CONTENTS

Contributors vii
Preface xi

1. Existing Influenza Antivirals: Their Mechanisms of Action and Potential in the Face of Avian Influenza 1
   Erik De Clercq

2. Development of High-Throughput Screening Assays for Influenza 38
   Diana L. Noah, E. Lucile White, and James W. Noah

3. Mechanisms of IFN Resistance by Influenza Virus 73
   Heather J. Ezelle and Bret A. Hassel

4. Broadly Effective Anti-Respiratory Virus Agents 98
   Shiro Shigeta

5. Current Status on Development of Nucleic Acid-Based Antiviral Drugs Against Influenza Virus Infection 126
   Jonathan P. Wong, Mary E. Christopher, Murray Cairns, L.-Q. Sun, Roderic M. K. Dale, and Andres M. Salazar
6. Antiviral RNA Interference Strategies Targeting Influenza Virus and Other Respiratory Viruses 148
   Joost Haasnoot and Ben Berkhout

7. Promising Antiviral Glyco-molecules from an Edible Alga 166
   Toshimitsu Hayashi, Kyoko Hayashi, Kenji Kanekiy, Yuko Ohta, Jung-Bum Lee, Minoru Hashimoto, and Takahisa Nakano

8. Rational Design of an Anti-Adhesion Drug for Influenza 183
   Nicolai V. Bovin and Alexandra S. Gambaryan

9. Understanding Influenza Neuraminidase Inhibitors Using Quantitative Structure–Activity Relationship (QSAR) Models 209
   Rajeshwar P. Verma and Corwin Hansch

10. Peptide Inhibitors Targeting Virus-Cell Fusion in Class I Enveloped Viruses 226
    George F. Gao

11. Novel Influenza Therapeutics 247
    Laura M. Aschenbrener, Nicole Pelletier, Mang Yu, and Fang Fang

Index 265
