Please note: page numbers in italics refer to figures, and those in bold refer to tables.

accelerated idioventricular rhythm (AIVR) 113
accessory pathways 42–3, 58–9
location 77–8
Wolff–Parkinson–White syndrome 75–8
action potentials 5–6, 7, 12
acute pericarditis 124
adenosine
diagnostic aid 51–2, 55, 61	treatment 71–2
AIVR (accelerated idioventricular rhythm) 113
alcohol consumption and arrhythmias 56–8
aneurysm formation, ECG clues after myocardial infarction 117
ankylosing spondylitis 95, 97
anteroapical myocardial infarction 112–14, 116–17, 120–2
antidromic atrioventricular reciprocating tachycardia (AVRT) 43, 75, 76
aortic insufficiency 95–7
apical hypertrophic cardiomyopathy 107, 108
arrhythmias see specific arrhythmias
arrhythmogenic right ventricular dysplasia (ARVD) 39–42, 72, 109–11
ASDs see atrial septal defects (ASDs)
Ashman’s phenomenon 59
athletes
eye repolarization 138, 139
see also exercise-induced arrhythmias
atrial arrhythmias
in Duchenne muscular dystrophy 126, 127
pulmonary embolus and 130, 131
thyroid dysfunction 132, 133
atrial depolarization 10, 141
atrial ectopic beats 35, 43, 105
atrial fibrillation 56–9
digoxin toxicity 142, 143
in hypertrophic cardiomyopathy 107
in hypothermia 147, 148
mitral stenosis and 94
thyroid dysfunction 133
Wolff–Parkinson–White syndrome 43, 75, 76
atrial flutter 55
with 1:1 conduction 50–2
atrial hypertension 10
atrial injury 124
atrial myxoma 145–6
atrial rate, calculation 91
atrial rhythm, ectopic 35
atrial septal defects (ASDs) 32, 33, 34, 81
primum 81, 82–3
secundum 80–1
atrial tachycardia 55, 60–1
with atrioventricular block 142, 143, 144
atrioventricular block
adenosine-induced 52
first degree 142, 143, 144
myocardial infarction and 117, 118
atrioventricular conduction, aberrant 73, 75
atrioventricular dissociation 65, 66, 70–71, 91
atrioventricular nodal re-entry tachycardia (AVNRT) 53–5, 61
atrioventricular node
action potentials 5–6
bypass tracks 11, 43
innervation 9
PR intervals 10–11, 24, 26
atrioventricular node conduction 7, 8, 57
augmented limb leads 13–15
automaticity, increased 145, 146
autonomic nervous system 5, 9
AVNRT (atrioventricular nodal re-entry tachycardia) 53–5, 61
AVRT (atrioventricular reciprocating tachycardia) 43, 75–6
axis determination 22–4
Bazett formula for calculating corrected QT interval 68
bipolar limb leads 15
blood supply, conduction system 7–8
Brugada syndrome 38–40, 41, 44, 62–4, 72
young adults 38–40, 41, 44
bundle branches 9
bundle of His 7, 8
calcium, abnormalities 27–30, 127, 143–4
see also hypercalcemia; hypocalcemia
calcium ions 5, 12
calculation of heart rate 20
cardiac ion channel disorders (channelopathies) 38–40, 67–9
cardiomyopathy
arrhythmogenic RV dysplasia 39–42, 72, 109–11
dilated 104–5
hypertrophic 106–8
catecholaminergic polymorphic ventricular tachycardia (CPVT) 40, 41, 72
CHB (complete heart block) 65–6, 90, 91
chest leads 13–16
children, ECG findings 1, 31
chronic obstructive pulmonary disease (COPD) 35, 141
cocaine use 73, 74, 128, 138
dilated cardiomyopathy (DCM) 104–5
decremental conduction 43
deflections on ECG 14, 15
delta waves 43, 73, 75
depolarization 19–20, 32, 35
vectors 14, 15, 22
dextrocardia 32, 84–5
digoxin toxicity 142–4
hypertrophic cardiomyopathy (DCM) 104–5
DMD (Duchenne muscular dystrophy) 32, 126–7
Down syndrome, atrial septal defects 81, 83
Duchenne muscular dystrophy (DMD) 32, 126–7
early repolarization 138–9
ECG, advantages 1, 31
ectopic atrial rhythm 145, 146
Einthoven’s law 24
Einthoven’s triangle 13, 23
Eisenmenger syndrome 87, 91
electrodes 13–16
electrolyte abnormalities 27–30, 40
endocardial cushion defects 81, 83
epsilon waves 41, 42, 109, 110
escape rhythm, junctional 90, 91
exercise-induced arrhythmias 40, 69
sudden cardiac death 110
tachycardia 43–4, 70–2
f waves, oscillatory 57
Fallot’s tetralogy 32, 33, 88–9
family history
Brugada syndrome 63–4
hypertrophic cardiomyopathy 107
long QT syndrome 68–9
sudden cardiac death 39, 69
fatty/fibrofatty myocardial infiltration 39, 40–2, 110
flutter waves 52
frontal axis 22, 24
HCM (hypertrophic cardiomyopathy) 39, 41, 42, 106–8
heart block, complete (CHB) 65–6, 90, 91
heart failure, digoxin toxicity 142, 143
heart rhythm 19–21
His, bundle of 7, 8
His-Purkinje system, intervals and 24, 26
history of ECG 13
HOCM (hypertrophic obstructive cardiomyopathy) 107
holiday heart syndrome 57–8
horizontal plane, axis 23
hypercalcemia 27, 28, 29, 129, 148
hyperkalemia 11, 27–9, 64, 136–7
hypermagnesemia 27
hyperthyroidism 132–3
hypertrophic cardiomyopathy (HCM) 39, 41, 42, 106–8
hypertrophic obstructive cardiomyopathy (HOCM) 107
hypocalcemia 27, 28, 29, 40
hypokalemia 12, 27, 28, 29, 30
digoxin and 144
hypomagnesemia 27, 29, 144
hypothermia 40, 147–8
hypothyroidism 40, 129, 133
hypoxemia 8, 69, 101
idiopathic left ventricular tachycardia (ILVT) 72
implantable cardioverter defibrillators (ICDs) 64
inferior-posterior myocardial infarction 115–19
inferolateral leads 138, 139
infundibular ventricular septal defects 91
inherited disorders see family history
intervals 24–6
interventricular septum 107, 121
intracerebral bleed 128–9
intraventricular conduction delays 105
ion channel disorders 38–40, 67–9
ionic concentration gradients 5
ionic pumps 5
ischemia, in MI with RBBB 120, 121
J point 38, 138, 139
J waves 147, 148
KCNH2 (HERG) genes 41, 68–9
KCNS1 genes 41, 68
Kent bundle 43, 75
LAA see left atrial abnormality (LAA)
LAD see left anterior descending (LAD) coronary artery
LBBB (left bundle branch block) 11, 70, 71, 72
Index 153

leads 13–16
Lewis 10
localization of myocardial infarction 116
lead aVF 13, 15
P wave voltage 101, 102
P waves
  biphasic 98, 99
  at the end of QRS 53, 54
  tall and peaked 140, 141
R waves 96
ST elevation 138, 139
lead aVL 13, 15
P wave axis 84, 85
R waves 96
ST elevation 138, 139
lead aVR 13, 15
P wave voltage 101, 102
lead I 13, 15
normal sinus rhythm 21
P wave axis 84, 85, 145, 146
P wave inversion 61
R waves 96
S waves 130, 131
ST elevation 138, 139
lead II 13, 15
normal sinus rhythm 21
P wave axis 145, 146
P wave voltage 101, 102
P waves
  at the end of QRS 53, 54
  P-mitrale 93, 94
  tall and peaked 140, 141
ST elevation 138, 139
lead III 13, 15
P wave voltage 101, 102
P waves
  biphasic 98, 99
  at the end of QRS 53, 54
  tall and peaked 140, 141
Q wave and inverted T wave 130, 131
respiration changes 15
ST elevation 138, 139
lead V1 13, 15
delta waves 73, 75
low voltage 105
P wave deflection 140, 141
P wave voltage 101, 102
QRS complex
  positive 77–8
  widening 73, 75
QRS prolongation 42
R waves
  pronounced 32
  R/S ratio 34, 96, 98, 99
rSR’ pattern 80, 81
rSr’ pattern 80, 81, 82, 83
rsR’ pattern 82, 83
rSr’ pattern 33
ST elevation 120, 121, 138, 139
T waves
  inversion 109, 110
  negative 62, 63
  peaked 112, 113
lead V2 13, 15
delta waves 73, 75
low voltage 105
P wave deflection 140, 141
P wave voltage 101, 102
QRS complex
  positive 77–8
  widening 73, 75
QRS prolongation 42
R=S 101, 102
rSr’ pattern 33
ST elevation 112, 113, 120, 121, 138, 139
ST-T abnormalities 120, 121
T waves
  inversion 109, 110
  negative 62, 63
  peaked 112, 113
lead V3 13, 15
delta waves 73, 75
low voltage 105
Osborn waves 147, 148
QRS complex, widening 73, 75
QRS prolongation 42
ST elevation 112, 113, 120, 121, 138, 139
ST-T abnormalities 120, 121
T waves
  inversion 109, 110
  peaked 112, 113
lead V4 13, 15
delta waves 73, 75
low voltage 105
Osborn waves 147, 148
QRS complex, widening 73, 75
QRS prolongation 42
R waves pronounced 96
ST depression 42
ST elevation 138, 139
T wave inversion 42
lead V5 13, 15
low voltage 84, 85
Osborn waves 147, 148
prominent voltage 105
R waves pronounced 96
S wave voltage raised 101, 102
ST depression 42
ST elevation 138, 139
T wave inversion 42
lead V6 13, 15
low voltage 84, 85
Osborn waves 147, 148
prominent voltage 105
R waves pronounced 96
S wave voltage raised 101, 102
lead V6 (cont’d)
ST depression 42
ST elevation in early repolarization 138, 139
T wave inversion 42
lead VF 13, 15
lead VL 13, 15
lead VR 13, 15
left anterior descending (LAD) coronary artery 8, 116
occlusion 112, 113–14, 120, 121
left atrial abnormality (LAA)
aortic insufficiency 95–7
hypertrophic cardiomyopathy 106–8
young adults 36
left atrial (LA) enlargement 90, 91
aortic insufficiency 95–7
dilated cardiomyopathy 105
mitral stenosis 93, 94
left axis deviation 23–4, 35, 95, 96
hypertrophic cardiomyopathy 106–8
primum atrial septal defect 82–3
see also left ventricular hypertrophy
left bundle branch 9
left bundle branch block (LBBB) 11, 70, 71, 72
left circumflex coronary artery 7, 116
left ventricular dilation 105
left ventricular hypertrophy (LVH)
aortic insufficiency 95, 96–7
diagnostic criteria 35–6, 96
hypertrophic cardiomyopathy 39, 42, 106–8
in patent ductus arteriosus 86, 87
ventricular septal defects 90, 91
left ventricular outflow tract (LVOT) obstruction 42, 107, 108
left ventricular outflow tract (LVOT) tachycardia 44, 71, 72
Lewis leads for assessing atrial activity 10
limb leads 13–15
left ventricular hypertrophy diagnosis 96
low QRS voltage 105
P wave axis 84, 85
reversal 85
long QT syndrome (LQTS) 39–41, 67–9
acquired 29
congenital 12
differential diagnosis 72
gene mutations 64
Lown–Ganong–Levine (LGL) syndrome 11, 78
lung diseases see pulmonary conditions
LVH see left ventricular hypertrophy (LVH)
medications
complete heart block caused by 66
PR interval and 11
ST segment elevation induced by 63–4
see also digoxin toxicity
membranous ventricular septal defects 91
MI see myocardial infarction (MI)
mitral stenosis (MS) 32, 93–4
mitral valve disorders
atrial septal defects and 83
endocardial cushion defects 81, 83
with myxomas 146
ventricular septal defects and 91
monomorphic ventricular tachycardia 43
MS (mitral stenosis) 32, 93–4
multifocal atrial tachycardia 57
muscular dystrophy 126–7
muscular ventricular septal defects 91
myocardial cells
fatty infiltration 39, 40–2
voltage changes 14, 15
myocardial damage
fibrofatty infiltration 110
localization 113, 115
myocardial infarction (MI)
 anterior 112–14, 116–17, 120–2
with bundle branch block 120–2
differential diagnosis 62, 63, 126, 127, 139
inferior-posterior 115–19
lead positions 15
localization of 116
posterior 32
ST elevation patterns 124
myocardial ischemia, ST segment 12
myocarditis, acute 65–6
myosin-binding protein C genes 107
myxoma 145–6
narrow complex tachycardia 43
net deflection, calculation of 23, 24
nodal artery 7, 8
non-pacemaker cells 6
normal ECG waveform 10–12, 21
orthodromic atrioventricular reciprocating tachycardia (AVRT) 43, 75–6
orthopnea 104, 105
Osborn waves 29, 147, 148
ostium primum atrial septal defect 32, 81, 82–3
ostium secundum atrial septal defect 32, 80–1
P-mitrale 36, 93, 94
P-pulmonale 35, 130, 131, 140–1
P wave axis
determination of 22
inferior and leftward 84, 85, 145, 146
negative 142, 143
normal sinus rhythm 146
P wave voltage 101, 102
P waves 10
biphasic 98, 99
dissociation from QRS complex 90, 91
faster than ventricular rate 65, 66
increased duration 136, 137
inverted 43, 61
lack of 56, 57
normal sinus rhythm 21
notched 35, 36, 96
regular non-conducted 61
sawtooth pattern 55
superimposed on QRS complex 53, 54
tall and peaked 35, 140, 141
wide and flat 28, 29, 30
pacemaker cells 5–6
parasympathetic nervous system 5, 9
patent ductus arteriosus (PDA) 32, 33, 86–7
PE (pulmonary embolus) 35, 64, 130–1, 141
pericarditis 12, 123–4, 139
potassium 27–30, 143–4
see also hyperkalemia; hypokalemia
potassium channel disorders 40, 67–9
potassium ions 5
PR intervals 10–11, 24, 25, 26
depression 124
prolonged 142, 143, 147, 148
random 65, 66, 91
short 43, 73, 75
pre-excitation 58–9
pre-excitation syndromes 32, 39, 40, 42–3, 75
precordial leads
in Brugada syndrome 38, 62, 63
in dextrocardia 84, 85
hypertrophic cardiomyopathy 106, 107
in LVH 96
in patent ductus arteriosus 86, 87
right-sided lead placement 117
premature ventricular contractions (PVCs) 39, 40–2, 109, 110
PS (pulmonic stenosis) 32, 98–100
pseudo-dextrocardia 84, 85
pseudo-S waves 53, 54
pulmonary disease
P-pulmonale in 141
pulmonary embolus (PE) 35, 64, 130–1, 141
pulmonary hypertension 32, 97, 101–2
pulmonic stenosis (PS) 32, 98–100
pulmonic valve 44, 98, 99
Purkinje fibers 7, 8, 9
His–Purkinje system 24, 26
PVCs (premature ventricular contractions) 39, 40–2, 109, 110
Q waves 120, 121
deep 39, 41, 42, 106, 107, 126, 127
QRS axis 22–3
development 81, 83, 86, 87
QRS complexes 11–12
amplitudes 56, 57
heart rate calculation 20–1
increasing voltage 35
irregular 126, 127
late positive deflections 147, 148
normal sinus rhythm 21
P waves dissociated from 90, 91
P waves faster than 65, 66
P waves superimposed on 53, 54
widening 43, 73, 75, 136, 137
hyperkalemia 28, 29, 30
QRS intervals 24, 25
prolonged 42, 109, 110
young adults 33
QRS-ST junction 138, 139
QRS vector displacement 34
QRS voltage 105
QRS wave morphology 84, 85
QRS/T angle 96
QT intervals 24, 25, 26
prolonged 29, 30, 128, 129, 147, 148
shortened 29, 142, 143, 144
QTc (corrected) intervals 68, 69, 106, 107
“R on T” phenomenon 113, 114
R wave voltage 101, 102
R waves
large 34, 86, 87, 96, 130, 131
large terminal 32
pronounced 32, 80, 81
smaller than T waves 28, 29, 30
tall 34, 126, 127
RAA (right atrial abnormality) 35, 101, 102
RBBB see right bundle branch block (RBBB)
reperfusion, post-myocardial infarction 116, 117, 118, 121
repolarization
abnormalities 107–8
early 138–9
repolarization vectors 14, 15, 22
respiration 15
rheumatic heart disease 94
right atrial abnormality (RAA) 35, 101, 102
right atrial enlargement 87, 88, 89, 141

tetralogy of Fallot 32, 33, 88–9
thyroid dysfunction 40, 129, 132–3
torsades des pointes 29, 40, 68, 72
triangle of Koch 8
tricuspid valve disorders 35, 81, 91, 141
U waves 12
  accentuation 29, 30
  amplitude increased 142, 143, 144
unconsciousness, hypothermia 147–8
unipolar chest leads 15
vagus nerve 9
vagial tone, PR interval and 11
valvular heart disease, young adults 32
ventricular arrhythmias
  arrhythmogenic right ventricular dysplasia 42, 110
differential diagnosis 29, 30, 113
digoxin toxicity 142, 143, 144
dilated cardiomyopathy 105
Duchenne muscular dystrophy 126, 127
hyperkalemia 136, 137
hypertrophic cardiomyopathy 39, 42
myocardial infarction and 117, 118
ventricular septal defects and 91–2
young adults 39
ventricular conduction system 9
ventricular depolarization 11
ventricular fibrillation 43, 72, 148
ventricular flutter 51
ventricular injury, ST elevation patterns 116, 124
ventricular pre-excitation 75–8
ventricular repolarization 12, 29
ventricular septal defects (VSDs) 32, 90–2
  atrial septal defects and 83
tetralogy of Fallot 88, 89
ventricular strain pattern 95, 96
ventricular tachycardia 40, 41, 70–2
  in long QT syndrome 68
  with normal baseline ECG 43–4
vertical plane, axis determination 22
voltage changes 14, 15, 22
wandering atrial pacemaker 10, 57, 146
Wolff–Parkinson–White (WPW) syndrome 32, 33, 39, 40, 42–3, 58, 73–8
