Contents

Preface xi

1 Wireless Communications 1
  1.1 Wireless Communication Systems 1
  1.2 Orthogonal Frequency Division Multiplexing (OFDM) 3
    1.2.1 OFDM Concepts 4
    1.2.2 Mathematical Model of OFDM System 5
    1.2.3 OFDM Design Issues 9
    1.2.4 OFDMA 21
  1.3 MIMO 24
    1.3.1 Space-Time Codes 24
    1.3.2 Spatial Multiplexing Using Adaptive Multiple Antenna Techniques 27
    1.3.3 Open-loop MIMO Solutions 27
    1.3.4 Closed-loop MIMO Solutions 29
    1.3.5 MIMO Receiver Structure 31
  1.4 Multi-user Detection (MUD) 34
    1.4.1 Multi-user (CDMA) Receiver 34
    1.4.2 Suboptimum DS/CDMA Receivers 37
References 40

2 Software Defined Radio 41
  2.1 Software Defined Radio Architecture 41
  2.2 Digital Signal Processor and SDR Baseband Architecture 43
  2.3 Reconfigurable Wireless Communication Systems 46
    2.3.1 Unified Communication Algorithm 46
    2.3.2 Reconfigurable OFDM Implementation 47
    2.3.3 Reconfigurable OFDM and CDMA 47
  2.4 Digital Radio Processing 48
    2.4.1 Conventional RF 48
    2.4.2 Digital Radio Processing (DRP) Based System Architecture 52
References 58

3 Wireless Networks 59
  3.1 Multiple Access Communications and ALOHA 60
    3.1.1 ALOHA Systems and Slotted Multiple Access 61
    3.1.2 Slotted ALOHA 61

References
5.4 Mathematical Models Toward Networking Cognitive Radios

5.4.1 CR Link Model

5.4.2 Overlay CR Systems

5.4.3 Rate-Distance Nature

References

6 Cognitive Radio Networks

6.1 Network Coding for Cognitive Radio Relay Networks

6.1.1 System Model

6.1.2 Network Capacity Analysis on Fundamental CRRN Topologies

6.1.3 Link Allocation

6.1.4 Numerical Results

6.2 Cognitive Radio Networks Architecture

6.2.1 Network Architecture

6.2.2 Links in CRN

6.2.3 IP Mobility Management in CRN

6.3 Terminal Architecture of CRN

6.3.1 Cognitive Radio Device Architecture

6.3.2 Reconfigurable MAC

6.3.3 Radio Access Network Selection

6.4 QoS Provisional Diversity Radio Access Networks

6.4.1 Cooperative/Collaborative Diversity and Efficient Protocols

6.4.2 Statistical QoS Guarantees over Wireless Asymmetry

6.5 Scaling Laws of Ad-hoc and Cognitive Radio Networks

6.5.1 Network and Channel Models

6.5.2 Ad-hoc Networks

6.5.3 Cognitive Radio Networks

References

7 Spectrum Sensing

7.1 Spectrum Sensing to Detect Specific Primary System

7.1.1 Conventional Spectrum Sensing

7.1.2 Power Control

7.1.3 Power-Scaling Power Control

7.1.4 Cooperative Spectrum Sensing

7.2 Spectrum Sensing for Cognitive OFDMA Systems

7.2.1 Cognitive Cycle

7.2.2 Discrimination of States of the Primary System

7.2.3 Spectrum Sensing Procedure

7.3 Spectrum Sensing for Cognitive Multi-Radio Networks

7.3.1 Multiple System Sensing

7.3.2 Radio Resource Sensing

References

8 Medium Access Control

8.1 MAC for Cognitive Radios
10.4.3 Requirements and Challenges for Preserving User Privacy in CRNs

10.4.4 Implementation of CRN Security

References

11 Spectrum Management of Cognitive Radio Networks

11.1 Spectrum Sharing

11.2 Spectrum Pricing

11.3 Mobility Management of Heterogeneous Wireless Networks

11.4 Regulatory Issues and International Standards

11.4.1 Regulatory Issues

11.4.2 International Standards

References
