 97–103; constructs for, 101–102; contraception use and, 95; control beliefs
and, 98, 100; defined, 371; definitions for, 101–102; elicitation phase for, 107–109; evidentiary support for, 103; for HIV interventions, 103; HPV vaccination strategies and, 87; intention-behavior relationships in, 68; measurement tools for, 70, 99–102; Model of Goal-Directed Behavior and, 72; normative beliefs and, 97, 100; origins of, 96–97; perceived control in, 97–98; perceived risk and, 69; research design for, 102–103; self-efficacy in, 70, 118, 152; SNA and, 212; social marketing and, 354, 421; theoretical framework for, 118–120; updated review of, 32. See also Integrated Behavioral Model

TRA. See Theory of Reasoned Action

Transactional Model of Stress and Coping: benefit finding in, 227, 229; coping efforts in, 229–230; definitions in, 227; emotional regulation in, 227, 229; extensions to, 231; information seeking in, 227, 232–233; optimism in, 227, 231–232; primary appraisal in, 226–228; problem management in, 227, 229; research applications for, 236–238; secondary appraisal in, 227–229; social support in, 229, 233–234

Transformative social marketing, 412, 415

Transitivity, 210

Transportation theory, 152

Transtheoretical Model (TTM), 33; age and, 141; application of, 70–71; applied studies for, 133–135; challenges with, 71–72; comparative outcomes with, 140; core constructs of, 126–127; critical assumptions of, 129–130; culture and, 141; defined, 371; with diverse groups, outcomes for, 139; empirical support for, 130–135; extensions for, 228; future research with, 142–143; health behavior changes with, 364; health behaviors influenced by, 97; health interventions with, 25, 141; HPV vaccination strategies and, 87; individual changes in, 356; in interpersonal communications, 258; intervention programs and, 25; limitations of, 141; Model of Goal-Directed Behavior and, 72; PRECEDE-PROCEED Model and, 353; processes of change in, 69–70; RCTs and, 139–141; self-efficacy in, 70, 127; in smoking cessation programs, 34, 126, 136–139; stage distribution and, 130; tailored interventions with, 141; as theory, 30–31. See also Stages of Change

Treatment strategies, interpersonal communication in, 247, 249–250

Trust, 244

TTM. See Transtheoretical Model

Tuberculosis, 7

U

Uganda Health Marketing Group (UHMG), 424; ACT treatments and, 430; audience segmentation by, 432; behavior as focus of, 429–430; consumer benefits and, 430; location considerations for, 431; market focus for, 430; media campaigns, 431; PMTCT and, 431; price considerations for,
431; product availability for, 430–431; promotion issues for, 431; RDT kits and, 430; Social Learning Theory and, 432; use of behavior theory, 432–434; use of research for, 432–434
Uncertainty management, 252; theories for, 258
Unhealthy behaviors, mortality influenced by, 4–5
United States (U.S.): Affordable Care Act in, 12; ecological models in, 56; health education in, 7–8; Patient Protection and Affordable Care Act in, 8–9. See also African Americans
