1 Setting the Context for Evaluating Sustainable Development 1
   The environmental perspective 1
   The international policy debates 5
   Extension of the debate 12
   The impact of the built environment 13
   The current response of the built environment community 16
   Sustainability: a definition 20
   Seeking a shared set of values 22
   Striving for a common framework and classification system 24
   The characteristics of assessment and measurement for sustainable development 25
   Management and intervention for sustainable development 30
   Implementing management decisions 32
   Summary 33
## Contents

### 2 Time and Sustainability 35
- Innovation and stability 37
- Perceptions of sustainable development 38
- Critical failure points 42
- Time in evaluation 47
- Future aversion 48
- Clever or wise? 50
- Practical assessment of ‘time’ 50
- The luxury of the ‘time’ horizon 52

### 3 Approaches to Evaluation 54
- The Natural Step 55
- The concept of community capital 58
- The ecological footprint 61
- Monetary (capital) approach 64
- The driving force-state-response model 65
- Issues or theme-based frameworks 66
- Accounting frameworks 67
- Frameworks of assessment methods’ tool kits 67
- Summary and conclusions 70

### 4 Indicators and Measures 73
- Why evaluate? 73
- Traditional versus sustainable development indicators 75
- Generic and specific questions 78
- International indicators 80
- Aggregated indicators 82
- Discussion 84
- Summary 87

### 5 Assessment Methods 89
- A directory of assessment methods 91
- An outline summary of the main assessment methods, tools and procedures in use 96
- Summary and conclusions 118
6 A Proposed Framework for Evaluating Sustainable Development

The need for a holistic and integrated framework
The theoretical underpinning of the framework
The built environment explained by the modalities
The 15 modalities for understanding sustainable development in the built environment
Development of the multi-modal framework for decision-making
Key questions for examining sustainable development within each modality
Synthesis of results
Summary

7 The Framework as a Structuring Tool: Case Studies

Case study 1: selection of a municipal waste treatment system
Case study 2: evaluation of sustainable redevelopment scenarios for an urban area
Case study 3: ‘multi-stakeholder’ urban regeneration decision-making
Case study 4: social reporting of Modena City strategic plan
Summary and conclusion

8 Towards Management Systems and Protocols

Who manages?
The planning framework
Management in a learning organisation
Soft system methodology
Wicked problems
Process protocols
A possible approach
The Vancouver study
The conclusions of the Vancouver study
Follow through on the Vancouver study
Resilience
