Page references followed by fig indicate an illustrated figure: followed by t indicate a table.

A
Access control case study, 316
Access control list, 315–316
Accountability: for completion of system acquisition, 185–187; HIPAA Privacy Rule on, 292; of investment for IT-enabled value delivery, 236–237 fig; IT budget development grounds rules for, 444–445
Accounts payable systems, 68
Accreditation: CMS approved accrediting organizations, 329; CQMs and eCQMs required for, 337–340; denial of, 331; description of, 327, 329, 331; examining, 324; organizational benefits of, 330; types of, 331. See also National Committee for Quality Assurance (NCQA); The Joint Commission
Accreditation organizations (AOs), 329
Accreditation with follow-up survey, 331
Accredited Standard Committee (ASC), 362
ACO models: commercial, 105, 106; Medicaid ACOs, 106; Medicare Shared Savings Program (MSSP), 105, 106; Pioneer ACO, 105, 106
ACO processes: examining PHM goals accomplished through, 108–109; identifying, assessing, stratifying, and selecting target populations, 109; managing contracts and financial performance, 110–111; measuring, predicting, and improving performance, 111–112; preparation and automation is key, 112; providing high-quality care and care management interventions, 109–110
ACOs (accountable care organizations): challenges facing, 105; description of, 13, 14; key attributes and broad results of ACO models, 106; patient-centered medical home (PCMH) and, 102–104; progress to date on, 104–105. See also Population health management (PHM)
Ad hoc standards, 360
Administrative data, 335
Administrative information systems: common types of, 68; description and content of, 67
Admission, discharge, transfer (ADT): description of, 68; Jones Regional Medical Center case study on crashing system, 506–507
Advisory Board, 225
Advocate Health Care, 303
Affordable Care Act (ACA) [2010]: impact on population health by, 32; National Quality Strategy established by, 345–347; overview of the, 12
Agency for Healthcare Research and Quality (AHRQ), 109, 110, 113, 204, 337, 342, 345–346
AHRQ National Resource Center for Health IT, 143
ALS Association, 125
ALS Ice Bucket Challenge, 125
ALS survey (PatientsLikeMe), 124
Alternate payment method (APM): accountable care organizations (ACOs) as type of, 13, 14, 102–106; bundled payments type of, 13; HSS goals for value-based payments and, 349; Merit-Based Incentive Payment System (MIPS), 349; patient-centered medical homes (PCMHs) type of, 13–14
American Dental Association (ADA), 371
American Health Information Management Association (AHIMA): data dictionary as defined by, 54; data quality characteristics developed by, 50–52; personal health records as described by, 28–29
American Hospital Association (AHA), 35–36, 127
American Medical Association (AMA), 39
American Medical Association Physician Consortium for Performance Improvement (AMA-PCPI), 337
American Medical Informatics Association (AMIA), 89–90, 153
American National Standards Institute (ANSI), 360, 361t, 362
American Recovery and Reinvestment Act (2009), 8
American Telemedicine Association, 126
Analytics. See Data analytics
ANSI (American National Standards Institute), 15
ANSI ASC X12N standards, 376, 378–379, 381t, 382e–383e
Anthem (Bon Secours case study), 470–473
Antivirus software, 314
Application administrator, 265
Application management, 256
Application service providers (ASPs), 158
Applications programmers, 263
ASC X12N standard for Health Care Eligibility Benefit and Response, 364–365
ASTM International, 267, 362, 368
Authorization forms (medical records), 31–32
Automated messaging tools, 121–123

B
Backups, 314–315
Beacon communities, 10
Becker’s Hospital Review, 46
Best of breed systems, 71
Big data: description of, 42; examples of, 46–48; five areas of analysis using, 48; small data versus, 43–44
Billing. See Patient billing
The board: as IT governance structure, 436–437; Lakeland Medical Center case study on capital project support by, 515–518
Bon Secours case study: care team model of, 470–471; challenges and lessons learned from, 472–473; eHealth strategies, 471–472; innovation impact, 473; population health management focus of, 468–470
Boundaries (HIPAA Privacy Rule), 292
Bundled payments, 13
Business intelligence (BI), 116
Business owners, 185, 186
Business sponsors, 185

C
California Health Care Foundation’s Ambulatory Intensive Caring Unit (AICU) model, 474
Capacity management information system case study, 477–478
Care management: ACO processes providing high-quality care and, 109–110, 115; description of, 110. See also Health care plans
CareGroup (McFarlan and Austin), 523
Case studies: access control, 316; hospital with inadequate IT architecture, 174; Rutledge Retirement Community case study, 184; St. Luke’s Medical Center, 184; Valley Practice, 146, 148–151. See also Health IT leadership case studies
CCD (Continuity of Care Document), 368, 376
CDT (Code on Dental Procedures and Nomenclature), 364, 371–372
CEN-CENELEC Management Centre (CCMC) [Belgium], 363
Census statistics, 45
Centers for Disease Control and Prevention (CDC): clinical quality measures (CQMs) developed and updated by, 337; Clinical Vaccines Administered (CVX) standards developed by, 371, 373–374; Early Aberration Reporting System of the, 494
Centralization IT organization, 267–268
Certification, 324, 325–326
Change. See Organizational change
Chief clinical informatics officer (CMIO), 256, 261
Chief information officer (CIO), 255–256, 258–260
Chief medical informatics officers (CMIOs), 147, 150
Chief technology officer (CTO), 256, 260
CIGNA (Bon Secours case study), 470–473
Cigna Health, 303t
Claims: CMS-1500/837P billing forms for, 36; CMS required standards for, 35–36; diagnostic and procedural codes, 37–42; required content of, 33, 35; UB-04/ CMS-1450/837l billing forms for, 35–36
Clinical Context Object Workgroup (CCOW), 368
Clinical data sets, 343–344
Clinical Document Architecture (CDA), 368
Clinical documentation system, 487–490
Clinical implementation team (CIT), 265
Clinical information systems: common types of, 68t; description of, 67; Garrison Children’s Hospital case study on, 487–490
Clinical quality measures (CQMs), 337, 338t–340t
Clinical Vaccines Administered (CVX), 371, 373–374
Cloud-based computing, option to contract for system with, 144, 158–160
CMS (Centers for Medicare and Medicaid Services): certification required for reimbursement from, 326; conditions of participation (CoPs) standards of, 326, 328e; e-prescribing, 364–365; EHR Incentive Programs, 8–10, 11t, 337, 338t–340t, 364, 365; Meaningful Use of EHRs, 8–10, 82, 308, 311, 371; payment reform efforts by, 7–8, 100–101; Quality Strategy and initiatives of, 347–348; requirements for standards used in claims, 35–36; on standards of the final rule under HIPAA Security Rule, 295; value-based payment methods pursued by, 12, 13; Voluntary Prescription Drug Benefit program, 364–365. See also Medicaid; Medicare CMS e-prescribing, 364–365
CMS Hospital Compare, 343, 344
CMS–1450 billing form, 35–36
CMS-1500 billing form, 36
Code on Dental Procedures and Nomenclature (CDT), 364, 370, 371–372
Codes. See Diagnostic and procedural codes
College of American Pathologists (CAP), 373
College of Healthcare Information Management Executives (CHIME), 258, 266
Columbia University, 303
Committee to Study the Impact of Information Technology on the Performance of Service Activities, 220–221, 242–243
Common Formats (AHRQ), 345
Commonwell Health Alliance, 15
Communication: patient record purpose as, 26; system implementation project plan on, 191, 197–198; WCH case study on steering committee’s EHR project, 485
Comparative effectiveness analytics, 48
Comparative health care data sets, 342
“Compartmentalized sensemaking,” 508
Competitive values. See IT competitive advantage
The Computer-Based Patient Record: An Essential Technology for Health Care (Dick and Steen), 4–5, 71
Concentra Health Services, 303
Conditions of participation (CoPs), 326, 328e
Confidentiality: Confidentiality of Substance Abuse Patient Records, 289, 290; cybersecurity protections for, 312–319; description and relationship to privacy, 288; of electronic protected health information (ePHI), 295; health care organization’s security program protecting, 306–311; legal protection of health information privacy and, 289–304; threats to health care information, 305–306
Confidentiality of Substance Abuse Patient Records, 289, 290
Connecting Health and Care for the Nation: A Shared Nationwide Interoperability Roadmap report (ONC), 83, 86–87, 359
Consent forms (medical records), 31–32
Consumer Assessment of Healthcare Providers and Systems (CAHPS), 342–343
Consumer control (HIPAA Privacy Rule), 292
Contingent accreditation, 331
Continuity of Care Document (CCD), 284, 368, 376, 381
Continuum of care, 26
Contracts: accountable care core process of managing, 110–111; build in-house or system developer, 160; cloud computing services, 144, 158–160; conducting negotiations for vendor, 165
Coordination of care, 10
Cost-benefit analysis (system acquisition), 164fig
Cost modeling analytics, 48
CPOE (computerized provider order entry): description of, 69t, 72; gathering information from other organizations with, 226; Health Matters case study on implementing, 492–494; IT-enabled value of, 218, 219; medical errors reduced by, 78; organizational change required for, 198–211; system implementation workflow related to, 190–192; unintended consequences of, 208, 209; University Health Care System case study on assessing value and impact of, 502–504
CPRs (computer-based patient records): history and evolution of, 69t; IOM’s Computer-Based Patient Record report advocating, 4–5, 71. See also EHRs (electronic health records)
CPT (Current Procedural Terminology), 37, 39, 370
CQMs (clinical quality measures), 337, 338t–340t
Crossing the Quality Chasm: A New Health System for the 21st Century report (IOM), 334, 335
INDEX

CSCP (comprehensive shared care plan), 32–33
CVS Pharmacy, 303
CVX (Clinical Vaccines Administered), 371, 373–374
Cybercriminals, 312
Cybersecurity: access control list, 315–316; antivirus software, 314; backups, 314–315; control access to PHI, 315; control physical access, 317; firewalls, 314; Kaiser Permanente case study on breaching patient portal, 507–509; limit network access, 317; maintain good computer habits for, 313–314; mHealth technologies, 312; need for, 312; NIST cybersecurity framework for, 317–319; protecting mobile devices, 313; strong passwords, 306, 316–317; Top 10 Tips for Cybersecurity in Health Care (ONC) on, 312–313. See also Security

Data: administrative, 335; disease registries, 336; health records, 336; qualitative, 336. See also Health care data
Data accessibility, 50, 52
Data accuracy, 50, 52
Data analytics: ACO applications of, 112–113; to facilitate key metrics of performance, 116; as integral to PHM, 111–112, 116; IT (information technology) department, 264–265
Data architect, 265
Data comprehensiveness, 51, 52
Data currency, 51, 52
Data definition, 51, 52, 54
Data dictionary: AHIMA definition of, 54; exercise for surgical site infection risk stratification/outcome detection, 56t–57t; NCPDP, 378, 380
Data exchange: HIE (health information exchange), 8, 15, 117–118fig; understanding why standards are required for, 358
Data exchange and messaging standards: ANSI ASC X12N standards, 376, 378–379, 381t, 382e–383e; Continuity of Care Document (CCD), 284, 368, 376, 381; Digital Imaging and Communication in Medicine (DICOM), 362, 376, 377; Fast Healthcare Interoperability Resources (FHIR) being tested for, 15, 369, 376, 384; HL7 (Health Level Seven International), 15, 360, 362, 367, 368–369, 376, 377, 378–379; National Council for Prescription Drug Programs (NCPDP), 264, 362, 364, 365, 376; NCPDP data dictionary, 378, 380; overview of, 376–377
Data granularity, 51, 52
Data precision, 51, 52
Data relevancy, 51, 52
Data sets: clinical data sets, 343–344; comparative health care data sets, 342; Hospital Compare, 343, 344; patient satisfaction data sets, 342, 343; practice patterns data set, 343
Data timeliness, 52
Data warehouse, 43
Database, 43
Database administrators, 263
De facto standards, 360
Decentralization IT organization, 268–269
Deemed status, 329
Denial of accreditation, 331
Dermatology practice EHR case study, 480–481
Design phase (SDLC), 144fig, 145
Designated standard maintenance organizations (DSMOs), 364
Diagnostic and procedural codes: CPT (Current Procedural Terminology), 37, 39, 370; description of, 37; HCPCS (Healthcare Common Procedure Coding System), 37, 39, 42, 370; HHS OIG compliance guidelines to ethical and legal coding practices, 42; ICD-10-CM and ICD-10-PCS, 37–39e, 38e–39e, 40e; patient encounter form coding standards, 41e
Digital Imaging and Communication in Medicine (DICOM), 362, 376, 377

IT alignment: challenges to strategy and, 417–423; IT assets available for, 405–408, 456–458; IT effectiveness dependence on strong, 455; IT initiatives linked to organizational goals, 397t; multiple objectives of planning process for, 396–398; normative approach to developing strategy and, 408–417; overview of strategy and strategy vectors of, 398–405
IT alignment challenges: alignment at maturity, 419; emerging technology and hype cycle, 421–423, 424–425; IT plan emphasized themes, 420; IT planning has neither a beginning nor an end, 420; IT planning involved shared decision making and shared learning, 420; IT planning was not a separate process, 419–420; IT strategy is not always necessary, 421; limitations of alignment, 419; persistence of the alignment problem, 418–419; planning methodologies, 417–418
hinder, 454; individual and leadership contributions to, 453–454; organization must encourage innovation for, 454–455; six principles for high-performance, 456; solid foundation of IT innovation for, 455; strong IT alignment for, 455; studies to determine, 452–453; understanding that true innovation takes time, 455; visionary and thoughtful evaluation of IT opportunities for, 455

IT-enabled value: analyses of the challenge of, 242–247; definition and characteristics of, 216–225; as diverse and complex, 225; ensuring the delivery of value, 235–242; of incremental innovations rather than “big bang” initiatives, 245; project proposal, 225–235

IT-enabled value characteristics: cost reduction, 223; different analyses for different objectives, 220–221; diverse across proposals, 219–220; diverse in a single investment, 220; investments in infrastructure, 221–223; major strategic initiative, 224; mandated initiatives, 223; quality improvement, 224; significant organization value, 218; specific new products and services, 223; tangible and intangible, 216–218; variability, 219

IT evaluation: assessing the IT function, 277–278; budget development and resource allocation, 275–276; of core IT process management, 280; governance structure, 275; HIPAA Security Rule on security of ePHI, 297; issues to consider for, 275; IT service levels, 276–280; system acquisition, 276; system implementation, 210–211, 276

IT governance: characteristics of, 430–431; description of, 428–429; foundation of, 430; improving coordination with rest of organization, 439; IT responsibilities of, 431–438; Newcastle Hospital case study on strategic IT planning for ED and role of, 514; structure of, 275, 436–440

IT governance structures: the board, 436–437; description of, 275; IT liaison relationships, 438; IT steering committee, 438; senior leadership organization forum, 437–438; variations in, 438–440

IT groups: as IT cooperation mechanism, 439; “compartmentalized sensemaking” of, 508; specialized, 255

IT (information technology): administrative activities of, 255–256; analytics department of the, 264–265; applications management
goals, 397; management role in avoiding mistakes in, 428, 445–452; supporting goals of providers, 410; supporting strategic goal for health plans, 411. See also Federal quality improvement initiatives

IT innovation: having a solid foundation for, 455; how technology and technical infrastructure both enable and hinder, 454; organization must encourage, 454–455; understanding that it takes time, 455

IT innovation impact: Bon Secours case study, 473; Union Health Center (UNC) case study, 476

IT investments: accountability for results of, 444–445; informational, 238; infrastructure, 238; IT budget development grounds rules for assessing non-IT and, 444; principles for management and, 435; Southeast Medical Center case study assessing value of, 504–506; strategic, 238; transactional, 238

IT liaison relationships, 438

IT managers, 185, 187

IT organization: base support and services, 270; care improvement capability, 270–271; centralization or decentralization organization of, 267–269; core IT competencies, 269–270; departmental attributes, 271–272; technical infrastructure, 271.

See also HIT (health information technology)

IT (information technology) staff: analytics department, 264–265; attributes of, 266–267; centralization or decentralization organization of, 267–269; core IT competencies of, 269–270; database administrators, 263; network administrators, 264–265; organizing services and, 267–270; positions in high demand, 266; programmers, 263; project leader, 262; systems analyst, 262–263

IT infrastructure: case study on hospital with inadequate, 174; description of, 271; how it can enable and hinder IT effectiveness, 454; investment in, 238; as IT asset, 407; Lakeland Medical Center case study on board support for capital project, 515–518; metrics of IT service level of, 277; Newcastle Hospital case study on strategic IT planning for ED and role of, 514. See also IT architecture

IT initiative mistakes: failure to anticipate short-term disruptions, 450; failure to respect uncertainty, 449; how to anticipate and avoid, 445, 451–452; imitative undernourishment, 449–450; insufficient leadership support, 446–447; lack of an appropriate reward system, 447–448; lack of belief in the project, 446; lack of candor, 448; lack of clarity of purpose, 446; lack of technology stability and maturity, 451; organizational inertia, 447; organizational baggage, 447; organizational complexity, 448–449

IT initiatives: IT strategic development and priorities of, 415/fig; links to organizational by, 254–255; challenge of hype cycle and emerging, 421–423, 424–425; core functions of, 253; definition of, 66; departmental attributes of, 271–272; effectiveness in applying, 428; evaluating effectiveness of, 275–280; future demands on IT function of, 274; to improve competitive position of organization, 428; in-house versus outsourced, 272–273; Internet of Things class of, 404; managing core IT processes, 280; operations and technical support of, 254; organization of staff members and services, 267–272; payment reform challenges facing, 264; person-generated health data (PGHD), 82–83; responsibilities of, 253; senior leadership roles in, 256–261; specialized groups of, 255; staff of, 262–270; technical infrastructure of, 271. See also HIT (health information technology)
responsibilities, 433–436; user responsibilities, 433

IT senior leadership: chief clinical informatics officer (CMIO), 256, 261; chief information officer (CIO), 255–256, 258–260; chief information security officer (CISO), 256, 260–261; chief technology officer (CTO), 256, 260; IT effectiveness role of, 453–454, 456–458; management responsibilities of, 433–436; organizational chart of large systems, 257–fig; senior management IT responsibilities, 433–436

IT service levels: day-to-day support and consultation measures, 277; description of, 276–277; infrastructure metrics, 277; software bugs, 278

Oregon Health & Science University, 303t

Organization for the Advancement of Structured Information Standards (OASIS), 363

Organizational change: achieving connection and trust, 200–201; allocate sufficient resources for, 206–207; create an appropriate environment, 202–204; effecting, 199; establish strong working relationships with vendors, 208, 210; implementation and managing the, 198–208; incentives for, 201; know your culture and potential user resistance, 204–205; language and vision of, 200; leadership role in, 199; managing unintended consequences of CPOE, 208, 209; organizational and behavioral factors of, 202; planning, implementing, and iterating, 201–202; provide adequate training, 207–209

Organizational culture: Newcastle Hospital case study on strategic IT planning and factor of, 514; system implementation and understanding your, 204–205

Organizational strategies: IT alignment and strategy discussion linkage to, 409; IT initiatives necessary to support goals of, 410e; IT strategies derived from, 400, 401

ORYX program, 337

Outcome quality measure, 336t

Outcomes analyst, 265

Outsourced IT (information technology), 272–273

P

PACS (picture archiving and communication systems), 220

Partners HealthCare, 270–271

Partners Healthcare System: Transforming health Care Services Delivery through Information Management (Kesner), 521–522

Pathology reports (patient record), 32

Patient billing: CMS–1450 billing form, 35–36; CMS-1500 billing form, 36; diagnostic and procedural codes, 37–42; DRGs (diagnosis related groups) impact on, 37, 70–71; 837P billing form, 36; 837I billing form, 35–36; patient records used in, 26; UB-04 billing form, 35–36. See also Reimbursement

Patient care assistants (PCAs), 474

Patient care. See Health care

Patient-centered medical homes (PCMHs), 13–14, 102–104

Patient engagement: as population health management (PHM) component, 100; population health management (PHM) tools for, 119–123

Patient engagement tools: automated messaging, 121–123; patient portals, 68, 73–74fig, 82, 119–123, 507–509; social media, 120–121, 124–126

Patient experience quality measure, 336t

Patient medical record information (PMRI), 371

Patient portals: CMS Meaningful Use program and use of, 82; description of, 68, 73; Kaiser Permanente case study on breaching security of, 507–509; New York-Presbyterian (NYP) Hospital’s myNYP.org, 120; as patient engagement tool, 119–123; sample screen of, 74fig

Patient Protection and Affordable Care Act (PPACA). See Affordable Care Act (ACA)

Patient record content: consent and authorization forms, 31–32; consultation note, 30–31; discharge summary, 32; history and physical, 30; identification screen, 29; imaging and X-ray reports, 31; laboratory reports, 31; MAR (medication administration record), 29–30; operative report, 32; pathology report, 32; physician’s orders, 31; problem list, 29; progress notes using SOAP format, 30; sample heart failure and hypertension query screen, 45fig

Patient records: AHA and NUBC UB-04/CMA-1450/837I codes, 35–36; content of, 29–33; diagnostic and procedural codes, 37–42; as legal documentation, 26, 27–28; medical record versus health record, 24–25; NUBC CMS-1500/837P claim form, 36; purposes of, 25–27. See also specific type of record

Patient safety: health care transparency on, 7–8; *Health IT and Patient Safety: Building Safer Systems for Better Care* report (IOM),
Patient Safety: Achieving a New Standard for Care (IOM), 5, 72
Patient Safety Act (Patient Safety and Quality Improvement Act of 2005), 344–345
Patient safety events: incidents, 345; near misses (or close calls), 345; unsafe conditions, 345
Patient Safety Organizations (PSOs), 345
Patient satisfaction: EHR system as increasing, 79–80; social media measures of, 126–127
Patient satisfaction data sets, 342, 343
PatientsLikeMe website, 124–125
Pay for performance (P4P), 7
Payment methods: alternate payment method (APM), 13–14; DRGs (diagnosis related groups), 37, 70–71; merit-based incentive payment system (MIPS), 13t, 349t; pay for performance (P4P), 7; value-based payment methods, 12, 13
Payment reform: Centers for Medicare and Medicaid Services (CMS) role in, 7–8; CMS’s pursuit of value-based payment methods, 12, 13, 100–101; IT (information technology) challenges related to, 264
Payroll systems, 69t
Peak of inflated expectations phase (hype cycle), 422fig
Performance: ACO processes of measuring, predicting, and improving, 111–112; analytics to facilitate key metrics of, 116; data analytics used to measure quality and outcomes of, 111; retrospective monitoring of, 111–112
Performance measures, 324
Performance risk management analytics, 48
Person-generated health data (PGHD), 82–83
Personal computers (PC) [microcomputers], 70 Personnel management systems, 69t
Pharmacy information systems, 68t
PHI (protected health information): control access to, 315–316; definition of, 24; HIPPA provisions on, 24, 288, 289, 290–303t; Privacy Act of 1974 on, 289–290
PHRs (personal health records): CMS Meaningful Use program and use of, 82; description and advantages of, 28–29, 80, 82–83; examining the applications and adoption of, 66. See also Health care information systems; Health records
Physician practices: case study on selecting an EHR for dermatology, 480–481; EHR adoption in office-based, 75, 77fig
Physician Quality Reporting System (PQRS), 347–348
Physician selection social media tools, 126
Physician’s orders, 31
Physicians Quality Reporting System (PQRS) number, 337
Picture archiving and communication systems (PACS), 220
