6 Microstrip Design at Low Frequencies 120

6.1 The Microstrip Design Problem 120
6.1.1 A Transistor Amplifier Input Network 120
6.1.2 The Geometry of Microstrip 121

6.2 The Quasi-TEM Mode of Propagation 122

6.3 Static-TEM Parameters 124
6.3.1 The Characteristic Impedance \( Z_0 \) 124
6.3.2 The Effective Microstrip Permittivity \( \varepsilon_{\text{eff}} \) 125
6.3.3 Synthesis: The Width-to-height Ratio \( w/h \) 126
6.3.4 Wavelength \( \lambda \), and Physical Length \( \ell \) 127

6.4 Effective Permittivity and Characteristic Impedance of Microstrip 127
6.4.1 Formulas for Effective Permittivity and Characteristic Impedance 128
6.4.2 A Convenient Approximation of Effective Permittivity 130

6.5 Filling Factor 132

6.6 Approximate Graphically Based Synthesis 134

6.7 Formulas for Accurate Static-TEM Design Calculations 137
6.7.1 Synthesis Formulas (\( Z_0 \) and \( \varepsilon_r \) Given) 137
6.7.2 Analysis Formulas (\( w/h \) and \( \varepsilon_r \) Given) 138
6.7.3 Overall Accuracies to be Expected From the Previous Expressions 139

6.8 Electromagnetic Analysis-based Techniques 139

6.9 A Worked Example of Static-TEM Synthesis 140
6.9.1 Graphical Determination 140
6.9.2 Accurately Calculated Results 141
6.9.3 Final Dimensions of the Microstrip Element 141

6.10 Microstrip on a Dielectrically Anisotropic Substrate 141

6.11 Microstrip and Magnetic Materials 146

6.12 Effects of Finite Strip Thickness, Metallic Enclosure, and Manufacturing Tolerances 147
6.12.1 Effects of Finite Strip Thickness 147
6.12.2 Alternative Treatment of the Effect of Strip Thickness 148
6.12.3 Effects of a Metallic Enclosure 149
6.12.4 Effects Due to Manufacturing Tolerances 150

6.13 Pulse Propagation along Microstrip Lines 151

6.14 Recommendations Relating to the Static-TEM Approaches 152
6.14.1 The Principal Static-TEM Synthesis Formulas 152
6.14.2 Microstrip on a Sapphire (Anisotropic) Substrate 153
6.14.3 Design Strategies Accommodating Manufacturing Tolerances 154
7  Microstrip at High Frequencies  157

7.1  Introduction  157

7.2  Frequency-dependent Effects  157

7.2.1  Frequency-dependent Charge Distribution  158

7.2.2  Dielectric Dispersion and Current Bunching  158

7.2.3  Skin Effect  163

7.2.4  Surface and Edge Effects  167

7.3  Approximate Calculations Accounting for Dispersion  169

7.4  Accurate Design Formulas  173

7.4.1  Edwards and Owens’ Expressions  173

7.4.2  Expressions Suitable for Millimeter-wave Design  175

7.4.3  Dispersion Curves Derived from Simulations  179

7.4.4  Designs Requiring Dispersion Calculations, Worked Example  180

7.5  Effects due to Ferrite and to Dielectrically Anisotropic Substrates  182

7.5.1  Effects of Ferrite Substrates  182

7.5.2  Effects of a Dielectrically Anisotropic Substrate  182

7.6  Field Solutions  183

7.6.1  One Example of a ‘Classic’ Frequency-dependent Computer-based Field Solution  183

7.6.2  Asymmetry Effects  184

7.6.3  Time-domain Approaches  184

7.7  Frequency Dependence of Microstrip Characteristic Impedance  186

7.7.1  Different Definitions and Trends with Increasing Frequency  186

7.7.2  Use of the Planar Waveguide Model (Figure 7.24)  187

7.7.3  A First-order Expression for $Z_0(f)$  188

7.7.4  A Second-order Expression for $Z_0(f)$  188

7.7.5  A Further Alternative Expression  189

7.7.6  A Design Algorithm for Microstrip Width  189

7.8  Multimoding and Limitations on Operating Frequency  190

7.8.1  The Lowest-order Transverse Microstrip Resonance  190

7.8.2  The TM Mode Limitation  191

7.9  Design Recommendations  194

7.10  Summary  196

References  196

8  Loss and Power-dependent Effects in Microstrip  200

8.1  Introduction  200

8.2  $Q$ Factor as a Measure of Loss  200

8.2.1  Definition  200

8.2.2  Loaded $Q$ Factor  202

8.2.3  External $Q$ Factor of an Open-circuited Microstrip Resonator  202

8.3  Power Losses and Parasitic Effects  208

8.3.1  Conductor Loss  209
8.3.2 Dielectric Loss
8.3.3 Radiation
8.3.4 Q Factor and Attenuation Coefficient
8.3.5 Surface-wave Propagation
8.3.6 Parasitic Coupling
8.3.7 Radiation and Surface-wave Losses from Various Discontinuities
8.3.8 Losses in Microstrip on Semi-insulating GaAs
8.4 Superconducting Microstrip Lines
8.5 Power-handling Capabilities
  8.5.1 Maximum Average Power $P_{ma}$ Under CW Conditions
  8.5.2 Peak (Pulse) Power-handling Capability
8.6 Passive Intermodulation Distortion
  8.6.1 Origins of PIM
  8.6.2 PIM on Microstrip Transmission Lines
  8.6.3 Design Guidelines
8.7 Summary

9 Discontinuities in Microstrip
9.1 Introduction
9.2 The Main Discontinuities
  9.2.1 The Open Circuit
  9.2.2 The Series Gap
  9.2.3 Microstrip Short Circuits
  9.2.4 Further Discontinuities
9.3 Bends in Microstrip
  9.3.1 The Right-angled Bend or “Corner”
  9.3.2 Mitered or “Matched” Microstrip Bends, Compensation Techniques
9.4 Step Changes in Width (Impedance Step)
  9.4.1 The Symmetrical Microstrip Step
  9.4.2 The Asymmetrical Step in Microstrip
9.5 The Narrow Transverse Slit
9.6 Microstrip Junctions
  9.6.1 The Microstrip T Junction
  9.6.2 Compensated T Junctions
  9.6.3 Cross Junctions
  9.6.4 Open Circuits and Series Gaps
  9.6.5 Other Discontinuities
  9.6.6 Cross and T Junctions
  9.6.7 Radial Bends
  9.6.8 Frequency Dependence of via Parameters
9.7 Recommendations for the Calculation of Discontinuities
  9.7.1 Foreshortened Open Circuits
  9.7.2 Series Gaps
  9.7.3 Short Circuits
  9.7.4 Right-angled and Mitered Bends
### 10 Parallel-coupled Microstrip Lines

10.1 Introduction 268

10.2 Coupled Transmission Line Theory
   - 10.2.1 Parallel-coupled Transmission Lines 269
   - 10.2.2 Even and Odd Modes 269
   - 10.2.3 Transmission Line Equations 271
   - 10.2.4 Capacitance Matrix Extraction 277

10.3 Formulas for Characteristic Impedance of Coupled Lines 278
   - 10.3.1 Derivation of Bryant and Weiss 279
   - 10.3.2 Derivation of Hammerstad and Jansen 280
   - 10.3.3 Characteristic Impedances in Terms of the Coupling Factor 284
   - 10.3.4 Connecting Microstrip Lines 287

10.4 Semi-empirical Analysis Formulas as a Design Aid
   - 10.4.1 Dispersion 294
   - 10.4.2 More Accurate Design Expressions, Including Dispersion 295

10.5 An Approximate Synthesis Technique 301

10.6 Summary 304

References 304

### 11 Applications of Parallel-coupled Microstrip Lines

11.1 Introduction 306

11.2 Directional Couplers
   - 11.2.1 Overall Parameters for Couplers 308

11.3 Design Example: Design of a 10 dB Microstrip Coupler 308
   - 11.3.1 Use of Bryant and Weiss’ Curves 309
   - 11.3.2 Synthesis Using Akhtarzad's Technique 309
   - 11.3.3 Comparison of Methods 310

11.4 Frequency- and Length-Dependent Characteristics of Directional Couplers 310
   - 11.4.1 Optimum Coupled-region Length 310
   - 11.4.2 Overall Effects and Getsinger’s Model 313
   - 11.4.3 Complete Coupling Section Response 314
   - 11.4.4 Coupler Directivity 314

11.5 Special Coupler Designs with Improved Performance
   - 11.5.1 The Lange Coupler 315
   - 11.5.2 The Unfolded Lange Coupler 319
   - 11.5.3 Shielded Parallel-coupled Microstrips 320
   - 11.5.4 The Use of a Dielectric Overlay 321
   - 11.5.5 The Incorporation of Lumped Capacitors 321
   - 11.5.6 The Effect of a Dielectrically Anisotropic Substrate 324
   - 11.5.7 Microstrip Multiplexers 324
11.5.8 Multisection Couplers
11.5.9 Re-entrant Mode Couplers
11.5.10 Patch Couplers
11.5.11 Planar Combline Directional Couplers

11.6 Thickness Effects, Power Losses, and Fabrication Tolerances
11.6.1 Thickness Effects
11.6.2 Power Losses
11.6.3 Effects of Fabrication Tolerances

11.7 Choice of Structure and Design Recommendations
11.7.1 Design Procedure for Coupled Microstrips, where the Mid-band Coupling Factor $C < -6$ dB
11.7.2 Relatively Large Coupling Factors (typically $C$ is between $-6$ and $-3$ dB)
11.7.3 Length of the Coupled Region
11.7.4 Frequency Response
11.7.5 Coupled Structures with Improved Performance
11.7.6 Effects of Conductor Thickness, Power Losses, and Production Tolerances
11.7.7 Crosstalk Between Microstrip Lines used in Digital Systems
11.7.8 Post-manufacture Circuit Adjustment

11.8 Summary
