critical micelle concentration, 70
enthalpies of micellization, 71
Evans equation, 70, 71
Frahm equation, 70, 71
isothermal titration calorimetry (ITC), 71
thermodynamic parameters, 71, 79–81
microemulsion(s) see also ionic liquid-in-oil microemulsions; nonaqueous microemulsions; phase-forming behaviors, IL-based microemulsions
additive influence
[bmim][BF$_4$]-in-cyclohexane microemulsion, 231, 231–2
[emim][EtSO$_4$]/TX-114/limonene, 232, 233
aqueous see aqueous microemulsions
biocatalysis
fungal oxidase-catalyzed oxidation, o-phenylenediamine, 337
laccase-catalyzed oxidation, 2,6-dimethoxyphenol, 337
lipase-catalyzed hydrolysis, 2,6-dimethoxyphenol, 337
lipase-catalyzed hydrolysis, 4-nitrophenyl butyrate, 337
capillary electrophoresis, 338
chemical reaction, 337
classifications, 262
colloidal domain
guanidinium ILs, 231
IL-assisted nonaqueous microemulsions, 228
IL-in-oil microemulsion, 228, 228
lidocaine docusate (LD), 229
silica nanoparticles, 229, 230
structure-directing ability, 229
components, 263
definition, 262, 325, 375
drug release, 338
features, 253
hemoglobin extraction, 338
IL-in-EG and EG-in-IL, 333
IL-in-IL, 333–4
IL-in-oil (IL/O) and oil-in-IL (O/IL)
additive effects, 331–2
micropolarity and intermolecular interaction, 330
microstructures, 329–30
phase behavior, 326–9
microemulsion(s) (cont'd)
solvation dynamics, 331
thermodynamics of formation, 330–331
IL-in-supercritical CO₂ and CO₂-in-IL, 334
IL-in-water and water-in-IL, 332–3
IL surfactants, long-chain anions, 272–6
ionic surfactants and ILs
polar solvents, 256–7
polar solvents and surfactants, 257, 258
solubilized in water, 254–6, 256
long-chain ILs
oil-in-water microemulsions, 269–71
water-in-oil microemulsions, 272
material synthesis
bimetallic palladium/gold nanoparticles, 335
gold nanoparticles, 335
mesoporous metal-organic framework, 335–6
polyaniline/silver (PANI/Ag) nanocomposite, 335
silica, 334–5
ZrO₂ nanoparticles, 335
nonmiscible liquids, 253
polymerization
atom transfer radical polymerization, 336
electropolymerization, 336
TiO₂ nanoparticles, 336
water-free IL-based, 304–5
morpholinium cation-based BILs, 414–16
morpholinium ILs
chemical formulae, 153
polarity
coumarin-153 (C-153), $E_1(30)$ values, 153–4, 157
definition, 153
fluorescence probes, 154
normalized steady-state absorption and fluorescence spectra, C-153, 155
static dielectric constant and refractive index, 153
temperature dependence, $n_{\text{max}}^\text{sm}$, 155, 156
structural heterogeneity
excitation wavelength-dependent emission spectra, 157–60
solvation dynamics, 160–163
time-resolved fluorescence anisotropy, 163–70
viscosity, 157, 158
MSS see micelle to solvent stacking (MSS)
NADESs see natural deep eutectic solvents (NADESs)
nanotechnology, 92–5
natural deep eutectic solvents (NADESs)
aplications, 529
cellular metabolism, 527
description, 518
microbial, mammalian and plant cells, 526–7
physicochemical properties, 527–8
preparation and structure, 527
water, effect of, 528–9
neutron reflectivity (NR)
