\( t \), 84
two-tailed, 83
\( \chi^2 \), 85–89, 330, 568
STATS
confidence intervals, 72–74
histogram data, 32–33
hypothesis testing, 92–93
Stochastic model, 197
Storage optimization, 586
Survey planning and design, 157, 431–432, 487
Systematic error
in azimuths, 535
definition of, 4
examples of, 4, 5–7
in leveling, 163–166, 536–537
in vertical angles, 535
\( t \) distribution, 61–62, 84, 639–640
Table
confidence intervals, 650–654
\( F \) distribution, 642–648
standard normal distribution, 635–636
\( t \) distribution, 640
\( \chi^2 \), 638
Tabular method, 203
Tau criterion, 474
Taylor’s theorem
nonlinear equations and, 619–620
use of, 207–208, 260, 285, 287
Test decision, 80
Test statistics, 79–80
Three-dimensional conformal
coordinate transformation, 401–407, 509, 546–547
general least squares method, 509, 546
Three-dimensional geodetic network
adjustment, 517, 537–538
Transformation between reference
frames, 545–546
TRANSIT, 343
Traverse
error in angular misclosure, 127–130, 146–148, 152–153
error in latitude and departure, 144–145
error in linear misclosure, 146, 148–151, 153–154
estimating errors using EXCEL®, 156
misclosure in, 127–130, 146–156
Triangulation adjustment, 283
Trigonometric leveling, error in, 171–174
Trilateration adjustment, 257
Triple differencing, 345
True value, definition of, 19
Two-dimensional
affine coordinate transformation, 395, 507
conformal coordinate
transformation, 389–390, 392, 503–504
projective coordinate
transformation, 398–399, 508
Type I error, 80
Type II error, 80
Valid parameters, 407–411

Variance
- alternative formula for, 22–24
- definition of, 20
- example of, 27
- population, 20, 85–86, 330
- reference, 180, 330
- sample, 21
- of unit weight, 181, 231–232, 249, 330

Vertical, deflection of, 535

Weight
- in angles, 185
- definition of, 179
- in differential leveling, 186–187
- relation to correction, 183
- relation to standard error, 183
- relation to variance, 179, 183

Weight matrix, equivalent, 180, 499

Weighted mean, 181–183
