accuracy
diagnostic see diagnostic accuracy
technical 7–9
action thresholds 57–8
add-on tests, evaluation 9, 10
aggressiveness of disease, and
screening tests 73
analytical sensitivity 8
analytical specificity 8
analytical variability 8–9
anchoring error in diagnostic
problem-solving 57
answerable clinical questions 16–17
area under the curve (AUC) 51
availability error in diagnostic
problem-solving 57
Bayesian reasoning 42–5
Bayes’ theorem 42–3
bedside testing 4
before–after studies 12
behavioural effects of tests 12–14
bias
confirmatory 57
differential reference (double gold
standard) 31–2
effects 32–3
incorporation 29–30
lead-time 70–2
length-time 72–3
observer (test review) 30–1
screening tests 69–73
slippery 72
sources 26–32
spectrum (selection) 26–7
sticky 72
study type 69–70
and variability, difference between
23
verification (referral/work-up)
28–9
volunteer (selection) 69
bivariate random effects models
86–7
budget impact analysis 14
case-control studies 32–3
categorization 55–6
clinical practice, using diagnostic
information in 53
action thresholds versus testing
thresholds 57–8
combining test results, methods
for 58–60
multivariable analyses 60–2
prediction rules, development of
62–4
prediction rules, selection of
64–5
problem-solving strategies 55–7
validity of data 54–5
clinical prediction rules 61–2
assessing the impact of 63–4
deriving 62–3
development of 62–4
logistic regression 60
selection of 64–5
validation 63
clinical questions 16–17
search strategies 20
selecting relevant studies 22
clinical utility 12
clinical validity see diagnostic
accuracy
cognitive effects of tests 12–14
combining test results 58–60
concurrent validity 54
confirmatory bias in diagnostic problem-solving 57
confirming a diagnosis 2
consecutive recruitment of patients 27
cost-benefit analysis 14
cost-effectiveness of tests 7, 14
cost minimization analysis 14
cost utility analysis 14
cross-sectional cohort studies 10–11
cue blindness 57
cut-points
dichotomized data 47
ROC curves 48, 49–50, 51
diagnostic accuracy
Bayesian reasoning 42–5
biases 32
choice of measures 38–40
evaluation of tests 7, 10–12
likelihood ratios, interpretation 44–52
outcome measures 36–40
prevalence, effect on predictive values 40–1
referral filter 42
ROC curves 48–52
search filters 20–1
STARD guidelines 24–5, 80, inside covers
target condition’s severity’s effect on 42
time’s effect on 41–2
two by two tables 34–6
diagnostic odds ratio (DOR) 38, 39–40
differential reference bias 31–2
double gold standard (differential reference) bias 31–2
financial issues 14
economic issues 14
external validity, multivariable analysis 60
incorporation bias 29–30
internal validity
multivariable analysis 60
sources 24
lead-time bias 70–2
length-time bias 72–3
observer bias 30–1
odds ratio (OR) 38, 39–40
referral (verification) bias 28–9
selection (volunteer) bias 69
sensitivity 36, 38–9
analytical 8
of meta-analyses 86
in ROC curves 48–52, 82
of search filters 21
spectrum bias 26
specificity 36, 38–9
analytical 8
of meta-analyses 86
in ROC curves 48–52, 82
of search filters 21
spectrum bias 26
target condition
clinical questions 16, 17
selecting relevant studies 22
severity, effect on diagnostic accuracy 42
technical accuracy, evaluation of 7–9
testing thresholds 57–8
test review (observer) bias 30–1
thesaurus terms in search strategies 20
systematic reviews 76
threshold effect 81
time
effect on diagnostic accuracy 41–2
importance in screening tests 66
total mortality 68, 71–2
triage 2
evaluation of tests 9, 10
ROC curves 51
true negatives
screening tests 67
two by two tables 34, 35
true positives
screening tests 67
two by two tables 34, 35
two by two tables 34–6
types of diagnostic tests 3

uncertainty, diagnostic 54
under-testing 55

unrecognized symptomatic disease, screening for 66
validation of clinical prediction rules 63, 65
validity
assessing 23
clinical see diagnostic accuracy
external 60
internal 24, 60
variability and bias, difference between 23
verification bias 28–9
volunteer bias 69
work-up (verification) bias 28–9
