## Section 1  Legal and ethical aspects of care for older people with substance misuse

1  Negotiating capacity and consent in substance misuse
   Kritika Samsi
   Introduction
   Substance abuse and capacity 3
   Mental capacity legislation 4
   Mental Capacity Act 2005 4
   Capacity assessment 5
   Capacity and unwise decisions 6
   Consent, barriers to decision making and substituted decision making
      Best interest decisions 8
      Independent decision makers 8
   Conclusion 9
   References 9

2  Elder abuse
   Jill Manthorpe
   Introduction 11
   Defining elder abuse
   Main reviews
      Alcohol and substance misuse risk factors 12
      Risk factors among older people 13
   The effects of elder abuse 14
   Discussion 15
   Conclusions and next steps 15
   References 16
3 The United States perspective 18
Cynthia M.A. Geppert and Peter J. Taylor
The ageing of the baby boomers and its impact on substance abuse 18
Ethical and legal aspects of substance misuse in older adults 19
Confidentiality 19
Informed consent 20
Capacity 21
Coercion 24
Conclusion 25
References 25

4 The European perspective 27
Abdi Sanati and Mohammed Abou-Saleh
Introduction 27
Use and possession 28
Crime 28
European Convention of Human Rights 28
Delivering services for the elderly with substance misuse – ethical aspects 29
Research and development 30
Policy making 31
Some differences between Europe and the USA 31
Ethical issues regarding treatment 32
Stigma 32
Underprescribing controlled drugs 32
Summary 33
References 34

5 Clinical medicine and substance misuse: research, assessments and treatment 35
Amit Arora, Andrew O’Neill, Peter Crome and Finbarr C. Martin
Introduction 35
Why is clinical medicine important? 36
Identification 37
The health effects of substance abuse 39
Challenges for the future 46
Research 47
Identification tools 47
Training and support 48
Conclusions 49
References 49
9 Epidemiology and demography of nonmedical prescription drug use

Jane Carlisle Maxwell

Introduction 109

Findings
National surveys 110
Emergency department cases 112
Treatment admissions 113
Drug poisoning deaths 114
Discussion 116
Conclusions 118
Acknowledgement 118
References 118

Section 3 Longitudinal studies of ageing and substance abuse

10 Ageing and the development of alcohol use and misuse

Marja Aartsen

Background 123

Results
Differences in alcohol use across cohorts 125
Developments in alcohol use within people 126
Gender differences 126
Different trajectories 126
Age and onset of problem drinking 127
Discussion 127
Explanations for age differences in alcohol use 127
Conclusions 128
References 129

11 Progression from substance use to the development of substance use disorders

Carla L. Storr and Kerry M. Green

Introduction 133
Substance use progression process 134
Risk factors influencing substance use progression
Individual factors 137
Substance properties 139
Environmental influences 140
Future direction 141
Conclusions 143
Acknowledgement 144
References 144
12 Psychopharmacology and the consequences of alcohol and drug interactions
Vijay A. Ramchandani, Patricia W. Slattum, Ashwin A. Patkar, Li-Tzy Wu, Jonathan C. Lee, Maitreyee Mohanty, Marion Coe and Ting-Kai Li
The extent of alcohol and drug misuse among older adults 149
  Substance misuse in the general population 149
  Substance misuse or addiction in clinical settings 150
  Co-morbidities among older substance misusers 151
Psychopharmacology of alcohol and drug misuse in older people 152
  Neurocircuitry of abused substances 152
Alcohol–drug interactions in older adults 155
  Mechanisms of alcohol–medication interactions 156
  Significance of the problem 156
  Concurrent use of alcohol and potentially interacting medications 157
  Consequences of concurrent use of alcohol and medications 158
Clinical presentation and evaluation of substance use disorders in the elderly 158
  Clinical presentations (case vignettes) 159
  Medical co-morbidities 161
  Screening for substance use disorders 161
  Evaluation of substance use disorders 162
  Cognitive impairment in the elderly with substance use disorders 163
  Safety assessment of the elderly with substance use disorders 164
  Medications for individuals with substance use disorders 164
Conclusions 166
References 166

Section 4 Comprehensive geriatric assessment and special needs of older people 171

13 Comprehensive geriatric assessment and the special needs of older people 173
Dan Wilson, Stephen Jackson, Ilana B. Crome, Rahul (Tony) Rao and Peter Crome
Background 173
Assessment 175
  Setting 176
  Barriers to assessment 176
  High-risk groups 177
  Presenting problems 177
  Collateral information 178
  General principles of assessment 179
Screening 182
Psychiatric assessment 183
Case presentations 184
  Driving and substance misuse 184
  Older women and alcohol misuse 184
  Polysubstance misuse 185
  The frequent attender 185
  Alcohol and cognitive impairment 186
  Pain and substance misuse 187
Discussion 187
Conclusion 187
References 188

Section 5  Screening and intervention in health care settings 193

14  Screening and brief intervention in the psychiatric setting 195
   M. Shafi Siddiqui and Michael Fleming
   Overview 195
   Screening and assessment for alcohol use disorders 197
     Single question screen for an alcohol use disorder 197
     Quantity and frequency questions 198
     Proxy questions such as CAGE 198
     Symptoms of abuse or dependence 199
     Alcohol biomarkers 199
   Illicit drugs 202
     Rationale for screening older adults for marijuana, cocaine and other illicit drugs 202
     Screening for illegal drugs in the psychiatric setting 202
     Recommended screening questions to detect drug use 202
     Screening for drug abuse/dependence 203
     Screening for illicit drug use with toxicology screening 203
   Prescription drug abuse 204
     Rationale for screening older adults 204
     Screening for prescription drug abuse 205
   Brief intervention for alcohol, prescription drug abuse and illegal drug use 206
   Summary 208
   References 209

15  Tobacco use cessation 212
   Daniel J. Pilowsky and Li-Tzy Wu
   Introduction 212
   Smoking cessation interventions among older adults 214
     Multimodal interventions 214
     Medication-based interventions 216
Section 6 Use of substance abuse treatment services among older adults

16 Epidemiology of use of treatment services for substance use problems
   Shawna L. Carroll Chapman and Li-Tzy Wu
   Introduction
   Tobacco cessation service use and characteristics
   Alcohol treatment use and characteristics
   Trend in substance abuse treatment admissions
   Drug abuse treatment use and outcomes
   Substance abuse treatment in general health care settings
   Discussion and conclusion
   References

17 Implications for primary care
   Devoshree Chatterjee and Steve Iliffe
   Background
   Implications for primary care
   Different populations at risk
   Screening in primary care
   Scale of benefit
   Co-morbidities and social context
   Conclusions
   References

18 Addiction liaison services
   Roger Bloor and Derrett Watts
   Introduction
   Organizing an addiction liaison service to a general hospital
   Case vignette 1
   Addiction liaison services for older adults
   Essential elements of liaison service provision for older adults
   Screening for alcohol problems in older adults
   Screening for drug use problems
   Case vignette 2
   Summary
   References
19 Current healthcare models and clinical practices 265

Section 7 Age-specific treatment interventions and outcomes 271

20 Pharmacological and integrated treatments in older adults with substance use disorders 273

Paolo Mannelli, Li-Tzy Wu and Kathleen T. Brady

Introduction 273
Tobacco 274
Alcohol 275
Opioids 277
Benzodiazepines 278
Other substances of abuse 280
Stimulants 280
Cannabis 281
Integrated treatments 281
Conclusion and future directions 284
References 285

21 The assessment and prevention of potentially inappropriate prescribing 295

Denis O’Mahony

Introduction 295
Inappropriate psychotropic use in elderly patients 296
Implicit IP criteria 297
Explicit IP criteria 298
Applying STOPP/START criteria as an intervention 299
Other methods of detection and prevention of IP in older people 307
Comprehensive Geriatric Assessment (CGA) 307
Pharmacist review and intervention 308
Prescriber education, audit and feedback 308
Computerized provider order entry with clinical decision support 309
Conclusions 309
References 310
22 Age-sensitive psychosocial treatment for older adults with substance abuse

*Kathleen Schutte, Sonne Lemke, Rudolf H. Moos and Penny L. Brennan*

Introduction

Seven characteristics of age-sensitive treatment
1 – Supportive and nonconfrontational
2 – Flexible
3 – Sensitive to gender differences
4 – Sensitive to cultural differences
5 – Focus on client functioning
6 – Holistic
7 – Focus on coping and social skills

Six components of age-sensitive psychosocial treatment
1 – Biopsychosocial assessment
2 – Treatment planning
3 – Attention to co-occurring conditions
4 – Referrals and care coordination
5 – Empirically-supported psychosocial interventions
6 – Adjuncts to psychosocial interventions

Age-segregated or mixed-age treatment

Future directions
