INDEX

A
Abstraction
interface with computers and, 25–26
location as, 59–63, 70, 74, 76
Abstraction, history of, 55–64
binary code and digital computers, 58–59
computer networks, 59–62, 69
language and books, 55–57
social abstraction and information turned to knowledge, 62–64
telegraph communication, 57–58
Access, as social machine
attribute, 103–105
Airbnb and, 126–128
implications for product design, 115
overview, 114
Zipcar and, 140
Accommodation services, Airbnb and, 126–128, 139–141
Activity, as social machine
attribute, 103–105, 112
implications for product design, 112
overview, 112
Adafruit, 231
Advanced Circuits, 231
Airbnb
access as social machine attribute and, 126–128
retrofit business model, 139–141
Amazon
delivery as primary product of, 72
Elastic Compute Cloud, 171, 182
Kindle, 68, 71–72, 154
Andreessen, Marc, 27
ANT networks, 174
Apple Computer
Apple II, 87
developer platform and, 202
interfaces and, 25, 44
iPhone and, 25, 32, 172, 182, 202
Application programming interfaces (APIs)
avatar design issues and, 180–181
benefits of open, 94
HVAC example, 151, 155
Nest and, 201–202
weather station applications, 78–79
Applications, as social machine
design component, 169, 181–183
Arduino, 161
ARPANET, 59
Arrow, 230
Asimov, Isaac, 32–33
Automobiles. See also Transportation services
  anthropomorphizing of, 23–24
  computers in, 29
  gathering weather data from, 213–216
  ODB ports and, 131–134, 139, 185, 215–216
  sharing services and, 128–130, 139
  social machine possibilities for, 8
Avatars. See also Social seven
  attributes
  as digital presence of product, 43–44
  interfaces with computers and, 27
  as social machine design component, 169, 176–181
Axeda, 232

B
Battery life, design issues and, 175
Behavioral economics, 133
BERG Team, 230
Bezos, Jeff, 71, 72
Bicycle, social machine
  possibilities of, 84–94, 107
  data sets available from, 85–86
  government’s benefits, 91–92
  groups of riders’ benefits, 89
  individual riders’ benefits, 87–89
  manufacturers’ benefits, 92–93
  organizations’ benefits, 90–91
  for three kinds of customers, 84–85
Binary code, history of abstraction and, 58–59
Bluetooth networks, 174
BOS Ice Tea, 207
Braungart, Michael, 33
Bricklin, Dan, 87
Bug Labs, Inc., 69, 95, 230
diabetes monitoring and, 13–16
production scheduling challenges and, 161–163, 166
Bug Labs swarm, 232
Built-in model, of social machine business
  HVAC example, 142–147
  machine design issues, 185–187
Business value
  built-in model and, 142–147
  people sharing things and, 125–130
  retrofit models and, 139–141
  social pricing and, 154–155
  social value chain and, 151–152
BusinessWeek, 69

C
C and C++, 182
C#, 182, 183
C&M Corporation, 231
C2C (cradle-to-cradle) design, 33
Cables, resources for, 231
Carrier networking testing, 166
Cars. See Automobiles
CE certification, 165
Certification labs, resources, 233
Certifications, production scheduling challenges and, 165–167
Cetecom, 233
CGI, 232
Change Function, The (Coburn), 45
Chase, Robin, 128, 129
Choice, Airbnb and, 127
Chumby, 162
Circuitco Electronics, LLC, 229
Clark, Andy, 8
Cloud computing
design issues and applications, 181, 182–183
design issues and CPU connection, 171
weather station applications, 76–80
wheelchairs and hand sanitizer example, 83–84
Coburn, Pip, 45
Coca-Cola, 207
Cognitive Surplus (Shirky), 9
Collaborative consumption (people sharing things), 125–126
accommodation services, Airbnb, 126–128
transportation services, Zipcar, 128–130
Communities, resources, 231–232
Compliance Testing, 233
Computers, interfaces of and love/hate relationships with, 24–25
Connected Development, 233
Contract manufacturers, resources, 229
Copesetic Inc., 230
Corbett, Peter, 207, 209
Cosm, 232
CPUs, machine design and location of, 170–171
built-in model and, 185–186
Cradle-to-cradle (C2C) design, 33
Craigslist, 62–63, 126
Crowdsourcing
Pebble and, 164–165
weather station applications, 76
CSI Electronics, 231

D
Dalai Lama, 121
Danielson, Antje, 128
Data, as the new steel, 40–41, 63
Data, things sharing, 130
financial services, Progressive Insurance, 131–134, 139, 219
health services, Vitality, Inc., 134–135
Delivery, as Amazon’s primary product, 72
Delta Mobile, 233
Design. See Social machines, design requirements
Design firms, resources, 230
Developers, 69–71
  benefits of social bicycle, 84–85
  social value chain and, 151–152
Developers’ customers, 69–71
  benefits of social bicycle, 84–85
  social pricing and, 154–155
  social value chain and, 152
Development disruption,
  production scheduling
  challenges and, 165
Devices, CPU included on, 170, 181, 182
Diabetes, device to monitor heart
  rates and blood sugar levels, 15–16, 18
Digi, 232
DigiKey, 230
Digital computers, history of
  abstraction and, 58–59
Discoverability, as social
  machine attribute, 103–105, 108
  implications for product
  design, 109
  overview, 109
DNS (domain name system),
  avatar design issues and, 177–181
Documentation, importance
  of, 94
E
ECCO, 230
Economic issues, of production, 163

Economist, 30
Edmond Marks, 229
Elastic Compute Cloud (EC2), of
  Amazon, 171, 182
Elderly persons
  social machines and “hugs,” 16–17
  social machines and independent living, 225–227
Electronic watch project
  (Pebble), 164–165
Electrotek, 231
E-mail, as not social, 68–69
Energy management, in houses, 8, 199–202
Equity trading, and proximity to exchanges, 31
Ethernet jack and cable, 172
Ethernet-over-USB, 172
Evrything, 232

F
Facebook, 40, 125
  discoverability and, 109
  example of use of, 5–7
  news reporting and, 31
  number of users, 33–34
  status changes and, 113
Fadell, Tony, 200, 201, 202
Federal Communications Commission (FCC), certifications and production
  scheduling, 165–166
Feedback loops, social machines
  and, 51–52
Ford Motors, 134, 214–216
Foursquare, 83, 205
  Social Cooler of, 208–209
Friction
production scheduling challenges, 163–165
removing from use of social machines, 119–120
Fuller, R. Buckminster, 47, 67–68, 193

G
gChat, 112
