ASME construction and hydro testing documentation, 84
ASME P-Data Forms *see* ASME construction and hydro testing documentation
atmospheric tanks, 156, 158, 159
auxiliary low water cutoff, 85, 87, 224
back pressure turbine estimating power output, 197–198, 199 vs. PRV, 197, 198
balanced pressure thermostatic-type trap, 136–137, 137
BD *see* boiler blowdown
BEP *see* boiler external piping
Bernoulli’s theorem, 141–142
bimetal-type steam trap, 138, 139
biomass fuel water content reduction, 219, 221, 221
blowdown heat recovery units, 214–216, 215, 216
blowdown systems
  automatic conductivity-based blowdown system, 90
  boiler, 90, 91
gauges and sight glass, 90–91
  surface and bottom blowdowns, 90
  suspended and dissolved solids, 89–90
BMS see building management system boiler
  commissioning, 243–244
  input, output, and efficiency, 239–241
  output performance field test, 242
  performance test, 241–242
  troubleshooting see troubleshooting, steam generator
boiler blowdown
  automatic vs. manual controls, 181
  best operating practices, 181
  cycles of concentration, 181–182, 182
  rate, determining, 181–183
  suspended and dissolved solids, 180
boiler efficiency
  combustion efficiency, 207, 208–211
  fuel to steam efficiency, 207, 211–212
  thermal efficiency, 207, 211
boiler external piping, 84
boiler heat balance, 207
boiler layup in standby condition
  boiler filled with treated water, 288
  draining and drying, 288–289
  intermittent standby, 287–288
boiler room utilities
  combustion air, fuel, and efficiency, relationship, 62
  combustion air requirements, 61
  comparative data, fuels, 61
  cycles of concentration, 64–65
  electrical power, 66
  fresh air opening designs, 63
  fuel supply, 65
  water usage, 64
boiler safety checks
  combustion air switch, 227
  fuel pressure switches, 227
  high-pressure cutoff switches, 225–227
  low water alarm cutoff signal, 225–226
  safety relief valves, 227
boiler sequencing, 101–102, 102
boiler soaking procedure, 289–290
boiling, formation of steam boiler, 10
  ideal gas law, 11–13
  latent heat, 9
  pounds per square inch gauge or psig, 11
  pressure and boiling, 11
  psia or pounds per square inch absolute, 11
  saturated steam, properties of, 12
  saturation temperature, 9
  sensible heat, 9
  water and steam enthalpy curve, 10
boiling process
  film boiling, 13, 14
  latent and sensible heat vs. pressure, 16
  nucleate boiling, 13, 14
  steaming, 14–16
boil out procedure, 231
  for boiler only, 286–287
  for entire steam system, 287
BPT see back pressure turbine
building management system, 53, 66, 84
  burners, 97–98
caustic embrittlement, 177
chemical feed systems
  boiler fouling and scaling control, 184
  boiler pH/alkalinity control, 183
  condensate pH control, 184
  oxygen scavenger, 183
  steam system chemical treatment scheme, 183, 184
chemistry limits, boiler water, 185, 186
CHP see combined heat and power
  combined heat and power, 219, 221
  combustion air preheating, 213–214
  combustion (burner) control
    air density compensation, 97
    combustion control sequence for gas-fired boiler, 96, 96
    flame programmer, 94, 95
    gun style burner, 97–98, 98
    mesh-style low-emissions-type, 98, 98
    oxygen trim, 97
    prepurge, 96
combustion efficiency
vs. boiler firing rate, 211, 211
boiler pressure vessel surface area, 209, 210
data
for natural gas-fired boilers, 274
for number 2 fuel oil, 274–275
for wood, 40% moisture, 275–276
excess air, 208
flue gas analysis vs. excess air, 208, 209
PLC combustion, 209
principles, 208
temperature difference, 210
thermal conductivity, 210
commissioning
condensate and feed water system, 257–258, 259
precommissioning, 237–238
safety concerns or equipment accessibility, 236–237
startup vs., 235
steam delivery system
condensate trapping/draining, 255
control valve selection, 254–255
steam distribution piping, 253–254
undersized and poorly drained steam header, 254
venting, 255
steam generator, 243–244
condensate and feed water system
chemical injection, chemicals, 258
condensate collection, 257–258
deaerator, maintenance, 259
discharge pressure, 261
efficiency, 217, 219, 220
excessive feed water pump cycling, 259
internal inspection, 260
oxygen levels, deaerator, 261
3–5 psig pressure, 260
surge tank, 260–261
troubleshooting, 259–261
water level, 259–260
water level, DA, 261
condensate collection
electric condensate return system, 148, 149
pressure motive condensate pump, 150, 151
pressure motive pump installation requirements, 150–153
pumped condensate return line installation, 153
steam-using condensate line sizing chart, 135, 135
drain lines to traps, 133, 133
trap discharge lines, 134
condensate recovery system
condensate collection, 147–153
condensate, definition, 131
condensate line sizing, 133–135
flash steam utilization, 144–147
fundamental purposes, 131
steam trap applications, 136–144
subsystems, 131–132, 132
surge tank application, 153–154, 154
condensate trapping/draining, 255
condensation of steam
condensate, 21
rate of condensation, 20
typical jacketed kettle steam application, 20
water logging, 21
conduction, 26
conduction type heat transfer
boiler water, 28–29
relative thermal conductance, 28
thermal conductivity, 26
through metal wall with films attached, 29
undesirable conduction, 29
control valves
direct acting valves, 116–117, 118, 119
pilot-operated valve, 117, 120
pneumatic operated steam control valve, 117, 119
pressure, 115–116, 116
pressure reducing stations, 117, 121, 121, 122
selection, 254–255
temperature, 116, 116
convection, 29
convection-type heat transfer
coefficients, common fluids, 30
convection, 29
effect of airflow vs. heat loss over hot steel surfaces, 30
convection-type heat transfer (cont’d)
equation for, 30
forced convection, 29
high-turndown boiler burners,
consequence, 31
surface flow, 29
waterside of pressure vessel, 31
corrosion control, 171
chemical and mechanical deaeration, 179
general corrosion or rusting, 177, 180
localized corrosion, 177
magnetite, 177, 179
red oxide (hematite), 177, 178
stress corrosion, 177
water chemistry parameters, 179

dCS see distributed control system
deaeration, feed water system
chart, 157
elimination of dissolved gases, 156–157
mechanical deaeration, 155
oxygen corrosion, 157
oxygen solubility vs. temperature, 156,
156–157
deaeration systems, 174–175
differential pressure transmitter type, 85
distributed control system, 53
DI systems see deionization systems
DPT see differential pressure
transmitter type
dry saturated steam, 43–44
economizers, 213–214, 214
EER see effective evaporation rate
EF see emissions factor
effective evaporation rate, 57, 64–65,
181–182, 216
electric boilers
advantage, 80
clean steam generator system, 81
combustion section of a fuel-fired
boiler, 79
electrode-type electric boilers, 79–80
high-voltage electrode boiler, 80
resistance or electrode type, 78
resistance-type electric boilers, 78
electric condensate return system, 148, 149
electronic controller (flame programmer), 83
emissions factor, 101
emissivity coefficient (ε), 25
environmental considerations, boiler
room
boiler breeching and stack sizing
guidelines, 59
boiler room temperature control, 59
flue gas handling, 56–57
hot water discharges, 57
permits, 55
space concerns, 55
steam and gas line venting, 60
steam boiler venting system, 58
venting scheme, 57
fatigue corrosion, 177
feed water system, 155, 156
daeration, 155–157
definition, 155
piping, 167–169
pumps, 162–167
tanks, 158–162
film boiling, 13, 14
flame programmer, 83, 94, 95
flash steam formation, 16–18
calculation, 18
percent flash steam, 17
flash steam utilization
flash steam recovery, 147, 147
flash tank design, 144–145, 145
flash tank design graph, 145–146, 146
float and lever type, 138–139, 140
float and thermostatic types, 139, 140
fossil fuel-fired boilers
cast iron boilers, 73
cast iron sectional boiler, 76
dryback versus wetback boiler
configuration, 73
firebox boilers, 71
firetube boilers, 71
flexible watertube (bent-tube)
boilers, 73
industrial watertube boiler, 71, 71
model 4WI-wet back design, 73
Scotch marine, classic horizontal firetube
boiler, 70–73
vertical tubeless boilers, 75
watertube boiler design, 75
XID tube design, 72
fouling control, 171, 176
fuel delivery
  boiler burner oil delivery system, 92–93, 93
  burner fuel/air flow control systems, 93–94, 94
  fuel trains, 91, 92
  PLC-type controls, 93
  wood chip fuel feed system, 94, 95
fuel to steam efficiency
  boilers’ efficiency, 211–212
  principles, 208
Hartford loop system, 192, 192

  startup to steam time, 53
  steam quality, 55
  steam system capacity, 53
steam trap applications, 255
  air binding, 136
  float and lever type, 136–139
  inverted bucket type, 140–141, 141
  open top bucket type, 139–140
  thermodynamic group, 136
  required information, 142–144
  steam trap selection flow chart, 143, 144
  thermodynamic disc type, 141–142
steam trap applications (cont’d)
thermostatic group, 136
- balanced pressure type, 136–137, 137
- bimetal-type steam trap, 138, 139
- liquid expansion thermostatic steam trap, 137–138, 138

steel pipe properties, 276–277
stop and safety valves
- boiler relief valves, installation, 129, 130
- globe and gate valve designs, 127, 128
- safety relief valve, 129, 129
- stop check valve cross section, 127, 128

superheated steam
- condensation of superheated steam, 46–47
- desuperheaters, 47, 48
- PRV, 47
- steam trapping of equipment, 48
- superheaters, 46
- table, 271–272

superheaters, steam, 200–202
- electric steam superheater skid, 201, 202
- evaluation, 202
- hot oil systems, 200–201
- superheated steam, 195, 195

surge tank application, 153–154, 154
system heat balance, 205, 207

tanks, feed water system
- atmospheric, 158, 159
- feed water tank sizing, 160
- spray-type feed water deaerator, 158–159, 160
- tray-type feed water deaerator, 159, 161

TCVs see temperature control valves
TDS see total dissolved solid limits
temperature control valves, 116
thermal conductivity, 26
- common materials, 27
- relative thermal conductance, 28
thermal efficiency, 207, 211, 216, 250
thermal radiation, 23, 25
thermodynamic disc type, 141–142, 143
total dissolved solid limits, 176
total suspended solid limits, 176
tray-type feed water deaerator, 159, 161

troubleshooting
- approach, skills, 236

condensate and feed water system, 259–261
steam delivery system
- banging noises, piping, 256
- excessive steam line pressure fluctuations, 255–256
- product heat exchanger, 256
- steam control valve, 256
- whistling noise, steam lines, 255
steam generator
- air switch, 245
- air-to-fuel ratio, 246
- barometric damper, 246
- burner adjustment, 251
- corrosion, 250
- depressurization, 247
- feed water pump, 248
- flame failure, 245
- high carryover, 249–250
- “howling,” 246
- idle boiler, 249
- low water, 248, 249
- on/off switch, 244–245
- pressure, 247
- pressure control settings, 245–246
- stack analysis, 246–247
- stack temperature, 250–251
- steam accumulator, 247
- steam quality, 249–250
- vibrations, 251
- water level oscillations, 249

TSS see total suspended solid limits

unfired steam generators, 81

variable-frequency drive motor, 85, 164
venting, 49–50, 55–58, 60, 105, 130, 138–140, 142, 153, 159, 174, 253, 255
VFD see variable-frequency drive motor

water chemistry, basic
- boiler scale formation, 172
- chemical treatments (internal treatment), 172
- city water, 171
- components, 172
- groundwater, 171
nonchemical methods (external treatment), 172
RO/DI water, 171
types and chemistry, 171, 173
water logging, 21, 36, 134, 190, 192
water softener systems, 174, 174
water treatment equipment
  setting up, 263–264
  troubleshooting, 264–265
water treatment system troubleshooting
  calcium and magnesium levels, 265
calculus and magnesium levels, 265
chemical level, 265
excessive sludge buildup, 265
high carryover, 264
internal inspection, 264
low or high pH, boiler water, 265
water level bouncing, 264
water usage method
  performance test, 291
  prerequisites, 290–291
wet steam, 44, 117, 121, 126
wood chip fuel feed system, 94, 95
