abalone aquaculture 641–42, 688–9
absorbance
colorimetry for total carbohydrates 49–50
measurement for chlorophyll estimation 41–2
see also optical density
absorption
coefficient (radiation intensity in reactors) 189, 209
of heavy metals, tolerance mechanisms 604, 604, 605
optical cross section calculation 92, 94
of photon energy, mathematical models 209–12
accelerated solvent extraction (ASE), lipids 55, 57
accessory pigments, function 25
acclimation see light acclimation
Accordion unit PBR design 237
acetyl-CoA carboxylase (ACCase) 524, 545–6, 558
acidification, ocean 694, 700
acidophilic microalgae, collection strategies 71–2
algae
bioprospecting for commercial potential 70
defining features 3
diversity in culture collections 81
education and training resources 89
range of nutritional types 123–4, 124
Algae Growth System (AGS) flexible film PBRs 239–41, 240
Algae Tunnel hybrid PBR system 243, 244
algaePARC (Wageningen) pilot facility 571, 572
algal blooms
frequency and dangers 482, 582, 582–3
in green water polyculture 617–18
from incubation of samples 38
management 674
natural, harvesting exploitation 227
vertical movement in water column 587
see also harmful algal blooms
alkaline cell lysis 282
Allen’s culture medium, composition 126, 128, 131
allergic reactions, inhibition by Spirulina 492
amino acids 468–71, 470, 508, 662–3, 676
ammonia, in wastewater 598
anemone, shellfish poisoning (ASP) 586
anoembol algae 5–6, 6, 16
anaerobic ponds (waste treatment) 597
animal feed
algae and conventional feeds compared 486–8
algae concentrates for aquaculture 634–5, 641, 665
algae diets for toxicity testing 484–5
colourant additives 480, 481, 684
enzyme and mineral additives 664–5
fishmeal benefits and demand 653–4, 654, 662
uses of Chlorella 334, 632–3
annual cycles see seasonal cycles
annular column photobioreactors 229–30, 230
antennae, light-harvesting
in cyanobacteria, response to light levels 96
energy transfer 26, 28
pigments 25, 26
small size and light acclimation 104, 567
truncation in C. reinhardtii mutants 421
anti-inflammatory activity 438, 484, 510–11
antibiotics
for culture purification 38
effects on Porphyridium growth 409, 410
resistance, selection markers 149, 657
transgenic antibacterial algae used as alternative 159, 665
anticancer activity
antitumour products 39, 437, 438, 484, 489
carcinogen sequestration, chlorophyllin 505
β-carotene, range of action 506
functional genomic investigation 515–16
microalgal cytotoxins 511, 511–12
antimicrobial peptides 659, 665
antisense RNA gene knockdown 154
antiviral agents 412, 437–8, 491–2, 508, 508
aquaculture
algae feed compared with fishmeal 54–5, 662, 666
clear water, microalgal requirements 618–22, 620
costs of algal mass cultivation systems 622, 623, 631
global production statistics 616, 616–17, 617

aquaculture (Continued)
green water culture techniques 616, 617–18, 635–6
integrated (sustainable) schemes 645
market value enhancement of produce 622–3
risk of algal bloom stimulation 589, 672
shellfish, toxin levels 588–9
species used in feed 626–9, 629, 673, 674
use of dry formulated feeds 621, 622, 623
use of microalgal biofuel residues 226, 257
Aquatic Species Program (US) 74
aqueous extraction processing (AEP) 290–1
areal productivity
and cell density 174
compared with alternative metrics 255, 313
and mixing 178
and optical path length 181, 181, 181–2
in reactor efficiency assessment 195–6, 196
Artemia (brine shrimp)
as by-product of Dunaliella culture 365
growing methods for aquaculture feed 644, 674
specific aquaculture uses 672
Arthrospira (Spirulina)
animal feed uses 486, 487–8
aquaculture uses 687–9
carotenoid spectrum 478, 479
ecology in African soda lakes 342–3
economic analysis of raceway pond production 321–4, 323–4
fatty acid composition 473, 474, 475
industrial mass culture production 346–54, 348, 353–4
morphology and ultrastructure 340–2, 341
physiology 343–6
product composition and quality 352, 352–3, 353
taxonomic status and research 339–40, 463
toxicology studies 484, 486
traditional food uses 461–2
vitamin B₁₂ bioavailability 475–6
Zarrouck’s culture medium 126, 128, 345, 349
ascorbic acid (vitamin C)
early commercial fermentation
production 137
enrichment in rotifers from algal feed 674
levels in algal species 680
asexual reproduction
autospore production cycle (Chlorella) 330

Index

BCA (bicinchoninic acid) protein assay 52
bead mills, for cell disruption 283
benthic microalgae
for abalone aquaculture 642
culture media 83
photobioreactor designs 246–7
BG-11 culture medium, composition 126, 128, 131, 375
Bigogno analysis method (lipids) 54
bio-rational collection–screening process 75–7, 76, 139
bioactivity
compounds from Nostoc species 437–8
lipid fatty acids 473, 475
research on novel red algal products 411–12
screening by bioassays 39, 513–14, 514
studies on animals and humans 484–6
biochemical composition see chemical composition analysis
biochemical oxygen demand (BOD) 597, 599, 645
biochemical products
diversity, from algal sources 11–12, 507–8, 512
extraction and purification methods 284–6, 288–93, 303
proteins and metabolic engineering 156–9, 157–8
screening of microalgae for 39, 72, 513–14, 514
shelf life 351
biocoils (helical photobioreactors) 234, 632
biodegradable plastics 524, 524–5
biodiesel
biorefinery plant, concept design 571–3, 573
collection of potential algal strains from seawater 71
compared with petroleum product 369, 599
desalinization 139–41, 142
market value and demand 566, 599–600
production processes 293–7, 294
biodiversity
extent and scope in algae 12
in microalgal culture collections 81
biofuels
advantages of using microalgae 418, 428, 462, 565–6
biochemical composition
metabolism 523–4
carbon feedstocks 140, 141
coproduction from production process 226, 504, 512

BAH (bioactive hydrogel) 87–9
bioactive agents in algal-based systems 293
biofilm formation 36
bioflavonoids (flavonoids) 147
biofuel
biodegradable plastics 524, 524–5
biodiesel
bioactive agents in algal-based systems 293
biofilm formation 36
bioflavonoids (flavonoids) 147
biofuel
microalgal, economic viability 226, 298, 303, 369, 566
octane/cetane rating 522–3, 523
research and development needed 566–74
research on potential of Chlorella 334–5

biogenic toxins 482–3
biolistic (particle bombardment)
transformation 149–50, 151, 394, 536
Biological Algae Growth System (BAGS) hybrid PBR 242
biological value (BV), proteins 467–8, 469
biomass
for biosorption of heavy metals 606–7
energy content 33
fractionation, in biorefinery 571–3
loss at night 198–9
measurement of production 31, 39–43, 45–7, 313–16
nonliving algae as products 606, 635, 685
produced from fermentation 135, 136
production costs, biodiesel case study 297, 297–8, 298–9
xicological testing in animals 484–5
see also productivity
bioprospecting
multivariate approaches 73–7, 76
univariate strategies 70–3
biorefineries 571–3, 573
bioremediation
algal proteins, scope for metabolic engineering 156, 157
applications for Chlorella cultures 335
capacity of microalgae for 131, 605–7
plant-based, algal, and mechanical systems 595–6
see also wastewater treatment
biosensors, microalgal 603
biotechnology see genetic engineering
biphasic culture media 83
bivalves see molluscs
Blackman model, light response curve 92, 93, 98, 98
Bligh–Dyer analysis method (lipids) 54, 288, 291
blue-green algae see cyanobacteria
BODIPY (neutral lipids dye) 65
Bold’s Basal culture medium composition 126, 128, 131
use and modification for Haematococcus culture 396, 397
Botryococcus braunii
culture media 374–5, 375
effects of culture conditions 375–8, 377
hydrocarbon biosynthetic pathways 521
race A 372, 373
race B 372–4, 374
mass culture approaches 378–80, 380
natural occurrence and hydrocarbon production 369–70, 370
oil production, business evaluation 380–4, 381, 382, 383
phyllogeny and taxonomy 370–2, 371
Bradford assay methods (protein) 52–3
breeding, challenges in microalgae 159–60, 655
brevetoxins 507, 509, 509–10, 586
broth media 82–3
Brownian motion 207
buffer systems 125–6, 345
business analysis see techno-economic analysis
calcium alginate beads 48–9
Calvin–Benson cycle 29, 29–30, 378
canthaxanthin 684
capital costs (CAPEX)
biodiesel case study 298, 299, 301
in techno-economic analysis 317, 318, 319–20, 321
carbohydrates
accumulation under nitrogen depletion 116
algal storage product types 10, 11–12, 551–2
amount related to cell density 177
digestibility 471, 487, 662
production in high light conditions 115
quantitative measurement 49–51
see also polysaccharides
carbon dioxide see CO2
carbon fixation
Chlorella as model organism for study 462
collection of suitable strains 73–4
measurement techniques 31
and pH rise 125–6
reaction pathways 29, 29–30, 522, 522
removal of ability (transgenic mitigation) 661
sequestration by marine algae 693, 698
Carbon Recycling Facility (CRF) film membrane PBR 247
CARET (β-carotene and retinol efficacy trial), lung cancer 491
β-carotene
as astaxanthin precursor 391
commercial producers and market value 365
Dunaliella as commercial source 359, 364, 478
health benefit assessment 364–5, 479, 491, 506
isomers in natural and synthetic products 361, 364, 480
toxicity testing 485
carotenogenesis
biosynthetic pathways 391–3, 392
carcinogenic effects of environmental conditions 118, 361, 361, 362
genetic regulation 393–4
ultrastructure changes in H. pluvialis 390, 390–1
carotenoids
accumulation and storage in Dunaliella 360, 361, 478
algal components and products 478–81, 479, 506
chemical structure and roles 24, 25, 478, 506
composition analysis, aquaculture algae 681, 681–85, 682
composition used for Nostoc classification 436
diversity in heterokont clades 15
high-production strains, collection and screening 71, 481
market value 507, 683
products from Chlorella spp. 334
carp, freshwater aquaculture 688
cascade culture systems 228, 228–9
cell concentration (density)
cell number counting methods 39–40
control in aquaculture hatcheries 638, 643
carbon dioxide, environmental 360
and control of biochemical composition 118–19
effect on light penetration depth 176, 177
effects on cell ultrastructure and composition 177
mutual shading and light–dark cycles 173, 207
optimum (OCD), for maximal yield 173–6, 175, 199, 208–9
quorum sensing (sudden culture decline) 658
related to average radiation intensity 189–90
cell recycled culture system 48
cell walls
in Arthospira (Spirulina) 341
doors, fine structure 7–8, 8
disruption methods, for chemical extraction 50, 58, 466
diversity in algae 11
heavy metal exclusion mechanisms 604, 604
polysaccharides
digestibility 662, 664
in Nostoc 437–8
in red microalgae 407–8, 408–9
secondary development in for H. pluvialis 390, 390–1, 394
thickness and ease of extraction 571

**Index**

718

Sigma starch assay method 50–1
silicon, nutritional requirement 128, 695
Simgae™ hybrid PBR design 242
skin care products, anti-inflammatory 412
sleeve reactors 229, 237, 411, 630
soda lakes, phytoplankton ecology 342–3
software for modelling analysis
- economic 312, 320, 324
- fluid dynamics behaviour 423
- soil
  - biphasic soil–water culture media 83
  - isolation of microalgae from 38, 73
  - solar drying, algal biomass 279, 279–80
  - solubility parameters 285–6
sonication see ultrasound

Soxhlet extraction method (lipids) 54–5, 57–8

sparging 103, 248, 568

species, definition and identification 81–2, 434–6

specific growth rate (μ) 42, 46, 128–30, 129, 172

spirulides 586, 586

Spirulina see Arthrospira

spray drying, algal biomass 278–9, 685

squalenes, biosynthetic pathways 372–4

starch
- conversion to triacylglycerol 551–2, 557
- quantitative measurement 50–1

static cultures 84

stationary growth phase 44, 45, 184

storage of cultures (long-term) 39, 86–7

strains
- characterization by products, Botryococcus 370, 371–2
- collection and isolation strategies 70–7, 76
- identification and authentication 87–8, 340
- improvement using biotechnology 569–71
- maintenance and storage 39, 84–6
- numbering designation in collections 82
- selection criteria, Arthrospira (Spirulina) 349

stress response, definition 90–1

subcritical water extraction 290

sugars
- in Arthrospira trophic regimes 346
- in B. braunii mixotrophic growth 378
- as carbon source for fermentation 135, 136, 142
- in microalgal cell wall polysaccharides 407, 662, 663

sulfated polysaccharides
- biosynthesis in cell wall formation 408–9
- characteristics and natural function 407–8

formation and environmental conditions 408

product properties and applications 408, 411–12, 437–8

from red microalgal mass cultivation 410–11, 411

sulfur deprivation, and hydrogen production 419, 422

suns drying, algal slurry 279

sunlight
- energy and surface intensity 190
- exposure and shading, effect of cell density 174–5, 175
- stabilization pond disinfection 598
- variation in solar angle 193–4
- supercritical fluid extraction 291–2, 293, 400

swimming crabs (Portunus spp.) 637

switchable polarity solvents 291

symbols and units, listed 303

tandem mass spectrometry (MS/MS) 60, 61

techno-economic analysis (TEA)
