Index

Page references followed by “Fig.” and “Table” indicate figures and tables, respectively.

Active filter, 12
Air gap, 14, 76, 78, 383, 470, 581, 587, 600, 605, 692, 805. (see also Transformers)
Ampere-second balance on capacitor, 155, 444, 459, 477, 494, 509
Atomic (particle) accelerator, 10–11, 729
Audio-susceptibility (see Transfer function, closed-loop input-to-output voltage), 401, 418, 453
Average canonical graphical model, CCM operation, 211, 213(Fig.), 216, 217, 418, 450, 451, 452(Fig.)
Average model of the PWM (see PWM, average model), 291–2
Average model of the switches DC resistances, 288–91
Average PWM switch model, CCM operation, 253–58, 255(Fig.)
average equations of the PWM switch, 255–8, 448
averaged DC and AC small-signal model, 258–63, 259(Fig.)
boost (of), 254, 256–7, 258, 260(Fig.), 262
buck (of), 254, 256–7, 259, 261(Fig.)
buck-boost (of), 254, 256, 257, 260, 262(Fig.), 263
Čuk converter (of), 438–56, 448(Fig.), 452(Fig.)
SEPIC (of), 470–503, 481(Fig.)
PWM switch, 253–87
switching cell (three-terminal), 253, 254, 257, 258, 260
Average PWM switch model, DCM operation, 263–78
three-terminal PWM switch model, 264(Fig.), 263–7, 267(Fig.), 269, 270(Fig.)
average time-domain model (of), 263, 266, 267(Fig.), 268
DC model of boost converter, 270, 271(Fig.)
DC model of buck converter, 279–80, 279(Fig.)
DC model of buck-boost converter, 284–5, 284(Fig.)
small-signal model of, 267–9, 270(Fig.)
boost converter, 271–3, 273(Fig.)
buck converter, 280–83, 281(Fig.)
buck-boost converter, 285, 286(Fig.)
Average resonant switch model, 292–339. (see also Quasi-resonant converter),
zero-current (ZC) resonant switch (of), 293–300, 297(Fig.), 301(Fig.)
zero-voltage (ZV) resonant switch (of), 300–305, 302(Fig.), 305(Fig.)
Ballast, 11, 36, 73, 120, 136, 137, 140(Fig.)
Battery,
charging, 7, 16
lithium-ion/lithium, 6, 9, 429, 748
rechargeable, 13
Bi-directional
converter, DC–DC converter, 13, 17, 146, 147(Fig.)
power flow, 8, 13, 111, 782, 827
Bode plot, 341, 342, 353(Fig.)
of low-pass filter, 24, 26(Fig.)
Boost converter,
AC small-signal open-loop transfer functions, CCM operation (of), 178
AC small-signal open-loop transfer functions, DCM operation (of), 225–6, 241–6, 273–9
average state-space equations, CCM operation, 174–6
Boost converter (continued)

average state-space equations without neglecting the inductor dynamics (DCM), 237–8, 239–40
averaged DC and AC small-signal PWM switch model (CCM), 258–9, 260(Fig.)
boundary between CCM and DCM operation $k_{bound}$, 223, 224, 224(Fig.), 225, 361(Table), 367, 408, 411, 413, 416
canonical averaged model, CCM operation, 211, 215–16, 418
conduction power loss of a diode, 29, 407
critical value of $L$ for a CCM/DCM boundary operation, 413
DC voltage gain, CCM operation, 173, 177, 197
practical DC gain of boost converter, 358
DC voltage gain, DCM operation, 223–5, 241, 270–71
duty-cycle for load regulation, 179, 180, 273, 355, 358(Fig.), 402, 403, 407, 414(Fig.), 454
graphical averaged model, CCM operation, 191–211, 195(Fig.), 208(Fig.), 599(Fig.)
load characteristics, 413, 415(Fig.), 431
output voltage ripple, 178
power loss on the on-resistances of the transistor, inductor, and on diode, CCM operation, 407, 408
power loss on the on-resistance of the transistor, inductor, and on diode, DCM operation, 410
right-half plane zero, 180, 244, 418–19, 812
ripple in the inductor (input) current, 405
rms current through the output capacitor, 406, 688
small-signal model PWM switching cell–based, DCM operation, 271–3, 273(Fig.)
start-up, 417, 418
steady-state waveforms, CCM operation, 404(Fig.)
switch and diode currents, rms values, CCM operation, 403
tapped-inductor boost converter (see Tapped inductor, boost)
time-domain model PWM switching cell–based, DCM operation, 266, 267(Fig.)
three-level (see Three-level converter, boost)
true reduced-order average state-space equations, 220–22
waveforms at CCM/DCM boundary, 412(Fig.)
Bootstrap (bootstrapping) circuit, 45, 46, 690
Boundary between operation in CCM and DCM $k_{bound}$ (see Boost, Buck, Buck-boost, boundary)
Boundary control, 375, 375(Fig.)
Breakdown voltage (see Diode, breakdown voltage, and MOSFET, breakdown voltage)

Buck converter,

AC small-signal open-loop transfer functions, CCM operation (of), 184–7
AC small-signal open-loop transfer functions, DCM operation (of), 232–5, 249–53, 281–3
average state-space equations, CCM operation, 182–3, 203
average state-space equations without neglecting the inductor dynamics (DCM), 229–32, 239
averaged dc and ac small-signal PWM switch model (CCM), 259, 261(Fig.)
boundary between CCM and DCM operation $k_{bound}$, 223, 224, 224(Fig.), 225, 361(Table), 367, 408, 411, 413, 416
canonical averaged model, CCM operation, 211, 215–16, 418
critical value of $L$ for a CCM/DCM boundary operation, 413
DC voltage gain, CCM operation, 173, 177, 197
practical DC gain of boost converter, 358
DC voltage gain, DCM operation, 223–5, 241, 270–71
duty-cycle for load regulation, 179, 180, 273, 355, 358(Fig.), 402, 403, 407, 414(Fig.), 454
graphical averaged model, CCM operation, 191–211, 195(Fig.), 208(Fig.), 599(Fig.)
load characteristics, 413, 415(Fig.), 431
output voltage ripple, 178
power loss on the on-resistances of the transistor, inductor, and on diode, CCM operation, 407, 408
power loss on the on-resistance of the transistor, inductor, and on diode, DCM operation, 410
right-half plane zero, 180, 244, 418–19, 812
ripple in the inductor (input) current, 405
rms current through the output capacitor, 406, 688
small-signal model PWM switching cell–based, DCM operation, 271–3, 273(Fig.)
start-up, 417, 418
steady-state waveforms, CCM operation, 404(Fig.)
switch and diode currents, rms values, CCM operation, 403
tapped-inductor boost converter (see Tapped inductor, boost)
time-domain model PWM switching cell–based, DCM operation, 266, 267(Fig.)
three-level (see Three-level converter, boost)
true reduced-order average state-space equations, 220–22
waveforms at CCM/DCM boundary, 412(Fig.)
Bootstrap (bootstrapping) circuit, 45, 46, 690
Boundary between operation in CCM and DCM $k_{bound}$ (see Boost, Buck, Buck-boost, boundary)
Boundary control, 375, 375(Fig.)
Breakdown voltage (see Diode, breakdown voltage, and MOSFET, breakdown voltage)
true reduced-order average state-space equations, 229–32

Buck-boost converter,
ac small-signal open-loop transfer functions, CCM operation (of), 188–91
ac small-signal open-loop transfer functions, DCM operation (of), 228–9, 246–9, 285–7
average state-space equations, CCM operation, 187–8
average state-space equations without neglecting the inductor dynamics (DCM), 238
averaged dc and ac small-signal PWM switch model (CCM), 260, 262–3, 262(Fig.)
boundary between CCM and DCM operation $k_{bound}$, 228–9
canonical averaged model, CCM operation, 211–12, 216–17
capacitor ripple current, 427, 435
dc voltage gain, CCM operation, 188
dc voltage gain, DCM operation, 217, 228, 246, 284–5, 285(Fig.)
duty-cycle variation for load regulation, 432(Fig.)
four-switches non-inverting, 429(Fig.)
graphical averaged model, CCM operation, 208(Fig.)
load characteristics, 432
maximum value of $L$ that assures a DCM operation $L_{bound,max}$, 393
output voltage ripple, 427
power losses on $r_{DS(on)}$, diode $r_{D(on)}$ or $V_F$, and $r_L$, CCM operation, 424
power losses on $r_{DS(on)}$, diode $r_{D(on)}$ or $V_F$, and $r_L$, DCM operation, 433
power loss on the dc series resistance of the capacitor, 424
power supply for LED driver, 428(Fig.)
quadratic (see Quadratic converters)
right-half plane zero, 189, 248, 437
rms value of the capacitor current, 437
rms values of the currents through the main switch and diode, 424, 427
small-signal model PWM switching cell – based, DCM operation, 270(Fig.)
steady-state main waveforms, CCM operation, 423(Fig.)
steady-state main waveforms, DCM operation, 436(Fig.)
time-domain model PWM switching cell - based, DCM operation, 267(Fig.)
true reduced-order average state-space equations, 226, 228
two-switched buck-boost (see Two-switch buck-boost)

Burn-in process, 12

Capacitor, 68(Table), 69(Table)
blocking, 136, 634, 676, 794, 797. (see also Half-bridge, dc blocking capacitors. Three-level converter, full-bridge)
ceramic, 68, 69, 131, 384, 390, 401, 485, 488, 518, 520, 603, 606
electric field, 97
electrolytic, 65–8, 72, 73, 127, 356, 384, 390, 410, 565
equivalent series inductance ESL, 65, 67, 384, 416, 437, 550, 567
film capacitor, 67–70, 72, 356, 410, 601
polyester, 67, 71, 72, 410
polypropylene, 67, 70, 71
input electrolytic capacitor when operating across the USA range of line voltage, 565
lifetime(of), 67, 72, 80
multilayer, 68, 69, 74–6
rated voltage, 828
ripple current rating, 828
tantalum capacitor, 67, 68, 601, 606
temperature coefficient, 65, 67, 619

Cell,
fuel cell, 6, 7, 14, 81, 132, 357
photovoltaic cell, 4
solar cell (see photovoltaic cell)

Charge pump, 10, 519, 825. (see also Switched-capacitor, Voltage multiplier, Voltage step-up), 10, 519, 825

Cockcroft-Walton voltage tripler (see Voltage multiplier, tripler)

Conduction (power) loss, 8, 32, 78, 92, 94, 100, 109, 111, 119, 342, 344(Table), 531, 605, 648, 654, 706, 726, 728, 742, 793
power loss in the dc resistance of a transistor in conduction $r_{DS(on)}$(CCM), 47, 52, 56, 288, 344(Table), 357, 379, 381, 407, 424–5, 449, 564, 794, 796, 811
power loss on a diode in conduction (DCM operation), 291, 395
power loss on the diode in conduction (CCM operation), 291, 344(Table), 381, 395, 407, 424–5, 449, 564, 660
power loss on the parasitic resistance of the inductor, $r_L$, on the dc resistance of the switch in conduction, $r_{DS(on)}$, and on the equivalent resistance of a diode in conduction, $r_{D(on)}$(DCM operation), 291, 394, 414–15, 417, 433
Content of harmonics, 12, 690
harmonics spectrum, 134
Continuous conduction mode (CCM), 85, 140, 146, 150,
164, 169, 171, 173, 191, 211, 252–3, 288,
340, 369, 377, 382, 402, 421, 438, 471, 473,
479, 504, 505, 514, 534, 577, 598, 608, 636,
645, 660, 672, 783, 797
average state-space equations (see State-space
equations)
boundary between operation in CCM and DCM
$k_{bound}$ (see Boost, Buck, Buck-boost, boundary)
canonical graphical averaged model (see Averaged
canonical graphical model)
graphical averaged model (see State-space equations)
RMS values $I_{S,rms}$ and $I_{D,rms}$ in a steady-state
cycle, 288

Control
boundary (see Boundary control)
crossover frequency (see Control, unity-gain
bandwidth)
current-mode, 90, 131, 346, 399, 419–20, 456, 485,
489, 565, 606, 619, 648, 676, 688, 693, 695,
709, 824
dead-time, 107, 109, 607, 611, 636, 659
gain margin, 401
optocoupler, 574, 606
phase margin, 341, 342, 351, 352, 354, 401–2, 419,
568, 687–8
phase-shift control, 676, 677, 680, 695, 714
unity-gain bandwidth, 401, 402, 488
voltage-mode, 90, 346, 399, 400, 402, 419–20, 520,
551, 566, 688, 694, 711

Controller
analogue, 78
current-mode controller, 456, 485, 489, 564, 606
digital, 9
dynamic range of the PWM IC controller, 601
cycle skipping, 601
hybrid, 28
voltage-mode control (for), 400(Fig.)
voltage-mode controller, 402, 520, 566

Converter
current-fed, 23, 470, 631, 693. (see also
Current-driven converter)
voltage-fed, 23, 532, 607(Fig.), 631. (see also
Voltage-driven converter)

Converters comparison
buck-type push-pull, half-bridge and full-bridge, 696(Table)
center-tapped and bridge type rectifier of full-bridge
converter, 696(Table)

Characteristics of Ćuk and SEPIC converters in
DCM, 690(Table)
Ćuk converter in DCVM - buck-boost converter in
DCM, 461(Table)
step-up dc gain of tapped-inductor and classical boost
converters, 814(Fig.)
switching-capacitor/inductor cells in basic
converters, 760(Table)
transfer functions of QR ZCS buck, boost and
buck-boost, 364(Table)
transfer functions of QR ZVS buck, boost and
buck-boost, 363(Table)
transfer functions of PWM buck, boost and
buck-boost, (CCM), 359(Table)
transfer functions of PWM buck, boost and
buck-boost, (DCM), 361(Table)
voltage and current stresses in Ćuk, SEPIC and Zeta
converters, 691(Table)

Coupled-inductor, 9, 72, 76, 78, 369, 468, 469, 470, 488,
517, 520, 581, 583, 587, 588, 598–603, 605,
