Preface xiii

Part 1 The Principles of the Use of Exercise in Musculoskeletal Disorders 1

1 Introduction 3
John Gormley

Historical perspectives 3
History of exercise 3
Exercise and physiotherapy 4
The benefits of exercise 4
References 5

2 The Role of Exercise in Managing Musculoskeletal Disorders 6
Fiona Wilson

Section 1: Introduction and Background 6
Evidence for the role of exercise in managing musculoskeletal disorders 6

Section 2: Practical Application of Exercise 8
Components of fitness 8
Exercise prescription 8
Components of an exercise session 8
Warm-up 9
Endurance phase 9
Recreational activities 9
Cool-down 9
Prescription of aerobic exercise 9
Type of exercise 9
Exercise intensity 11
Exercise duration 11
Exercise frequency 11
Progression of the programme 11
Prescription of muscle strength and endurance exercise 12
Types of resistance 12
Isometric exercise 12
Isotonic exercise 13
Plyometric exercise 13
Open versus closed kinetic chain exercise 13
Intensity, frequency and volume of exercise 14
Prescription of range of motion or flexibility exercise 14
Passive exercise 15
Active range of motion 15
Active-assisted range of motion exercise 15
Types of stretching 15
Frequency, intensity and duration 16
Prescription of proprioception, co-ordination and balance exercise 17
References 17

3 Measurement and Assessment in the Management of Musculoskeletal Disorders 19
Alison H. McGregor

Introduction 19
What is normal function? 19
Biomechanics of movement 21
Observed analysis 22
Kinematic assessment methods and measurement tools 23
Goniometers 23
Imaging 24
Optical motion analysis systems 25
How can kinematic assessments be used? 25
Assessment of muscles 26
References 27

Part 2 Regional Application of Exercise 29

4 The Cervical Spine 31
Kirsty Peacock

Section 1: Introduction and Background 31
Cervical spine dysfunction and neuromuscular impairment 32
Efficacy of exercise for cervical dysfunction 32
Aerobic exercise 32
Muscle strength and endurance training 32
Range of movement and flexibility exercises 33
Sensorimotor and proprioceptive exercise 33

Section 2: Practical Use of Exercise 33
Aerobic exercise 33
Endurance and strength training 34
Endurance training 34
Strength training 39
Range of movement/flexibility exercises 40
Sensorimotor and proprioceptive rehabilitation 43
Motor control 44

Section 3: Case Studies and Student Questions 46
Case study 1 46
Case study 2 48
Case study 3 48
Student questions 50
References 50

5 The Thoracic Spine and Rib Cage 53
Fiona Wilson

Section 1: Introduction and Background 53
Evidence for the use of exercise in the management of disorders of the thoracic spine and rib cage 53
Aerobic exercise 55
Muscle strength and endurance 55
Range of motion and flexibility 56
Balance and proprioception 56
Disorders of the thoracic spine 56
Scheuermann’s disease 57
Scoliosis 57
Ankylosing spondylitis 57

Section 2: Practical Use of Exercise 57
Assessment of the patient 58
Posture 58
Assessment of aerobic capacity 58
Assessment of endurance 58
Assessment of flexibility 58
The exercise programme 59
Early phase 59
Intermediate phase 60
Late phase 61

Section 3: Case Studies and Student Questions 63
Case study 1 63
Case study 2 64
Case study 3 65
Student questions 65
References 65

6 The Lumbar Spine 67
Fiona Wilson

Section 1: Introduction and Background 67
Evidence for the use of exercise in the management of low back pain 67
Aerobic exercise 69
Muscle strength and endurance 71
Range of motion and flexibility 73
Balance and proprioception 73
Summary 74
Lumbar spine injury 74
Vertebrae 75
Neural arch 75
Disc 75
Ligaments 75
End plates 75

Section 2: Practical Use of Exercise 75
Assessment of the patient 75
Assessment of endurance 75
Lateral musculature test 76
Flexor endurance test 76
Back extensor test 76
Assessment of aerobic capacity 76
Assessment of motor control 76
Assessment of proprioception 76
Assessment of flexibility 77
Design of an exercise programme 79

**Section 3: Case Studies and Student Questions**  
Case study 1 138  
Case study 2 139  
Case study 3 139  
Student questions 139  
References 140

**10 The Hip and Pelvic Complex**  
Kevin Sims

### Section 1: Introduction and Background
Evidence of exercise efficacy in the management of hip pain 141  
**Aerobic exercise** 142  
**Muscle strength and endurance** 142  
**Range of motion and flexibility** 143  
**Balance and proprioception** 143  
Common injuries/conditions 143

Evidence of exercise efficacy in the management of pelvic girdle pain 144  
**Aerobic exercise** 145  
**Muscle strength and endurance** 145  
**Range of motion and flexibility** 145  
**Balance and proprioception** 145  
Common pelvic conditions/injuries 146

### Section 2A: Practical Use of Exercise Around the Hip
Aerobic exercise 146  
Strengthening exercise 146  
**Early phase** 146  
**Later phase** 148  
Range of motion and flexibility exercises 150  
Proprioceptive and balance training 151  
Summary 151

### Section 2B: Practical Use of Exercise Around the Pelvis
Aerobic exercise 151  
Strengthening exercise 152  
Range of motion and stretching exercises 152  
Proprioception exercises 153

### Section 3: Case Studies and Student Questions
Case study 1 154  
Case study 2 155  
Case study 3 156  
Student questions 156  
References 156

**11 The Knee**  
Mandy Johnson

### Section 1: Introduction and Background
Evidence for the use of exercise in the rehabilitation of knee injuries 159  
**Aerobic exercise** 160  
**Balance and proprioception** 161  
Range of movement and flexibility exercises 162  
**Muscle strength and endurance** 162  
Disorders of the knee joint complex 164  
Ligament sprains 164  
Meniscus injuries 165  
Osteoarthritis of the knee 165  
Anterior knee pain 165  
Muscle injuries 166  
Quadriceps 166  
The hamstrings 167

### Section 2: Practical Use of Exercise
Osteoarthritis of the knee joint 167  
**Aerobic exercise** 167  
Range of motion and flexibility exercises 168  
**Proprioception and balance exercise** 170  
**Muscle strength and endurance exercise** 170  
Patellar tendinopathy 174  
Patellofemoral pain syndrome 176  
**Early phase** 176  
**Late and functional phase** 176  
Anterior cruciate ligament injury 178  
**Phase 1 (weeks 1–4) – protection** 178  
**Phase 2 (weeks 5–8) – early strength training** 180  
**Phase 3 (weeks 9–12) – intensive strength training** 180  
**Phase 4 (weeks 13–16) – intensive strength training and return to sports** 181

### Section 3: Case Studies and Student Questions
Case study 1 182  
Case study 2 182  
Case study 3 183  
Student questions 184  
References 184
12 The Foot and Ankle Complex 187

Ruth Magee

Section 1: Introduction and Background 187
Evidence for the use of exercise in the rehabilitation of foot and ankle injuries 187
Aerobic exercise 188
Muscle strength and endurance 188
Range of motion and flexibility 189
Balance and proprioception 189
Common conditions 190
Ankle inversion injury 190
Pes Planus, plantar fasciosis and hallux valgus 191
Achilles’ tendinopathy 191

Section 2: Practical Use of Exercise 192
Ankle inversion injury 192
Early rehabilitation 192
Functional and late rehabilitation 200
Planus and plantar fasciosis and hallux valgus 201
Rehabilitation 201
Achilles’ tendinopathy 203
Aerobic exercise 203
Range of motion and flexibility 203
Muscle strength and endurance 203
Proprioception 204

Section 3: Case Studies and Student Questions 204
Case study 1 204
Case study 2 205
Case study 3 206
Student questions 207
References 207

Part 3 Exercise Therapy in Special Populations 211

13 Musculoskeletal Disorders in the Developing Child 213
Juliette Hussey and Mandy Johnson
Physical activity in children – health benefits and guidelines 213
Health benefits of physical activity in childhood 213
Physical activity guidelines in children 213
Growth and maturation 215
Monitoring and measuring growth 215
The adolescent growth spurt 216
Peak height velocity 216
Methods of establishing maturity 216
Musculoskeletal disorders in children 217
Specific musculoskeletal disorders in children 218
General considerations in the exercise management of children 219
References 220

14 Musculoskeletal Disorders in the Cardiac and Respiratory Patient 223
Juliette Hussey
Introduction 223
Musculoskeletal disorders in respiratory disease 223
Limitations in physical functioning in patient with respiratory disease 223
Range of movement and respiratory disease 224
Muscle function and respiratory disease 224
Bone health and respiratory disease 225
Exercise management of patients with respiratory disease 226
Cardiac disease and musculoskeletal dysfunction 227
Limitations in physical functioning in patients after cardiac surgery and in those with cardiac disease 227
Exercise management of musculoskeletal conditions in patients with cardiac disease 228
References 229

15 Musculoskeletal Disorders in Obesity 231
Grace O’Malley
Introduction 231
Musculoskeletal assessment 232
Physical effects associated with obesity 232
Impaired joint range of movement and flexibility 232
Oedema 233
Impaired balance and postural stability 233
Reduced muscle and bone strength 233
Altered biomechanics and gait 234
Musculoskeletal pain 235
Diabetes mellitus 235
16 Osteoporosis
Nicholas J. Mahony

Introduction 242
Bone structure 242
  Bone ultra-structure 243
  Bone matrix 243
  Bone surfaces 243
  Bone cells 243
Bone development and ageing 244
Bone remodelling 245
  Remodelling and osteoporosis 246
Osteoporosis 247
  Aetiology 247
  Clinical presentation 247
  Investigation 248

Treatment and prevention of osteoporosis 248
  Nutritional factors 250
  Practical guidelines 250
  Drug therapies 250
  Exercise and bone health 251
  General recommendations 251
  Targeted bone loading 252
  Optimum bone accrual in childhood and adolescence 252
  Prevention of bone loss through adulthood 253
  Slowing age-related bone loss and prevention of falls in older people 253
Exercise programmes for osteoporosis: key information sources 253
Summary 254
