Index

Note: Page numbers in *italic* denote figures, those in **bold** denote tables.

acid casein, 328, 329
acids, sugar processing value-added products, 521
activated carbon, 80
sugar processing value-added products, 526
vegetable waste, 78–79
ADF see antioxidant dietary fiber, 80
agar, seafood by-product, 423
agroindustry by-products bioactive compounds, 90–96 polysaccharides, 155–164
alcalase, protein extraction, 281–284
alcoholic beverages, beverage industry waste, 299–304
alcoholic fermentation, guava and by-products, 37–38

alkali source, banana peel, 202
alpha-amylase banana peel, 199–200 soybean, 260
alpha-galactosidases soybean, 261 soybean vinasse, 268
alpha-lactalbumin (α-LA), 331
amylase, industrial production, 123 angiotensin I-converting enzyme (ACE) inhibition, fish protein hydrolysates, 445
anhydrous milk fat, 340
anhydrous milk fat fractionation, 340
animal by-product protein source, tilapia diets, 486–489
animal by-products, 96–103
animal feed see also livestock fodder beet sugar, 519–521 cane sugar, 520–521 carrot pomace powder (CPP), 223 food waste regulation and legislation, 537 pineapple, 34 regulation and legislation, 537 sugar processing value-added products, 519–521 vegetable waste, 78–79

*Food Processing By-Products and their Utilization*, First Edition. Edited by Anil Kumar Anal. © 2018 John Wiley & Sons Ltd. Published 2018 by John Wiley & Sons Ltd.
animal origin ingredients, catfish diets, 480–481
anthocyanins, 13–14
antibacterial effects, honey, 313–314
anticancer activities, fish protein hydrolysates, 444–445
anti-desiccants, sugar processing value-added products, 523
antihypertensive activity, bioactive peptides, 383–384
anti-inflammatory effects, honey, 316–317
antimicrobial activity, bioactive peptides, 385–386, 387
antimicrobial peptides, marine by-products, 125, 126
antioxidant dietary fiber (ADF), 115
antioxidant effects, honey, 314–316
antioxidant properties, dietary fibers, 114
antioxidants
astaxanthin from crustacean shell, 102–103
banana peel, 197, 198
papaya seeds as antioxidants, 41
soybean by-products, 269–270
antioxidative activity, bioactive peptides, 384–385, 387
antioxidative properties, fish protein hydrolysates, 443–444
antiviral effects, honey, 316
apple, 4, 17
bioactive compounds, 90–92
aquaculture, 417–426
overview, 471–472
aquaculture diets, 471–491
Cichlidae, 473–474
fishmeal, 472–473
food industry by-products, 471–491
protein replacement, 471–491
Siluridae, 473
aquaponics, vegetable waste, 78
aquatic plants, 424–425
aromas, sugar processing value-added products, 524–525
Asian region, food waste regulation and legislation, 544
asparagus, polyphenols, 65
astaxanthin
crustacean shell, 102–103
marine cosmeticals, 461
seafood by-product, 424, 445–447
skincare, 461
bagasse, 509–515
agglomerated products production, 513–515
energy production, 527
paper production, 513
pulp and paper production, 509–515
pulp production, 512–513
baked goods, soybean by-products, 263
bakery industry, guava and by-products, 38
baking products, from fruit by-products, 20
banana, 3, 18
banana peel, 195–203
alkali source, 202
alpha-amylase, 199–200
antioxidants, 197, 198
bioactive components, 199
bioactive compounds, 196–199
bioethanol, 202
biogas, 203
chemical properties, 196–199
composition, 197
dietary fiber concentrate, 199
feed utilization, 201
flavonoids, 197–198
industrial utilization, 195–203
lipase, 200
micronutrients, 198–199
nutrients, 196–197
phytochemicals, 197
polyphenols, 197–198
sustainability, 201–202
utilization, 199–203
wine, 201
wine vinegar, 200–201
xylose, 200
yellow noodles, 199
Basa fish, by-products, 442
BBI see Bowman-Birk inhibitor
beans, loss quantification, 60
beef and pork meat processing, 395–411
see also chicken meat and egg
processing; meat and poultry
processing,
bioactive peptides, 404–405
biodiesel, 405–407
blood, 400
blood products, 403–404
bones, 398
collagen, 401–402
gelatin, 402–403
hides, 398–399
hoofs, 398–399
horn, 399–400
eratin, 407–411
lard, 400
by-products, 396–401
skin, 397–398
value-added products, 401–411
viscera, 401
waste utilization, 396–401
beer production, 299–302
beetroot
loss quantification, 60
polyphenols, 65
beet sugar, animal feed, 519–521
berries, bioactive compounds, 92
beta-glucans, 155–158
health benefits, 157–158
manufacture, 157
solubility, 155–156
sources, 155–157
structure, 155–157
betalains, vegetable waste, 69–70
beverage industry waste
alcoholic beverages, 299–304
beer production, 299–300
brewing industry
by-products, 300–302
coffee by-products, 296–298
fruit juice, 299
soft drinks, 299
tea processing wastes, 298–299
value addition, 295–305
wine production
by-products, 302–304
beverages, soybean, 249
bioactive components, banana peel, 199
bioactive compounds
agroindustry by-products, 90–96
apple, 90–92
banana peel, 196–199
berries, 92
carrot, 64–65, 94
cauliflower, 94–95
citrus fruits by-products, 93
Enzyme Assisted Extraction
(EAE), 72–73
extraction from vegetable
waste, 64–66, 70–73
fruit by-products, 90–94
fruit pomace, 92
fruits, 90–94
grape, 93
honey, 309–317
increment in vegetables, 66–67
mango, 93–94
Microwave Assisted Extraction
(MAE), 72
olives, 95–96
onion, 95
phenolic compounds, 67–69
polyphenols, 65
potato, 95
Pressurized Fluid Extraction
(PFE), 71
Pulsed Electric Field Extraction
(PEF), 72
Solid Liquid Extraction (SLE), 70–71
Soxhlet Extraction (SE), 71
stimulators, 67–70
supercritical fluid extraction
(SFE), 71
tomato, 95
Ultrasound Assisted Extraction
(UAE), 71–72
vegetable waste, 64–67, 94–96
bioactive peptides
antihypertensive activity, 383–384
antimicrobial activity, 385–386, 387
antioxidative activity, 384–385, 387
applications, 386–387, 404–405
team and pork meat
processing, 404–405
characterization, 382–383
chemical methods of
hydrolysis, 380–381
bioactive peptides (continued)
  chicken meat and egg processing, 380–387
  enzymatic hydrolysis, 381–382
  extraction, 380–382, 404–405
  fish protein hydrolysates, 100
  functional food development, 386
  functionalities, 383–386
  functional properties, 404–405
  microbial fermentation, 381
  purification, 382–383
  seafood by-products, 447–448, 449
biochar
  sugar processing value-added products, 525–526
  vegetable waste, 76, 77
biodegradable plastic
  sugar processing value-added products, 523–524
  vegetable waste, 80
biodiesel
  applications, 407
  beef and pork meat processing, 405–407
  characterization, 406–407
  extraction, 406–407
bioethanol
  banana peel, 202
  carrot pomace powder (CPP), 222
  pineapple, 30
  soybean molasses, 268–269
biofertilizers, 175–187
  cassava processing by-product, 184–185
  castor husks, 181–182
  castor meal, 181–182
  coffee by-products, 183
  cuphea oil, 179–180
  food processing industrial sludge, 182
  jatropha by-products, 180
  oilseed by-products, 179–182
  olive oil mill by-products, 180–181
  rice bran, 182–183
  rice straw, 182–183
  soybean meal (SBM), 181
  spent bleaching earth (SBE), 180
  sugarcane by-products, 178–179
  sugar processing value-added products, 525–526
  tea processing wastes, 183–184
  turmeric solid waste, 184
bio-filters, sugar processing value-added products, 528
biofuel, vegetable waste, 76, 77
biogas
  banana peel, 203
  carrot pomace powder (CPP), 224
  pineapple, 31
  sugar processing value-added products, 527
  vegetable waste, 63–64
biomedicine, seafood by-products, 442–457
biopesticides, 175–176, 185–187
  cuphea oil, 185–186
  jatropha oil, 186
  maize gluten meal, 185
  olive compounds, 186–187
  plant extracts, 187
  rotenone, 187
biopolymers
  seafood, 7
  sugar processing value-added products, 523–524
biscuits, carrot pomace powder (CPP), 216
blood, 5, 96–98
  beef and pork meat processing, 400
  chicken, 371
blood meal (BM), tilapia diets, 487–488
blood products
  applications, 404
  beef and pork meat processing, 403–404
  characterization, 404
  extraction, 404
BM see blood meal
bones, 5
  beef and pork meat processing, 398
  chicken, 371
Bowman-Birk inhibitor (BBI)
  anticarcinogen, 255–256
  soy-containing diets, 252, 255–256
brandy, 304
brewer’s spent grain (BSG), 300–301
catfish diets, 479
brewing industry by-products, 300–302
brewer’s spent grain (BSG), 300–301
INDEX 553

residual yeast, 302
spent hops, 301–302
tilapia diets, 491
brinjal, polyphenols, 65
broccoli
  loss quantification, 59
  polyphenols, 65
bromelain
  ethanol precipitation, 32
  High-Speed Counter-Current Chromatography, 32
  pineapple, 31–32
  Reverse Micellar Extraction (RME), 31–32
BSG see brewer’s spent grain
butanol, 518
butter, 339
buttermilk, 336

cabbage, 5
  see also red cabbage; white cabbage
  loss quantification, 59
  caloric reduction, soy products, 245–246
cane sugar
  animal feed, 520–521
  production, 509–511
canola seed meal, catfish diets, 476
capsicums
  loss quantification, 60
  polyphenols, 65
carboxymethyl cellulose (CMC), papaya and by-products, 44
carotenoids
  healthcare patents, 428–430
  vegetable waste, 69–70
carotenoprotein, seafood by-products, 445–447
carrageenan, seafood by-product, 423
carrot, 4, 208
  bioactive compounds, 64–65, 94
  dietary fibers, 116
  loss quantification, 60
  nutritional composition, 208, 209–210
  polyphenols, 65
  processing, 208
  varieties, 208, 211
carrot by-products, 212
  functional value, 224–225
  medicinal value, 224–225
  nutritional value, 224–225
carrot pomace, 212–225
gazrella (carrot-based condensed milk product), 213
carrot pomace powder (CPP), 213–216
  animal feed, 223
  bioethanol, 222
  biogas, 224
  biscuits, 216
  citric acid production, 223
  composting, 224
  cookies, 216
  dietary fibers, 222
  extrudates, 218–222
  fish sausage, 218
  functional components, 222–223
  value-added products, 216–224
  wheat bread, 217–218
  wheat rolls, 217
  caseinate, 329, 330
  caseins, 326
  casein-whey protein co-precipitate, 328, 329
cassava processing by-product, biofertilizers, 184–185
castor husks, biofertilizer, 181–182
castor meal, biofertilizer, 181–182
catfish diets
  animal origin ingredients, 480–481
  brewer’s spent grain (BSG), 479
  canola seed meal, 476
cereal by-products, 478–479
cotton seed meal (CSM), 477
distillers’ dried grains, 479
fermented fish silage (FFS), 481
fish meal, 480–481
fishmeal alternatives, 475–482
groundnut cake, 476
immuno-modulation, 482
mushroom by-product, 482
oil seed cakes, 475–478
oilseed meals, 477–478
sesame seed meal, 476
sunflower cake, 476–477
sunflower seed meal, 476–477
yeast-derived protein source, 482
cauliflower
  bioactive compounds, 94–95
dietary fibers, 115
loss quantification, 59
celery, polyphenols, 65
cellulase, pineapple, 32
cellulose
  carboxymethyl cellulose (CMC), 44
dietary fibers, 112
hemicelluloses, 19, 112
natural cellulose fibers, soybean straw, 267
cereal-based products, soybean, 248–249
cereal by-products, 2–3
catfish diets, 478–479
dietary fibers, 117–118
char, sugar processing value-added products, 525–526
cheese alternatives, soy-foods, 259
cheese processing by-product meal (whey powder), tilapia diets, 491
chicken meat and egg processing
  see also beef and pork meat processing; meat and poultry processing
bioactive peptides, 380–387
blood, 371
bones, 371
collagen, 367–368, 372–374
eggshell, 372
eggshell membrane (ESM), 6, 372, 387–388
egg waste valorization, 387–388
feathers, 370–371
feet, 371–372
gelatin, 374–376
keratin, 376–377
peptides, 372–387
plasma proteins, 378–380
production statistics, 368
by-products, 369–372
proteins, 372–387
skin, 371
trachea, 371
value-added products, 367–388
waste utilization, 369–372
chitin
  healthcare patents, 426–428
  seafood by-product, 7, 101–102, 422, 426–428, 452–454
chito-oligosaccharide (COS), 146–148
chitosan
  healthcare patents, 426–428
  seafood by-product, 101–102, 422, 426–428, 452–454
cholesterol-lowering effect, soy-containing diets, 255
cholesterol reduction, milk fats, 339–340
chondroitin sulfate (CS), 450
chromatographic method, essential fatty acids, 128
chromatography, milk proteins, 328
Cichlidae, aquaculture proteins, 328
citric acid
  pineapple, 33
  vegetable waste as substrate, 80–81
citric acid production
  carrot pomace powder (CPP), 223
  okara, 269
  vegetable waste, 80–81
citrus fruits by-products, 15–16
bioactive compounds, 93
dietary fibers, 115, 116, 119
flavonoids, 16
CMC see carboxymethyl cellulose
cocoa, dietary fibers, 118
codes of conduct, food waste, 540
coffee, dietary fibers, 118
coffee by-products, 296–298
biofertilizers, 183
value-added products, 296–298
coffee processing, 295–296
collagen
  applications, 373–374, 402, 456–457
  beef and pork meat processing, 401–402
bioactive properties, 373
characterization, 373, 401–402
chicken meat and egg processing, 367–368, 372–374
extraction, 373, 401–402
fish skin and bones, 101
functional properties, 373, 402
