Preface  XXIII

1  The Design of Safer Chemicals: Past, Present, and Future Perspectives  1
   Stephen C. DeVito
   1.1 Evolution of the Concept  1
   1.1.1 In the Development of Drug Substances: Emergence of the Medicinal Chemist  2
   1.1.2 In the Development of Pesticide Substances  4
   1.1.3 In the Development of Industrial Chemical Substances  5
   1.1.3.1 Stagnation of the Concept Because of Section 5 of the TSCA  7
   1.2 Characteristics of a “Safer Chemical”  9
   1.2.1 Types of Safer Chemicals  11
   1.2.2 The Ideal Chemical  14
   1.3 The Future of the Concept  16
   1.4 Disclaimer  18
   References  18

2  Differential Toxicity Characterization of Green Alternative Chemicals  21
   Richard Judson
   2.1 Introduction  21
   2.2 Chemical Properties Related to Differential Toxicity  23
   2.3 Modeling Chemical Clearance – Metabolism and Excretion  25
   2.4 Predicting Differential Inherent Molecular Toxicity  28
   2.4.1 Cell Types/Cell Lines  28
   2.4.2 High-Throughput Screening (HTS)  29
   2.4.3 High-Content Screening (HCS)  30
   2.4.4 Whole-Genome Approaches  30
   2.5 Integrating In Vitro Data to Model Toxicity Potential  31
   2.6 Databases Relevant for Toxicity Characterization  33
   2.7 Example of Differential Toxicity Analysis  34
   2.8 Conclusion  39
3 Understanding Mechanisms of Metabolic Transformations as a Tool for Designing Safer Chemicals  47

Thomas G. Osimitz and John L. Nelson

3.1 Introduction  47
3.2 The Role of Metabolism in Producing Toxic Metabolites  47
3.2.1 Phase I Metabolism  48
3.2.2 Phase II Metabolism  48
3.3 Mechanisms by Which Chemicals Produce Toxicity  59
3.3.1 Covalent Binding to Macromolecules  59
3.3.2 Enzyme Inhibition  61
3.3.3 Ischemia/Hypoxia  63
3.3.4 Oxidative Stress  65
3.3.5 Receptor–Ligand Interactions  69
3.4 Conclusion  69

References  72

4 Structural and Toxic Mechanism-Based Approaches to Designing Safer Chemicals  77

Stephen C. DeVito

4.1 Toxicophores  77
4.1.1 Electrophilic Toxicophores  77
4.2 Designing Safer Electrophilic Substances  82
4.3 Structure–Activity Relationships  86
4.3.1 Aliphatic Carboxylic Acids  87
4.3.2 Organonitriles  90
4.4 Quantitative Structure–Activity Relationships (QSARs)  92
4.5 Isosteric Substitution as a Strategy for the Design of Safer Chemicals  95
4.5.1 Isosteric Substitution in the Design of Safer Drug Substances  97
4.5.2 Isosteric Substitution in the Design of Safer Pesticides  97
4.5.3 Isosteric Substitution in the Design of Safer Commercial Chemicals  98
4.6 Conclusion  100
4.7 Disclaimer  102

References  102

5 Informing Substitution to Safer Alternatives  107

Emma Lavoie, David DiFiore, Meghan Marshall, Chuantung Lin, Kelly Grant, Katherine Hart, Fred Arnold, Laura Morlacci, Kathleen Vokes, Carol Hetfield, Elizabeth Sommer, Melanie Vrabel, Mary Cushmac, Charles Auer, and Clive Davies

5.1 Design for Environment Approaches to Risk Reduction: Identifying and Encouraging the Use of Safer Chemistry  107
5.2 Assessment of Safer Chemical Alternatives: Enabling Scientific, Technological, and Commercial Development  108
5.3 Informed Substitution  111
5.3.1 Functional Use as an Analytical Construct  112
5.3.2 Defining Safer Chemistry – the DfE Criteria for Safer Chemical Ingredients  114
5.3.3 Continuous Improvement to Advance Green Chemistry  114
5.3.4 Best Practices to Manage Risks in the Absence of Safer Substitutes  115
5.3.5 Life-Cycle Thinking: A Holistic Approach  116
5.4 Examples that Illustrate Informed Substitution  116
5.4.1 Informing Real-Time Substitution Decisions: Chemical Alternative Assessment for Pentabromodiphenyl Ether  116
5.4.1.1 The Partnership  117
5.4.1.2 The Alternatives Assessment  118
5.4.2 Encouraging Informed Substitution: Safer Product Labeling Program  120
5.4.2.1 Substituting to Safer Surfactants  121
5.4.2.2 The Safer Detergents Stewardship Initiative  125
5.4.2.3 CleanGredients®  125
5.4.3 Developing and Applying Best Practices in the Absence of Safer Substitutes: Isocyanates  126
5.4.3.1 Best Practices as an Important Risk Management Approach  126
5.4.3.2 New Developments in Manufacturing Polyurethanes Without Using Isocyanates  127
5.4.3.3 Safer Manufacture of Diisocyanates Without Using Phosgene  127
5.4.4 Life-Cycle Assessment to Inform Alternatives to Leaded Solder for Electronics  129
5.5 Conclusion  132
5.6 Disclaimer  133

References  133

6  Design of Safer Chemicals – Ionic Liquids  137
Ian Beadham, Monika Gurbisz and Nicholas Gathergood

6.1 Introduction  137
6.2 Environmental Considerations  137
6.3 Ionic Liquids – a Historical Perspective  138
6.3.1 First-Generation ILs  139
6.4 From Ionic Liquid Stability to Biodegradability  141
6.4.1 Overcoming the Inertness of 1-Substituted-3-Methylimidazolium Cation  147
6.5 Conclusion  152
References  155

7  Designing Safer Organocatalysts – What Lessons Can Be Learned When the Rebirth of an Old Research Area Coincides with the Advent of Green Chemistry?  159
Ian Beadham, Monika Gurbisz and Nicholas Gathergood

10 Greener Chelating Agents 281
Nicholas J. Dixon
10.1 Introduction 281
10.2 Chelants 282
10.3 Common Chelants 284
10.3.1 Aminocarboxylates 284
10.3.2 Phosphonates 284
10.3.3 Carboxylates 285
10.4 Issues with Current Chelants 285
10.4.1 EDTA and DTPA 285
10.4.2 NTA 288
10.4.3 Phosphonates 288
10.4.4 Ecolabels 289
10.5 Green Design Part 1 – Search for Biodegradable Chelants 290
10.5.1 10th Principle of Green Chemistry: Design Chemicals and Products to Degrade After Use 290
10.5.2 Aminocarboxylate NTA Variants 291
10.5.3 Polysuccinates 291
10.5.3.1 Ethylenediaminedisuccinic Acid [(S,S)-EDDS] 291
10.5.3.2 Iminodisuccinic Acid (IDS) 293
10.6 Comparing Chelating Agents 293
10.6.1 Stability Constants 293
10.6.2 Selectivity 294
10.6.3 pH 295
10.6.4 Speciation Modeling 295
10.6.5 Comparison of Strengths and Weaknesses 296
10.6.6 Application Chemistry 298
10.7 Six Steps to Greener Design 299
10.7.1 2nd Principle of Green Chemistry: Design Safer Chemicals and Products 299
10.7.2 Step 1. What is the Role of the Incumbent Chemical in the Application? 299
10.7.3 Step 2. What Environmental and Regulatory Constraints Exist? 300
10.7.4 Step 3. What are the Performance and Cost Requirements? 300
10.7.5 Step 4. How Do the Properties of Alternatives Compare with the Incumbent? 301
10.7.6 Step 5. Can Combinations of “Greener” Chemicals Be Used? 301
10.7.7 Step 6. Choose Likely Solutions and Test in the Application 301
10.8 Case Study – Six Steps to Greener Chelants for Laundry 302
10.8.1 Step 1. Role of Incumbent Chelant 302
10.8.2 Step 2. Environmental and Regulatory Constraints 303
10.8.3 Step 3. Performance and Cost Requirements 303
10.8.4 Step 4. Comparison of Phosphonates with Biodegradable Chelants 303
10.8.5 Step 5. Combinations of Chelants 304
10.8.6 Step 6. Test in Application 304
10.9 Conclusion 305

11 Improvements to the Environmental Performance of Synthetic-Based Drilling Muds 309
Sajida Bakhtyar and Marthe Monique Gagnon

11.1 Introduction 309
11.2 Drilling Mud Composition 310
11.2.1 Water or Saline Brine 311
11.2.2 Weighting Agent 311
11.2.3 Viscosifiers 311
11.2.4 Emulsifiers and Wetting Agents 311
11.2.5 Base Fluids/Oils 312
11.3 Characteristics and Biodegradability of SBFs 312
11.4 Case Study: Improvements in the Environmental Performance of Synthetic-Based Drilling Muds 314
11.4.1 Importance of Study 314
11.4.2 Origins of Drilling Muds and Emulsifiers 315
11.4.3 Aquatic Toxicity 315
11.4.3.1 Study Organism and Conditions 315
11.4.3.2 Biomarkers and Physiological Indices 316
11.4.3.3 Results 316
11.4.4 Biodegradation 321
11.4.5 Conclusions of Study 323
11.5 Conclusion 323

13 Property-Based Approaches to Design Rules for Reduced Toxicity 349
Adelina Voutchkova, Jakub Kostal, and Paul Anastas
13.1 Possible Approaches to Systematic Design Guidelines for Reduced Toxicity 349
13.2 Analogy with Medicinal Chemistry 354
13.3 Do Chemicals with Similar Toxicity Profiles Have Similar Physical/Chemical Properties? 356
13.4 Proposed Design Guidelines for Reduced Human Toxicity 358
13.4.1 Considerations for Reducing Human Absorption 358
13.4.1.1 Example: Reducing Carcinogenicity by Decreasing Oral Bioavailability 358
13.5 Using Property Guidelines to Design for Reducing Acute Aquatic Toxicity 362
13.6 Predicting the Physicochemical Properties and Attributes Needed for Developing Design Rules 365
13.6.1 Solvent-Related Properties 365
13.6.1.1 Hydrophobicity 365
13.6.1.2 Solubility 367
13.6.1.3 pK_a 367
13.6.2 Electronic Properties 368
  13.6.2.1 Orbital Energies 368
  13.6.2.2 Molecular Dipole Moment and Polarizability 369
  13.6.2.3 Molecular Surface Area 370
13.7 Conclusion 371
References 371

14 Reducing Carcinogenicity and Mutagenicity Through Mechanism-Based Molecular Design of Chemicals 375
   David Y. Lai and Yin-tak Woo
14.1 Introduction 375
14.2 Mechanisms of Chemical Carcinogenesis and Structure–Activity Relationship (SAR) 376
14.3 General Molecular Parameters Affecting the Carcinogenic and Mutagenic Potential of Chemicals 378
  14.3.1 Physicochemical Properties 379
    14.3.1.1 Molecular Weight 379
    14.3.1.2 Molecular Size and Shape 379
    14.3.1.3 Solubility 379
    14.3.1.4 Volatility 380
  14.3.2 Nature and Position of Substituents 381
  14.3.3 Molecular Flexibility, Polyfunctionality, and Spacing/Distance Between Reactive Groups 381
  14.3.4 Resonance Stabilization of the Electrophilic Metabolites 381
14.4 Specific Structural Criteria of Different Classes of Chemical Carcinogens and Mutagens 382
  14.4.1 Aromatic Amines and Azo Dyes/Pigments 383
  14.4.2 Polycyclic Aromatic Hydrocarbons (PAHs) 385
  14.4.3 N-Nitrosamines 386
  14.4.4 Hydrazo, Aliphatic Azo and Azoxy Compounds, and Arydialkyltriazenes 388
  14.4.5 Organophosphorus Compounds 388
  14.4.6 Carbamates 389
  14.4.7 Epoxides and Aziridines 390
  14.4.8 Lactones and Sultones 391
  14.4.9 Alkyl Esters of Moderately Strong and Strong Acids 391
  14.4.10 Haloalkanes and Substituted Haloalkanes 392
  14.4.11 N-Mustards and S-Mustards 393
  14.4.12 N-Nitrosamides 394
  14.4.13 Aldehydes and Substituted Aldehydes 395
  14.4.14 Michael Addition Acceptors 395
  14.4.15 Arylating Agents 396
  14.4.16 Acylating Agents and Isocyanates 396
  14.4.17 Organic Peroxides 397
  14.4.18 Quinones and Quinoid Compounds 397
### 14.5 Molecular Design of Chemicals of Low Carcinogenic and Mutagenic Potential

#### 14.5.1 General Approaches

#### 14.5.2 Specific Approaches

- **14.5.2.1 Aromatic Amines and Azo Dyes/Pigments**
- **14.5.2.2 Polycyclic Aromatic Hydrocarbons (PAHs)**
- **14.5.2.3 N-Nitrosamines**
- **14.5.2.4 Hydrazo, Aliphatic Azo and Azoxy Compounds, and Aryldialkyltriazenes**
- **14.5.2.5 Organophosphorus Compounds**
- **14.5.2.6 Carbamates**
- **14.5.2.7 Epoxides and Aziridines (Ethilenimines)**
- **14.5.2.8 Lactones and Sultones**
- **14.5.2.9 Alkyl Esters of Moderately Strong and Strong Acids**
- **14.5.2.10 Haloalkanes and Substituted Haloalkanes**
- **14.5.2.11 N-Mustards and S-Mustards**
- **14.5.2.12 N-Nitrosamides**
- **14.5.2.13 Aldehydes and Substituted Aldehydes**
- **14.5.2.14 Michael Addition Acceptors**
- **14.5.2.15 Arylating Agents**
- **14.5.2.16 Acylating Agents and Isocyanates**
- **14.5.2.17 Organic Peroxides**
- **14.5.2.18 Quinones and Quinoid Compounds**

#### 14.6 Conclusion

#### 14.7 Disclaimer

---

### 15 Reducing Ecotoxicity

*Keith R Solomon and Mark Hanson*

#### 15.1 Introduction to Key Aspects of Ecotoxicology

#### 15.1.1 Protection Goals and Assessment Endpoints

#### 15.1.2 Structure and Function in Ecosystems

#### 15.1.3 Diversity of Sensitivity in Ecosystems

#### 15.2 Environmental Fate and Pathways of Exposure to Chemicals in the Environment

#### 15.2.1 Properties Affecting Bioavailability

#### 15.2.2 Properties Affecting Bioconcentration and Biomagnification

#### 15.2.3 Absorption, Distribution, Metabolism, and Excretion of Chemicals

#### 15.2.4 Modeling Exposure

#### 15.3 Mechanisms of Toxic Action

#### 15.3.1 Properties Affecting Toxicity

#### 15.3.2 Modeling Toxicity

#### 15.4 Examples of Methods That Can Be Used in Designing Chemicals with Reduced Ecological Risks
15.4.1 Fluorinated Surfactants 425
15.4.2 Pesticides 426
15.4.2.1 Designing Pesticides for Lack of Persistence 427
15.4.2.2 Designing Specific Isomers to Reduce Risk in the Environment 429
15.4.2.3 Developing Pesticides That Are More Specific to the Target Organism 431
15.4.2.4 Ranking and Prioritizing Pesticides in Terms of Risk to the Environment 432
15.4.3 Pharmaceuticals 433
15.4.4 Macro- and Micro-Contaminants Produced During Manufacture 435
15.5 Overview, Conclusions, and the Path Forward 437

Reducing Physical Hazards: Encouraging Inherently Safer Production
Nicholas A. Ashford

17.1 Introduction
17.2 Factors Affecting the Safety of a Production System [1]
17.2.1 The Scale of Production
17.2.2 The Quantity of Hazardous Chemicals Involved
17.2.3 The Hazardousness of the Chemicals Involved
17.2.4 Batch Versus Continuous Processing
17.2.5 The Presence of High Pressures or Temperatures
17.2.6 Storage of Intermediates versus Closed-Loop Processing
17.2.7 Multi-Stream Versus Single-Stream Plants
17.3 Chemical Safety and Accident Prevention: Inherent Safety and Inherently Safer Production
17.4 Incentives, Barriers, and Opportunities for the Adoption of Inherently Safer Technology
17.5 Elements of an Inherently Safer Production Approach [2, 3]
17.5.1 Timing and Anticipation of Decisions to Adopt (or Develop) Inherent Safety
17.5.2 Life-Cycle Aspects
17.6 A Methodology for Inherently Safer Production

Interaction of Chemicals with the Endocrine System
Thomas G. Osimitz

18.1 Interaction with the Endocrine System
18.1.1 Introduction
18.1.2 Importance of SAR and QSAR in Understanding the Chemical Nature of Endocrine Active Chemicals
18.2 Estrogens
18.2.1 General
18.2.2 Features of the Natural Ligand E₂ That Contribute to ER Binding
18.2.3 Features of Xenobiotics That Contribute to ER Binding
18.2.4 Criteria for Binding With the Estradiol Template
18.2.5 Prediction of Potential ER Binding
18.2.5.1 Initial Filters
18.2.5.2 Structural Alerts
18.2.6 Predictive Approach for Priority Setting
18.2.6.1 Phase I: Rejection Filters
18.2.7 Alkylphenols
18.2.8 Polybrominated Diphenyl Ethers (PBDEs)
