Contents

Preface  xiii

1  Basic Ideas of Mathematical Statistics  1
  1.1  Statistical Population and Samples  2
  1.1.1  Concrete Samples and Statistical Populations  2
  1.1.2  Sampling Procedures  4
  1.2  Mathematical Models for Population and Sample  8
  1.3  Sufficiency and Completeness  9
  1.4  The Notion of Information in Statistics  20
  1.5  Statistical Decision Theory  28
  1.6  Exercises  32
  References  37

2  Point Estimation  39
  2.1  Optimal Unbiased Estimators  41
  2.2  Variance-Invariant Estimation  53
  2.3  Methods for Construction and Improvement of Estimators  57
  2.3.1  Maximum Likelihood Method  57
  2.3.2  Least Squares Method  60
  2.3.3  Minimum Chi-Squared Method  61
  2.3.4  Method of Moments  62
  2.3.5  Jackknife Estimators  63
  2.3.6  Estimators Based on Order Statistics  64
  2.3.6.1  Order and Rank Statistics  64
  2.3.6.2  L-Estimators  66
  2.3.6.3  M-Estimators  67
  2.3.6.4  R-Estimators  68
  2.4  Properties of Estimators  68
  2.4.1  Small Samples  69
3  Statistical Tests and Confidence Estimations  79
3.1  Basic Ideas of Test Theory  79
3.2  The Neyman–Pearson Lemma  87
3.3  Tests for Composite Alternative Hypotheses and One-Parametric Distribution Families  96
3.3.1  Distributions with Monotone Likelihood Ratio and Uniformly Most Powerful Tests for One-Sided Hypotheses  96
3.3.2  UMPU-Tests for Two-Sided Alternative Hypotheses  105
3.4  Tests for Multi-Parametric Distribution Families  110
3.4.1  General Theory  111
3.4.2  The Two-Sample Problem: Properties of Various Tests and Robustness  124
3.4.2.1  Comparison of Two Expectations  125
3.4.3  Comparison of Two Variances  137
3.4.4  Table for Sample Sizes  138
3.5  Confidence Estimation  139
3.5.1  One-Sided Confidence Intervals in One-Parametric Distribution Families  140
3.5.2  Two-Sided Confidence Intervals in One-Parametric and Confidence Intervals in Multi-Parametric Distribution Families  143
3.5.3  Table for Sample Sizes  146
3.6  Sequential Tests  147
3.6.1  Introduction  147
3.6.2  Wald’s Sequential Likelihood Ratio Test for One-Parametric Exponential Families  149
3.6.3  Test about Mean Values for Unknown Variances  153
3.6.4  Approximate Tests for the Two-Sample Problem  158
3.6.5  Sequential Triangular Tests  160
3.6.6  A Sequential Triangular Test for the Correlation Coefficient  162
3.7  Remarks about Interpretation  169
3.8  Exercises  170
References  176

4  Linear Models – General Theory  179
4.1  Linear Models with Fixed Effects  179
4.1.1  Least Squares Method  180
4.1.2  Maximum Likelihood Method  184
4.1.3 Tests of Hypotheses 185
4.1.4 Construction of Confidence Regions 190
4.1.5 Special Linear Models 191
4.1.6 The Generalised Least Squares Method (GLSM) 198
4.2 Linear Models with Random Effects: Mixed Models 199
4.2.1 Best Linear Unbiased Prediction (BLUP) 200
4.2.2 Estimation of Variance Components 202
4.3 Exercises 203
References 204

5 Analysis of Variance (ANOVA) – Fixed Effects Models (Model I of Analysis of Variance) 207
5.1 Introduction 207
5.2 Analysis of Variance with One Factor (Simple- or One-Way Analysis of Variance) 215
5.2.1 The Model and the Analysis 215
5.2.2 Planning the Size of an Experiment 228
5.2.2.1 General Description for All Sections of This Chapter 228
5.2.2.2 The Experimental Size for the One-Way Classification 231
5.3 Two-Way Analysis of Variance 232
5.3.1 Cross-Classification (A x B) 233
5.3.1.1 Parameter Estimation 236
5.3.1.2 Testing Hypotheses 244
5.3.2 Nested Classification (A>B) 260
5.4 Three-Way Classification 272
5.4.1 Complete Cross-Classification (A x B x C) 272
5.4.2 Nested Classification (C<B<A) 279
5.4.3 Mixed Classification 282
5.4.3.1 Cross-Classification between Two Factors Where One of Them Is Subordinated to a Third Factor ((B<A) x C) 282
5.4.3.2 Cross-Classification of Two Factors in Which a Third Factor Is Nested (C<(A x B)) 288
5.5 Exercises 291
References 291

6 Analysis of Variance: Estimation of Variance Components (Model II of the Analysis of Variance) 293
6.1 Introduction: Linear Models with Random Effects 293
6.2 One-Way Classification 297
6.2.1 Estimation of Variance Components 300
6.2.1.1 Analysis of Variance Method 300
6.2.1.2 Estimators in Case of Normally Distributed $Y$ 302
6.2.1.3 REML Estimation 304
6.2.1.4 Matrix Norm Minimising Quadratic Estimation 305
6.2.1.5 Comparison of Several Estimators 306
6.2.2 Tests of Hypotheses and Confidence Intervals 308
6.2.3 Variances and Properties of the Estimators of the Variance Components 310
6.3 Estimators of Variance Components in the Two-Way and Three-Way Classification 315
6.3.1 General Description for Equal and Unequal Subclass Numbers 315
6.3.2 Two-Way Cross-Classification 319
6.3.3 Two-Way Nested Classification 324
6.3.4 Three-Way Cross-Classification with Equal Subclass Numbers 326
6.3.5 Three-Way Nested Classification 333
6.3.6 Three-Way Mixed Classification 335
6.4 Planning Experiments 336
6.5 Exercises 338

References 339

7 Analysis of Variance – Models with Finite Level Populations and Mixed Models 341
7.1 Introduction: Models with Finite Level Populations 341
7.2 Rules for the Derivation of $SS$, $df$, $MS$ and $E(\text{MS})$ in Balanced ANOVA Models 343
7.3 Variance Component Estimators in Mixed Models 348
7.3.1 An Example for the Balanced Case 349
7.3.2 The Unbalanced Case 351
7.4 Tests for Fixed Effects and Variance Components 353
7.5 Variance Component Estimation and Tests of Hypotheses in Special Mixed Models 354
7.5.1 Two-Way Cross-Classification 355
7.5.2 Two-Way Nested Classification $B < A$ 358
7.5.2.1 Levels of $A$ Random 360
7.5.2.2 Levels of $B$ Random 361
7.5.3 Three-Way Cross-Classification 362
7.5.4 Three-Way Nested Classification 365
7.5.5 Three-Way Mixed Classification 368
7.5.5.1 The Type $(B < A) \times C$ 368
7.5.5.2 The Type $C < AB$ 371
7.6 Exercises 374

11 Multiple Decision Problems 513
11.1 Selection Procedures 514
11.1.1 Basic Ideas 514
11.1.2 Indifference Zone Formulation for Expectations 516
11.1.2.1 Selection of Populations with Normal Distribution 517
11.1.2.2 Approximate Solutions for Non-normal Distributions and 529
11.1.3 Selection of a Subset Containing the Best Population with Given Probability 531
11.1.3.1 Selection of the Normal Distribution with the Largest Expectation 534
11.1.3.2 Selection of the Normal Distribution with Smallest Variance 534
11.2 Multiple Comparisons 539
11.2.1 Confidence Intervals for All Contrasts: Scheffé’s Method 542
11.2.2 Confidence Intervals for Given Contrasts: Bonferroni’s and Dunn’s Method 548
11.2.3 Confidence Intervals for All Contrasts for : Tukey’s Method 550
11.2.4 Confidence Intervals for All Contrasts: Generalised Tukey’s Method 553
11.2.5 Confidence Intervals for the Differences of Treatments with a Control: Dunnnett’s Method 554
11.2.6 Multiple Comparisons and Confidence Intervals 556
