Index

Long chain polyunsaturated fatty acids (LCP, LCPUFA)
- adrenoleukodystrophy, 643
- allergy prevention, 810
- cystic fibrosis, 235
- lactating mother, 722
- learning skills, 742
- long chain fatty acid oxidation disorders, 598
- peroxisomal biogenesis disorders, 647–648
- preterm infants, 86, 90
- vegan diets, 750

Long chain triglyceride (LCT)
- content of foods, 299

Lorenzo’s oil, 640–646

Low amino acid diets, for PKU, MSUD, HCU, HTI, HTII, HTIII, 416–456
- amino acid supplements, 419–420
- amino acid tolerance, 422–426
- conditionally indispensible amino acids, 420–422
- essential fatty acids and long chain polyunsaturated fatty acids, 426
- exchange systems for natural protein, 424–428
- foods allowed without measurement, 429–430
- infant with HCU, 438–440
- infant with HTI, 440–441
- infant with PKU, 433–436
- infant with MSUD, 436–438
- intercurrent illness, 449–454
- late diagnoses, HCU and HTI, 432–433
- monitoring, 431–443
- micronutrients, 429–431
- protein requirements, 416–419
- school children and teenagers, 446–450
- weaning solids and second stage amino acid supplement, 442–445
- toddler feeding problems, 443–446

Low birthweight, 83
- Low glucose-galactose diet, 124–126
- Low lactose diet
  - lactose intolerance, 106, 124
  - galactosaemia, 530–532
- Low LCT diet
  - abetalipoproteinaemia, 625–628
  - chylomicon retention disease, 628–630
  - chylothorax, 293–301
  - familial hypercholesterolaemia, 632–634
  - familial lipoprotein lipase deficiency, 630–632
  - intestinal lymphangiectasia, 125–127
  - long chain fatty acid oxidation disorders, 595–607
  - Low leucine diet for maple syrup urine disease, see Low amino acid diets
  - Low methionine diet for homocystinuria, see Low amino acid diets
  - Low phenylalanine diet for phenylketonuria, see Low amino acid diets
  - Low protein diet for tyrosinaemia, see Low amino acid diets
  - Low sucrose diet in sucrase-isomaltase deficiency, 122–123
  - Lower leg length, measurement, 781
  - Macrobio (Zen) diet, 750
  - Malabsorption
    - acute diarrhoea, 105
    - cancer, 661
    - carbohydrate intolerances, 121
    - coeliac disease, 117
    - congenital chloride losing diarrhoea, 106
    - congenital heart disease, 287, 302
    - Crohn’s disease, 131
    - cystic fibrosis, 223, 227, 232, 240
    - eosinophilic gastroenteritis, 109
    - gut motility disorders, 140
    - HIV, 345, 349
    - immunodeficiency syndromes, 336, 337, 338
    - intestinal lymphangiectasia, 125
    - lipid disorders, 625, 630
    - liver diseases, 161, 163, 169, 171, 174–179, 183–184
  - Medium chain acyl-CoA dehydrogenase deficiency (MCADD), 590–594
  - at risk neonate, 591
  - avoidance of MCT, 592, 593
  - dietary management, 591–594
  - intercurrent illness, 592–593
  - Medium chain fat/triglyceride (MCT), emulsion, 18
  - chylothorax, 294, 296–305
  - disorders of long fatty acid oxidation, 595–606
  - enteropathy, 112–113, 117, 129
  - intestinal lymphangiectasia, 126
  - ketogenic diet, 355, 362, 364–370
  - lipid disorders, 626, 629–632
  - liver diseases, 167–168, 171–181, 185
  - MCADD, 592, 593
  - pancreatitis, 191, 193, 194
  - parenteral nutrition, 54–56
  - preterm infants, 86, 90
  - short bowel syndrome, 156, 157
  - pathway of absorption, 294
  - Methionine, see Homocystinuria
  - Methylmalonic acidemia, 469–476
  - classification, biochemistry, genetics, 469–470
  - dietary management, see Organic acidemias
  - outcomes and complications, 470
- Malonyl-CoA decarboxylase deficiency (MLYCD), 609
- Maple syrup urine disease (MSUD), 399–465
- Medium chain acyl-CoA dehydrogenase deficiency (MCADD), 590–594
- at risk neonate, 591
- avoidance of MCT, 592, 593
- dietary management, 591–594
- intercurrent illness, 592–593
- Medium chain fat/triglyceride (MCT), emulsion, 18
- chylothorax, 294, 296–305
- disorders of long fatty acid oxidation, 595–606
- enteropathy, 112–113, 117, 129
- intestinal lymphangiectasia, 126
- ketogenic diet, 355, 362, 364–370
- lipid disorders, 626, 629–632
- liver diseases, 167–168, 171–181, 185
- MCADD, 592, 593
- pancreatitis, 191, 193, 194
- parenteral nutrition, 54–56
- preterm infants, 86, 90
- short bowel syndrome, 156, 157
- pathway of absorption, 294
- Methionine, see Homocystinuria
- Methylmalonic acidemia, 469–476
- classification, biochemistry, genetics, 469–470
- dietary management, see Organic acidemias
- outcomes and complications, 470

Malnutrition, classification, 7
- in hospitalised children, 23
- physical signs, 8
Mid upper arm circumference, measurement, 6
Migraine, food allergy, 311, 332
Milk free diet, 114–115, 322–328

low phytanic acid diet, 648
Peroxisomal disorders, 637–653
Phenylalanine, see Phenylketonuria
supplementation in tyrosinaemia
types I, II, III, 421
Phenybutyrate, in urea cycle
disorders, 389
Phenylketonuria (PKU), 392–465
classification, biochemistry,
genetics, diagnosis, 392–394
dietary management, see Low
amino acid diets
other treatment options, 397–399
treatment guidelines and
outcomes, 394–397
Phosphate
binders, 256–258
phosphate rich foods, 250, 256
Phospholipids, 624–625
Phyty acid, 648–653
Polyunsaturated fatty acids (PUFA)
chronic kidney disease, 253
familial hypercholesterolaemia,
633–634
following renal transplantation,
270
glycogen storage disease type I,
545
ketogenic diet, 359
nephrotic syndrome, 272
Pompe’s disease, see Glycogen
storage disease type II
Portion sizes, children’s diet, 25
Potassium
acute kidney injury, 244, 248, 249
chronic kidney disease, 253, 255,
256, 265–266
potassium rich foods, 249
Prader-Willi syndrome, 804–807
assessment and requirements,
805–806
dietary treatment, 806–807
Prebiotics, 100, 325, 683, 702
Prescribable products, 21
Preterm infants, 83–103
breast milk, 91–94
breast milk fortifiers, 92–94, 100
chronic lung disease, 100
enteral feeding, 91–97
feed intolerance, 100
growth, 98–99
hydrolysed protein formulas, 94
necrotising enterocolitis, 88, 99, 100
nutritional assessment, 97
nutritional requirements, 83–87
parenteral nutrition, 87–91
post discharge nutrition, 100–102
preterm formulas, 94–96
weaning, 102–103
Prebiotics, 80, 142, 235, 687, 702, 810
Propionic acidaemia, 469–476
classification, biochemistry,
genetics, 469–470
dietary management, see Organic
acidemias
outcomes and complications, 470
Protein
biological value, 457–458
exchanges, 458–461
protein:energy ratio, 17–18
reference nutrient intake, 12, 18
safe level of intake, 457
supplements, 20
Pseudo-obstruction disorder, chronic
idiopathic, 141–142
Purine, dietary sources, 280
Pyridoxine, in homocystinuria, 406
Pyruvate dehydrogenase (PDH)
deficiency, 354, 614–615
Refeeding syndrome
critical care, 78
Crohn’s disease, 133
eating disorders, 674–675
Reference Nutrient Intake (RNI), 12
Refsum’s disease, adult, 648–653
esential fatty acids, 651
infantile Refsum’s disease, 647
low phytanic acid diet, 651–653
phytanic acid, 649–651
Regurgitation, 135–136
Renal failure, see Acute kidney
injury, Chronic kidney disease
Renal solute load, 275–276
Renal stones, 276–278
Renal tubular disorders, 279–281
Bartter’s syndrome, 279–281
cystinosis, 280
Resection, gut, 100, 152, 154–155,
158
Respiratory disease, cystic fibrosis,
223
Rett syndrome, 677, 777, 779
Richner-Hanhart syndrome, see
Tyrosinaemia type II
Rickets, 739
Afro-Caribbean children, 760
cancer, 666
cystinosis, 280
Fanconi-Bickel syndrome, 567
hereditary fructose intolerance, 575
liver diseases, 169
low calcium diet, 279
parenteral nutrition, 54
South Asian children, 759
tyrosinaemian type I, 410–411
Riboflavin, in multiple acyl-CoA
dehydrogenase deficiency, 608
Sapropterin, in phenylketonuria, 399
School meals, 735–737
Severe Combined Immunodeficiency
(SCID), 338–341
