from PTL formulae, 31

Classical logic
first-order, see First-order logic
intuition, 269
propositional, see Propositional logic

Clausal resolution, 86, 279
binary resolution, 280
first-order logic, 295, 302
first-order substitution, 299
hyperresolution, 283
input resolution, 285
linear resolution, 285
logic programming, 304
ordered resolution, 113, 283
refutation, 279
resolution rule, 279
set of support, 282
temporal, see Clausal temporal resolution
unit resolution, 284

Clausal temporal resolution, 86
implementation, see TSPASS System
overview, 87
step resolution, see Step resolution
temporal resolution, see Temporal resolution

CNF
first-order, 297
propositional, 278

Communication between programs
broadcast, 62
channels, 77
message-passing, 62
multicast, 62
shared variables, 76

Computational complexity
model checking, 42
validity, 42

Concurrency
asynchronous execution, 61
interleaving, 61
synchronous execution, 61
ture concurrency, 61

Concurrent MetateM System, 211
basic invocation, 212
beliefs, 234
benefits and drawbacks, 233
communication, 219
concurrency, 219

content and context, 227
deliberation, 222
embedded Java, 226
meta-level control, 222
multi-agent systems, 219
organizations, 230
rule syntax, 216
theory, see Temporal execution, MetateM

CTL, see Branching temporal logic, CTL
CTL*, see Branching temporal logic, CTL*

Deduction, 86
automation, 270

DNF
propositional, 278

Executable temporal logic, see Temporal execution

Finite-State Automata
accepting finite strings, 30
accepting infinite strings, see Büchi Automata
product, 30

First-order logic
clausal resolution, see Clausal resolution, first-order logic
conjunctive normal form, see CNF, first-order
correctness, 295
Horn Clauses, 304
inference rules, 293
interpretation, 291
intuition, 288
logic programming, 304
monadic predicates, 291
most general unifier, 301
semantics, 291
simplification, 296
skolemization, 297
syntax, 289
unification, 300
variable assignment, 291

First-order temporal logic, monodicity, 44
program semantics, 58
QPTL, 43
specification of parameterized systems, 256

Fixpoint temporal logic, 40
νTL, 41
fixpoints, 40
temporal, see Temporal logic, Horn Clauses

Horn Clauses
first-order, see First-order logic, Horn Clauses
propositional, see Propositional logic, Horn Clauses
rule interpretation, 287
temporal, see Temporal logic, Horn Clauses

Induction principle, 26

Interval temporal logic
Allen’s Interval Algebra, 262
execution
Tempura, 238
Tokio, 240
granularity, 45, 261
ITL, 45
execution, see Interval temporal logic, execution structures, 45, 260

Kripke Structures, 14, 38, 246

Linear temporal logic
first order, see First-order temporal logic
propositional, see PTL

Modal logic
belief, 250
knowledge, 246
semantics, see Kripke Structures

Model checking, 138
abstraction, 176
predicate abstraction, 177
refinement (CEGAR), 179
under approximation, 177
agent programs, 246
automata-theoretic view, 135
bounded search, see Bounded model checking
