About the Author xi
Series Foreword xiii
Preface xv
Acknowledgements xix
About the Companion Website xxix

1 Introduction 1
1.1 Historical background 1
1.2 Is document examination a science at all? 2
1.3 Quality assurance 6
1.4 Standards in forensic document examination 8
1.5 Competence of forensic practitioners 10
1.6 Cognitive bias 11
1.7 Training to be a forensic document examiner 12
References 13

2 Handwriting Development and Comparison 15
2.1 Introduction 15
2.2 The process of writing 15
2.3 Models of writing production 18
2.4 The learning of handwriting in young children 23
2.5 Handwriting in the adolescent: the origins of individuality 27
2.6 Mature handwriting of the adult 28
2.7 The deterioration of handwriting skill 29
2.8 The forensic analysis of handwriting 32
2.8.1 Specimen handwriting 33
2.8.2 Writing implements 35
2.8.3 Pre-examination review 37
2.8.4 The natural variation of handwriting 38
2.9 Interpretation of handwriting evidence 42
2.9.1 Limitations to the evidence in handwriting cases 42
2.9.2 Reaching conclusions 44
2.9.3 Computer use in interpretation 45

COPYRIGHTED MATERIAL
3 Signature Examination

3.1 Introduction

3.2 The development of signatures
   3.2.1 External influences: alcohol, infirmity and old age
   3.2.2 Guided hand signatures
   3.2.3 Signatures in blind people

3.3 Simulating signatures

3.4 Computer-based recognition of signatures

3.5 The forensic examination of signatures

3.6 Interpreting findings in signature cases

3.7 Note taking in signature cases

3.8 Reports in signature cases

3.9 Signature comparison: a worked example

4 Documents Produced Using Office Technology

4.1 Introduction

4.2 Typewriters

4.3 The forensic examination of typebar typewriters

4.4 Single element typewriters

4.5 Typewriter ribbons and correcting typescript
   4.5.1 Correcting typed documents

4.6 Computer printers
   4.6.1 Impact matrix printers
   4.6.2 Laser printers
   4.6.3 The forensic examination of laser printers and laser printed documents
   4.6.4 Inkjet printers
   4.6.5 The forensic examination of inkjet printers

4.7 Fax (facsimile) machines

4.8 Photocopiers
   4.8.1 The forensic examination of copy documents
   4.8.2 Composite documents
   4.8.3 Analysis of toner

4.9 Case notes in cases involving typed and copied documents

4.10 Reports in cases involving typed and copied documents

Typescript comparison: a worked example

5 The Examination of Printed Documents

5.1 Introduction

5.2 Some general principles of printing
   5.2.1 Ink properties
   5.2.2 Colour management
   5.2.3 Registration
   5.2.4 Half tone printing
   5.2.5 Traditional photographic and modern computer-based processes

5.3 Examination of the printing process

5.4 Examination of the finished document

5.5 Analysis of findings

5.6 Interpretation of findings

5.7 Note taking in printed document cases

5.8 Reports in printed document cases

Printed document comparison: a worked example

Report of Forensic Expert

References
8.1.3 Chemical analysis of inks 183
8.1.4 Where two inks intersect 183
8.2 The examination of paper
8.2.1 Torn or shredded paper 184
8.2.2 Marks in paper 185
8.2.3 Punched holes and perforations 186
8.3 The examination of written or machine-generated details
8.3.1 Erasures and obliterations 187
8.4 Copy documents 189
8.5 Altering security documents 190
8.6 Case notes in alterations cases 191
8.7 Reports in alterations cases 191
Alterations examination: a worked example 192
Report of Forensic Expert 196

10 Dating Documents 213
10.1 Dating handwriting 213
10.2 Dating ink 214
10.3 Dating paper (and other related materials) 218
10.4 Dating typescript and other mechanical processes 219
10.5 Dating pages from a pad or stack of paper
10.5.1 Impressions of handwriting 220
10.5.2 Ink transfer 221
10.5.3 Multipage documents 221
10.6 Sequencing
10.6.1 Ballpoint ink and ballpoint ink 222
10.6.2 Stamp pad inks and other media 222
10.6.3 Toner and other inks 222
10.7 Miscellaneous factors 223
10.8 Summary 223
10.9 Case notes and reports in cases involving document dating
Worked example 224
