range names with, 15
Require Bounds on Variables option, 315, 323
unbounded objective function, 54, 307
using, 10–15
Solver Parameters window, 11, 12, 14, 15, 33, 34, 50, 55, 74, 313, 315, 322
Solver Results window, 13, 14, 34, 53, 54, 124, 295, 298, 319
Solver Sensitivity, 109–24, 126–9, 149, 172, 288, 289, 293
Solver specification, 11–12
allocation problem, 33
assignment problem, 74, 253
blending problem, 51
capacitated facility location problem, 242–3
capital budgeting problem, 200, 231
covering problem, 40–41, 44
curve-fitting problem, 282, 315
data envelopment analysis (DEA), 169
fixed cost problem, 236
funds flow problem, 89
general-network models, 86, 95
group assignment problem, 334
line balancing problem, 330
linearizing the absolute value, 298
linearizing the maximum, 296
machine-sequencing problem, 249, 319
order quantity problem, 273
playoff scheduling problem, 213
portfolio optimization problem, 292
product mix problem, 36–8
product portfolio problem, 138
quantity-discount problem, 276
set-covering problem, 204
set-packing problem, 207
set-partitioning problem, 210
special network models, 69, 74, 77
staff-scheduling problem, 44, 194
transportation problem, 69
transshipment problem, 77
traveling salesperson problem, 253–7, 321
two-dimensional location problem, 284, 325
two-variable problems, 282, 284
uncapacitated facility location
problem, 245
Spreadsheet models, 2, 4–7, 9, 27, 65, 285, 300
allocation model, 31–5
assignment model, 74
blending model, 48, 51
capacitated facility location model, 241–4
capital budgeting model, 199–201
covering model, 41, 42
curve fitting model, 282
data envelopment analysis (DEA) model, 170–172, 174, 176, 179
fixed-cost model, 236, 237
funds flow model, 89, 142
group assignment model, 333
linearizing the absolute value, 298
linearizing the maximum, 296
line-balancing model, 331
machine-sequencing model, 250, 319
order quantity model, 274
playoff scheduling model, 213, 214
portfolio optimization model, 291, 293
product mix model, 37, 38
product portfolio model, 138
quantity-discount model, 276
set-covering model, 204
set-packing model, 206
set-partitioning model, 209
staff-scheduling model, 44, 46
transportation model, 68, 69
transshipment model, 77
traveling salesperson model, 254, 256–8
two-dimensional location model, 285, 326
two-variable models, 282, 285, 287
uncapacitated facility location model, 244, 246
Spreadsheet-based optimization, 9
Spreadsheets, 1
advantages and disadvantages of, 9–10
conciseness, 5, 9
flexibility, 4, 9, 10
form and content, 4
input parameters, 5, 6
Staff-scheduling problem, 43–7, 193–5
Standard Evolutionary Engine, 343
Steepest ascent method, 272, 299
Strategic information, 28
Structural scheme, 133–4, 142–5, 150
Subtour elimination constraints, 258, 319
Subtours, 253
SUM formula, 25, 27, 69, 79
SUMIF function, 329, 330
SUMPRODUCT function, 24, 25, 27, 42, 55, 79, 80, 95
allocation model, 32
assignment model, 73
blending model, 50
covering model, 39, 42
data envelopment analysis (DEA), 168, 169, 177
fixed cost model, 236
funds flow model, 89
linear programming models, 24–7
network models with balance equations, 80
portfolio optimization model, 291
pricing model, 287
refinery model, 94
set-covering model, 203
set-packing model, 207
set-partitioning model, 209
transportation model, 68, 69
transshipment model, 76
traveling salesperson model, 252
SUMSQ function, 282
Tactical information, 28, 35
Tardiness, 247–9, 317–19
Threshold-level problem, 237–8
Tight constraints, 40
Tour, 251–8, 321
Tour constraints, 251, 259
Trace Precedents icon, 55
Transformed flows, 91–5
Transportation models, 66–71, 76, 79, 109–16, 123–7, 130
Transportation problem, 66–71
sensitivity analysis, 109–16, 123–7, 134–7
Transshipment models, 75–8
Transshipment problem, 75
Traveling salesperson problem, 251–9, 319–22
Tree diagram, 216
Two-dimensional location, 283–5, 324–7
Two-variable nonlinear models, 280–285, 296–9
curve fitting, 280–283, 293–6, 310
pricing example, 286–8
two-dimensional location, 283–5
Two-way tables, 122–3, 127
Unbounded objective function, 53–4, 300, 307, 365
Uncapacitated facility location problem, 243–6
Unique optimum, 131–2, 144
Upper bounds, 95, 127, 200, 215, 232, 279
Upper-bound constraints, 42, 138
Variables, 2, 11–12, 14, 16, 23–8, 39, 43, 79
artificial variables, 363, 364
auxiliary variables, 297, 299, 308
basic variables, 358–61, 363
binary variables, 191–3, 196, 199–201, 206, 212, 227–31, 308
entering variables, 359, 361
integer variables, 191–2, 195–6, 293, 300, 333, 335
leaving variables, 361
in linear functions, 23–4
nonbasic variables, 359, 387
nonnegative variables, 11–12, 33, 40, 54, 69, 249, 325
slack variables, 358, 362, 363 see also Decision variables
Virtual input, 179
Virtual output, 179–80
Weighted-average blending, 48–9, 51–2
What-if questions, 7, 74, 108, 133
Yield gains, 86–91
Yield losses, 84–6
