sensitivity-enhanced experiments 349
  HSQC 350
sensitivity-enhanced HSQC
  analysed using product operators 350
  practical aspects 353
  processing 352
  pulse sequence 351
shaped pulses 70
shims 484
signal-to-noise ratio
  effect of acquisition time on 91
  improved using weighting function 92
  improvement by time averaging 13
sinc wiggles 100
sine bell
  shifted 98
  weighting function 98
sine bell squared 98
sine modulation
  in two-dimensional NMR 189
  lack of frequency discrimination 227
  used in States–Haberkorn–Ruben method 230
slow motion 258
  sign of NOE enhancement 277
spectral density in 258
soft pulses 69
  inversion with 70
  shaped 70
Solomon equations 271
  analysis of NOESY 282
  analysis of steady-state NOE 278
  analysis of transient NOE 275
  in presence of cross correlation 308
spatially dependent phase
  defined 411
  dependence on experimental parameters 412
  due to shaped gradient 414
  in heteronuclear systems 414
spectral density 256
  area under 256
  at Larmor frequency, maximum in 257
  form for exponential correlation function 256
  reduced 257
  relation to correlation function 256
spectrum
  one spin 31
  three coupled spins 41
  two coupled spins 38
spin angular momentum
  eigenfunctions and eigenvalues of $\hat{I}_z$ 29
  matrix representations of operators 112
  operator for $z$-component, $\hat{I}_z$ 29
  operators for $x$- and $y$-components, $\hat{I}_x$ and $\hat{I}_y$ 111
  rotations of operators 143
spin diffusion  see slow motion
spin echo
  description using vector model 63
  for one spin, analysed using product operators 145
  gradient echo for selective excitation 432
  in heteronuclear systems, analysed using product operators 164
  in homonuclear systems, analysed using product operators 138
  in $I_nS$ spin systems 455
  interconversion of in-phase and anti-phase states 163
  offset refocused by 65
  phase evolution during 66
  refocusing of inhomogeneous broadening 301
  used to measure rate constant for transverse relaxation 304
spin lattice relaxation  see longitudinal relaxation
spin locking 298
spin state
  effect on multiplet 10
  label for reduced multiplet 332
  label for spectrum of two coupled spins 38
spin system
  notation 449
spin system analysis 468
  AA’XX’ 476
  AB 442, 468
  ABX 470
  computer program 477
spin–spin relaxation  see transverse relaxation
States–Haberkorn–Ruben method
frequency discrimination in two-dimensional NMR 230
States–TPPI 233
steady-state NOE
analysed using Solomon equations 278
heteronuclear 280
pulse sequence 278
strong coupling 12, 442
AA′XX′ 476
AB 442, 468
ABX 470
roofing 444
strong coupling parameter 443
placing in correct quadrant 469
subspecrum
in ABX spin system 471
superconducting magnet 483
superposition state 25
effect of free evolution 119
effect of pulse on 123
for one spin 106
generation of transverse magnetization by pulse 125
swept-frequency pulse 431

T

\( T_1 \) 262
\( T_1 \) noise 203
\( T_2 \) 294
\( T_2^* \) 303
tilt angle
of effective field 56
time averaging 13
time domain
complex representation 82
digitization of 77
signal with phase shift 86
transformation to frequency domain 77
truncation, effect of 100
two-dimensional 185
time proportional phase incrementation see TPPI
TOCSY
analysis using product operators 222
form of cross- and diagonal-peak multiplets 223
in extended spin systems 225
interpretation of spectrum 221
isotropic mixing in 221
of quinine 225
pulse sequence 222
\( z \)-filter in 430
zero-quantum interference in 224
TPPI 231
combined with States method 233
implemented in COSY 233
transient NOE experiment
effect of longer mixing times 278
enhancement in 277
pulse sequence 274
transition
in terms of energy levels 23
transmitter 486

transverse magnetization
free evolution calculated from wavefunction 122
related to ensemble average 116
zero at equilibrium 49, 116
transverse relaxation 247
behaviour of isolated spins 293
cross relaxation 297
dipolar, of two spins 296
effect of correlation time 295
effect of cross correlation 308
measurement of rate constant for 304
non-secular part 247, 286
rate constant for 293
relationship between non-secular part and longitudinal
relaxation 294
secular contribution 290
secular part 248, 286, 290
tree diagram 10
grouponometric identities 499
triple-quantum transition
in three-spin system 43
TROSY
exploitation of effect 358
in \(^{15}\text{N}–^{1}\text{H}\) fragment 310
line-selective transfer in 360
multiplet 359
origin of effect 310
TROSY HSQC
processing data from 364
pulse sequence 363
truncation 100
tuning and matching 485
two-dimensional lineshape
absolute value 233
double absorption 188
double dispersion 197
phase-twist 228
two-dimensional NMR
cosine amplitude modulation 187
COSY 190
double-quantum spectroscopy 203, 366

HMQC 212
HSQC 209
HSQC, constant time 357
INADEQUATE 206
NOESY 281
obtaining cosine and sine modulated data 227
phase modulation 228
processing 185
recording 185
ROESY 299
sensitivity-enhanced HSQC 350
sine amplitude modulation 189
power level and dB 487
TOCSY 221
TROSY HSQC 363
ZCOSY 345

U
unit operator 149

V
vector model 47
vector model description of
  off-resonance effects 67
  pulse calibration 61
  pulse–acquire 60
  pulses 52
  pulses of different phases 66
  refocusing pulse 63
  spin echo 63
virtual coupling 475

W
wavefunction 24
  eigenfunction 28
  normalization 108
  orthogonal 108
  role in quantum mechanics 26
  superposition state 25, 106
  time evolution 118
weak coupling 12, 442
weighting function
  decaying exponential, to enhance sensitivity 92
  Gaussian to control noise 95
  Gaussian used in conjunction with rising exponential 95
  Lorentz-to-Gauss transformation 97
matched filter 94
resolution enhancement with 94
shifted sine bell 98
sine bell 98
sine bell squared 98
specifying parameters 96

Z
z-filter
  in NOESY, TOCSY and ZCOSY 430
  introduced 428
  suppression of zero-quantum in 429
  zero-quantum in 428
z-magnetization
  differential equation for relaxation of 262
  driven to zero by random local fields 244
  equilibrium value 246, 260
  in terms of populations 260
  recovery to equilibrium, described 263
  relation to magnetic moments 243
  selection with field gradient pulse 420
ZCOSY
  advantages 347
  analysis using polarization operators 345
  form of cross-peak multiplet 346
  form of diagonal-peak multiplet 346
  pulse sequence 345
  z-filter in 430
zero filling 99
zero-frequency glitch 403
zero-quantum coherence
  dephasing 430
  diagrammatic representation of evolution 178
  evolution of 176
  generation from anti-phase terms 176
  interference in NOESY 427
  interference in TOCSY 224
  representation using product operators 175
  suppression of 426
zero-quantum dephasing 430
zero-quantum transition
  in three-spin system 42
  in two-spin system 39
