## Contents

Foreword by Jan Bosch xi
Foreword by Antero Taivalsaari xv
Preface xvii
Acknowledgments xxi

### 1 Introduction 1

1.1 Motivation 1
  1.1.1 Leaking Abstractions 1
  1.1.2 Allocation Responsibility 3
1.2 Commonly Used Hardware and Software 4
  1.2.1 Computing Hardware 5
  1.2.2 Low-Level Software Infrastructure 13
  1.2.3 Run-Time Infrastructure 14
  1.2.4 Software Stack 20
1.3 Development Process 21
1.4 Chapter Overview 23
1.5 Summary 25
1.6 Exercises 25

### 2 Memory Management 27

2.1 Overview 27
2.2 Strategies for Allocating Variables to Memory 27
  2.2.1 Static Allocation 28
  2.2.2 Stack 28
  2.2.3 Heap 30
2.3 Design Patterns for Limited Memory 31
  2.3.1 Linear Data Structures 31
  2.3.2 Basic Design Decisions 32
  2.3.3 Data Packing 34
  2.3.4 Discussion 36
2.4 Memory Management in Mobile Java 37
   2.4.1 Motivation 37
   2.4.2 Rules of Thumb for Mobile Java 39
2.5 Symbian OS Memory Management 42
   2.5.1 Naming Conventions 43
   2.5.2 Descriptors 45
   2.5.3 Exceptions 46
   2.5.4 Combining Exceptions and Allocation 48
   2.5.5 Cleanup Stack 49
   2.5.6 Two-Phase Construction 52
   2.5.7 Factory Methods for Two-Phase Construction 54
   2.5.8 Using Symbian Conventions 55
2.6 Summary 57
2.7 Exercises 58

3 Applications 61
3.1 What Constitutes an Application? 61
3.2 Workflow for Application Development 62
   3.2.1 Scoping 63
   3.2.2 Performance Considerations 63
   3.2.3 User Interface Design 64
   3.2.4 Data Model and Memory Concerns 65
   3.2.5 Communications and I/O 65
3.3 Techniques for Composing Applications 66
   3.3.1 Event-Based Programming 67
   3.3.2 Model-View-Controller as the Application Architecture 68
   3.3.3 Auxiliary Files 70
   3.3.4 Managing Applications 71
   3.3.5 Practicalities 73
3.4 Application Models in Mobile Java 73
   3.4.1 Configurations 74
   3.4.2 Profiles 76
   3.4.3 Sample MIDP Java Application 80
3.5 Symbian OS Application Infrastructure 84
   3.5.1 Overview 85
   3.5.2 Resource File 86
   3.5.3 Attaching Application to Run-Time Infrastructure 88
   3.5.4 Application 89
   3.5.5 Document 91
   3.5.6 User Interface 93
   3.5.7 View 96
4 Dynamic Linking

4.1 Overview
  4.1.1 Motivation
  4.1.2 Release Definition Using Dynamically Linked Libraries
  4.1.3 Required Implementation Facilities
  4.1.4 Static versus Dynamic DLLs
  4.1.5 Challenges with Using DLLs

4.2 Implementation Techniques

4.3 Implementing Plugins
  4.3.1 Plugin Principles
  4.3.2 Implementation-Level Concerns

4.4 Managing Memory Consumption Related to Dynamically Linked Libraries
  4.4.1 Memory Limit
  4.4.2 Interface Design Principles
  4.4.3 Merging Elements

4.5 Rules of Thumb for Using Dynamically Loaded Libraries

4.6 Mobile Java and Dynamic Linking

4.7 Symbian OS Dynamic Libraries
  4.7.1 Standard Structure of Dynamically Linked Libraries
  4.7.2 Managing Binary Compatibility
  4.7.3 ECOM Component Model

4.8 Summary

4.9 Exercises

5 Concurrency

5.1 Motivation

5.2 Infrastructure for Concurrent Programming
  5.2.1 Threading
  5.2.2 Inter-Thread Communication
  5.2.3 Common Problems

5.3 Faking Concurrency

5.4 MIDP Java and Concurrency
  5.4.1 Threading in Virtual Machine
  5.4.2 Using Threads in Mobile Java
  5.4.3 Problems with Java Threading
5.5 Symbian OS and Concurrency 135
  5.5.1 Overview 135
  5.5.2 Sample Active Object 141
  5.5.3 Active Objects and Applications 145
  5.5.4 Problems with Active Objects 145
5.6 Summary 146
5.7 Exercises 147

6 Managing Resources 149

6.1 Resource-Related Concerns in Mobile Devices 149
  6.1.1 Overview 149
  6.1.2 Grouping Resource Managers 151
  6.1.3 Separating Resource Managers 152
  6.1.4 Resource-Hosting Virtual Machine 155
6.2 Common Concerns 156
  6.2.1 Overview 156
  6.2.2 Extension and Adaptation 156
  6.2.3 Performance 158
  6.2.4 Energy Management 159
  6.2.5 Internal Resource Management 160
6.3 MIDP Java 161
  6.3.1 Basic Elements 162
  6.3.2 Compatibility between Different Devices 164
6.4 Symbian OS 165
  6.4.1 Servers as a Mechanism of Resource Management 165
  6.4.2 Implementing Servers 167
  6.4.3 Adapting Servers to Hardware 171
  6.4.4 Problems with Servers 173
6.5 Summary 173
6.6 Exercises 174

7 Networking 177

7.1 Introduction 177
  7.1.1 Basic Connectivity 177
  7.1.2 Stateful and Stateless Systems 178
  7.1.3 Infrastructure Assisted or Ad-hoc Networking? 180
7.2 Design Patterns for Networking Environment 181
7.3 Problems with Networking Facilities and Implementations 184
7.4 MIDP Java and Web Services 185
  7.4.1 Web Services Overview 185
  7.4.2 Using Web Services with Mobile Java 187
