CHAPTER 1 INTRODUCTION 1

Mircea Eremia, Chen-Ching Liu, and Abdel-Aty Edris

PART I HVDC TRANSMISSION

Mircea Eremia

CHAPTER 2 POWER SEMICONDUCTOR DEVICES FOR HVDC AND FACTS SYSTEMS 11

Remus Teodorescu and Mircea Eremia

2.1 Power Semiconductor Overview 12

2.1.1 Not-Controllable Power Semiconductor Devices 13

2.1.2 Semicontrollable Power Semiconductor Devices 13

2.1.3 Fully Controllable Power Semiconductor Devices 17

2.1.3.1 Gate Turn-Off Thyristor 18

2.1.3.2 Integrated Gate-Commutated Thyristor 18

2.1.3.3 Isolated Gate Bipolar Transistor 18

2.1.4 Power Semiconductor Parameters 20

2.1.4.1 Steady-State Parameters 20

2.1.4.2 Switching Characteristics 20

2.1.5 Future Power Semiconductor Devices 21

2.2 Converter Types 21

2.3 HVDC Evolution 23

2.3.1 Line-Commutated HVDC Converters (LCC/CSC–HVDC) 24

2.3.2 Capacitor-Commutated Converter (CCC–HVDC) 26

2.3.3 Voltage Source Converter VSC–HVDC 28

2.3.3.1 VSC–HVDC Based on Two-Level Converters 29

2.3.3.2 VSC–HVDC Based on Multilevel Converters 29

2.3.3.3 Limitations of VSC Transmission 30

2.4 FACTS Evolution 30

References 33
CONTENTS

CHAPTER 3  CSC–HVDC TRANSMISSION  35
Mirea Eremia and Constantin Bulac

3.1 Structure and Configurations  35
  3.1.1 Structure of HVDC Links  35
  3.1.2 HVDC Configurations  40

3.2 Converter Bridge Modeling  47
  3.2.1 Rectifier Equations  47
    3.2.1.1 Ideal Converter Bridge Operation  47
    3.2.1.2 Commutation Process or Overlap  52
    3.2.1.3 Equivalent Circuit of the Rectifier  56
  3.2.2 Inverter Equations  57

3.3 Control of CSC–HVDC Transmission  59
  3.3.1 Equivalent Circuit and Control Characteristics  59
    3.3.1.1 Equivalent Circuit of DC Transmission Link  59
    3.3.1.2 Voltage–Current Characteristics  62
  3.3.2 HVDC Control Principles  64
    3.3.2.1 State Variables of a HVDC Link  64
    3.3.2.2 Basic Control Principles of the DC Voltage and DC Current  65
    3.3.2.3 Control Modes  67
  3.3.3 HVDC Control Strategies  69
    3.3.3.1 Rectifier Control Strategy  69
    3.3.3.2 Inverter Control Strategy  71
  3.3.4 Hierarchical Control of a HVDC Link  72
    3.3.4.1 Master Control  72
    3.3.4.2 Pole Control  74
    3.3.4.3 Firing (Valve) Control  78
    3.3.4.4 Telecommunications  78
    3.3.4.5 Measurement Transducers  78

3.4 Reactive Power and Harmonics  78
  3.4.1 Reactive Power Requirements and Sources  78
  3.4.2 Harmonics and Filters  83
    3.4.2.1 The Source of AC Harmonic Currents  83
    3.4.2.2 The Effect of Y/Δ Transformation on AC Harmonic Current  85
    3.4.2.3 Higher Pulse Operation Using Multiple Bridges and Transformers  86
    3.4.2.4 Elimination of Harmonics  86

3.5 Load Flow in Mixed HVAC/HVDC-CSC Systems  91
  3.5.1 Steady-State Model  91
    3.5.1.1 The Extended Variables Method  93
    3.5.1.2 The Sequential Method  94
    3.5.1.3 The Eliminated Variables Method  94

3.6 Interaction Between AC and DC Systems  96
  3.6.1 AC Systems Stabilization  96
  3.6.2 Influence of AC System Short-Circuit Ratio  96
  3.6.3 Effective Inertia Constant  99
  3.6.4 Reactive Power and the Strength of the AC System  100

3.7 Comparison Between DC and AC Transmission  101

3.8 Application on a CSC–HVDC Link  109
  3.8.1 Solution  111
Appendix 3.1  CSC–HVDC Systems in the World  118
References  123

CHAPTER 4  VSC–HVDC TRANSMISSION  125
Mircea Eremia, José Antonio Jardini, Guangfu Tang, and Lucian Toma

4.1 VSC Converter Structures  126
  4.1.1 Half-Bridge VSC or Two-Level Pole  126
  4.1.2 Full-Bridge Single-Phase VSC  128
  4.1.3 Three-Phase Two-Level VSC  128
  4.1.4 Three-Level Pole VSC  129
  4.1.5 Multimodule VSC Systems  131
  4.1.6 Multilevel VSC Systems  132
  4.1.7 Modular Multilevel Converter  138
    4.1.7.1 Half-Bridge Modular Multilevel Converter  140
    4.1.7.2 Full-Bridge Modular Multilevel Converter  143
    4.1.7.3 The MMC–HVDC INELFE Project  144
  4.1.8 Cascaded Two-Level Converters  147

4.2 Modulation Techniques  151
  4.2.1 PWM Techniques  151
    4.2.1.1 PWM Principle  151
    4.2.1.2 PWM Strategy Control of a Half-Bridge Converter  155
    4.2.1.3 Three-Phase Bridge Inverter with Sinusoidal PWM  159
  4.2.2 Modulation Techniques for Multilevel Converters  163
    4.2.2.1 PWM Algorithms for Multilevel Converters  163
    4.2.2.2 Space Vector Modulation Algorithms  165
    4.2.2.3 Other Modulation and Control Algorithms for Multilevel
            Converters  165

4.3 DC/AC Converter Analysis  166
  4.3.1 Operation Modes of the Switched-Inductor Cell  166
  4.3.2 Ideal DC/AC Half-Bridge Converter  168
  4.3.3 Averaging Models  173
    4.3.3.1 Circuit/Switch Averaging of DC–DC Converters  176
    4.3.3.2 State-Space Averaging of DC–DC Converters  177
    4.3.3.3 AVM of DC–AC Converters  178
  4.3.4 Detailed and Averaged Models for MMC–HVDC Systems  180
    4.3.4.1 Detailed Equivalent Models  181
    4.3.4.2 AVM of MMC–HVDC Using Voltage- and
            Current-Controlled Sources  183

4.4 VSC Transmission Scheme and Operation  188
  4.4.1 Power Equipment  188
  4.4.2 Principles of Active and Reactive Power Control  192
  4.4.3 VSC Transmission Control  196
    4.4.3.1 VSC Converter Control Using the Vector Control Strategy  196
    4.4.3.2 Levels of Control  199
    4.4.3.3 Coordination of Controls  200

4.5 Multiterminal VSC–HVDC Systems and HVDC Grids  203
  4.5.1 On the Conventional Multiterminal HVDC Configurations  203
  4.5.2 Multiterminal HVDC Grid Configurations  204
  4.5.3 Meshed HVDC Grid Configurations  209
CONTENTS

4.5.4 Need for Fast and Low Loss HVDC Breakers 211
  4.5.4.1 Preconditions 211
  4.5.4.2 Schemes for the Current Zero Formation 212
  4.5.4.3 Types of DC Circuit Breakers 214
4.5.5 HVDC Grid Protection 218
4.6 Load Flow and Stability Analysis 221
  4.6.1 Load Flow in Meshed AC/DC Grids 221
    4.6.1.1 Generalities 221
    4.6.1.2 Load Flow Calculation in a DC Grid 223
    4.6.1.3 Application 227
  4.6.2 Dynamic Stability in Meshed AC/DC Grids 231
    4.6.2.1 Generalities 231
    4.6.2.2 Description of the VSC Model for Stability Analysis 233
    4.6.2.3 Control Models 235
    4.6.2.4 P–V Droop Control 237
    4.6.2.5 Current and Voltage Limits 237
    4.6.2.6 RMS Model Testing 238
    4.6.2.7 Simulations on an AC/DC Meshed Grid 239
4.7 Comparison of CSC–HVDC Versus VSC–HVDC Transmission 246
  4.7.1 Differences Resulting from the Commutation Principle 246
  4.7.2 Differences Resulting from the Converter Type 248
4.8 Forward to Supergrid 249
  4.8.1 Challenges and Solutions for Developing Supergrid 249
    4.8.1.1 Connecting Renewable Energy Sources and Increased Transmission System Capacity 250
    4.8.1.2 Compensating Reactive Power 250
    4.8.1.3 Maintaining System Stability 252
  4.8.2 Hybrid AC and DC Systems 252
  4.8.3 Supernodes 254
  4.8.4 Stepwise Development of the European Supergrid 255
  4.8.5 Steps Toward a Planetary Supergrid 258
  4.8.6 VSC Multiterminal in China 260
Appendix 4.1 VSC–HVDC Projects Around the World 261
Appendix 4.2 Examples of VSC–HVDC One-Line Diagrams 263
References 263

PART II FACTS TECHNOLOGIES

Abdel-Aty Edris and Mircea Eremia

CHAPTER 5 STATIC Var COMPENSATOR (SVC) 271
Mircea Eremia, Aniruddha Gole, and Lucian Toma

5.1 Generalities 271
5.2 Thyristor-Controlled Reactor 273
5.3 Thyristor-Switched Capacitor 284
5.4 Configurations of SVC 287
  5.4.1 Fixed Capacitor and Thyristor-Controlled Reactor 287
  5.4.2 The SVC Device (TSC–TCR) 289
    5.4.2.1 V–I Characteristics 289
    5.4.2.2 Operating Domain 290
## CONTENTS

5.5 Control of SVC Operation 294  
5.5.1 The Voltage Regulator 294  
5.5.2 Gate Pulse Generator 296  
5.6 SVC Modeling 296  
5.6.1 Steady-State SVC Modeling 296  
5.6.1.1 Modeling of an SVC That Operates Within or Outside the Linear Control Domain 297  
5.6.1.2 Improved Models for SVC Representation 299  
5.6.1.3 Newton–Raphson Modified Algorithm to Include the SVCs 305  
5.6.2 SVC Dynamic Modeling 307  
5.6.2.1 The Basic Dynamic Model 307  
5.6.2.2 First-Order Dynamic Model 308  
5.6.2.3 Complex SVC Dynamic Models 309  
5.7 Placement of SVC 312  
5.8 Applications of SVC 314  
5.8.1 Maintaining the Voltage Level of a Bus or into an Area 315  
5.8.2 Increasing the Transmission Capacity 315  
5.8.3 Static and Transient Stability Reserve Improvement 317  
5.8.4 Oscillations Damping 322  
5.8.5 Reducing the Transient Overvoltages 323  
5.9 SVC Installations Worldwide 324  
5.9.1 SVC at Hagby, in Sweden 326  
5.9.2 SVC at Forbes, in United States 327  
5.9.3 SVC in Temascal, Mexico 328  
5.9.4 Complex Compensation Scheme in Argentina 329  
5.9.5 SVC in the 735 kV Transmission System in Canada 329  
5.9.6 SVC at Auas, in Namibia 330  
5.9.7 SVC at the Channel Tunnel Rail Link 333  
5.9.8 SVC at Harker, in United Kingdom 334  
5.9.9 Relocatable SVCs 336  
5.9.10 References 337

CHAPTER 6 SERIES CAPACITIVE COMPENSATION 339  
Mircea Eremia and Stig Nilsson

6.1 Generalities 339  
6.2 Mechanical Commutation-Based Series Devices 339  
6.3 Static-Controlled Series Capacitive Compensation 342  
6.3.1 GTO-Controlled Series Capacitor 342  
6.3.2 Thyristor-Switched Series Capacitor 345  
6.3.3 Thyristor-Controlled Series Capacitor 348  
6.3.3.1 Basic Structure 349  
6.3.3.2 Operating Principles of TCSC, Steady-State Approach and Synchronous Voltage Reversal 351  
6.3.3.3 Operation Modes and the Characteristics of the TCSC 357  
6.3.3.4 Capability Characteristics of the TCSC 362  
6.4 Control Schemes for the TCSC 365  
6.4.1 Open Loop Impedance Control 365  
6.4.2 Closed Loop Control 366  
6.5 TCSC Modeling 370
## CONTENTS

6.5.1 Steady-State Modeling of TCSC 370
   6.5.1.1 TCSC Modeling Through Series Variable Impedance 370
   6.5.1.2 TCSC Impedance Modeling as a Function of the Firing Angle 374

6.5.2 TCSC Dynamic Models 376
   6.5.2.1 Transient Stability Model 376
   6.5.2.2 Long-Term Stability Model 379

6.6 Applications of TSSC/TCSC Installations 382

6.7 Series Capacitors Worldwide 387
   6.7.1 Kanawha River Mechanically Switched Series Capacitor in United States 387
   6.7.2 Kayenta TCSC in United States 389
   6.7.3 Slatt TCSC in United States 392
   6.7.4 Stöde TCSC in Sweden 396
   6.7.5 Imperatriz-Serra da Mesa TCSC in Brazil 397
   6.7.6 Purnea and Gorakhpur TCSC/FSC in India 400
   6.7.7 Series-Compensated 500 kV Power Transmission Corridors in Argentina 402

Appendix 6.1 TCSC Systems Around the World 404

References 405

### CHAPTER 7  
**PHASE SHIFTING TRANSFORMER: MECHANICAL AND STATIC DEVICES**  
Mylavarapu Ramamoorty and Lucian Toma

7.1 Introduction 409

7.2 Mechanical Phase Shifting Transformer 410
   7.2.1 Principle of Operation of the PST 410
   7.2.2 PST Topology 412
      7.2.2.1 Direct-Type Asymmetrical PSTs 412
      7.2.2.2 Direct-Type Symmetrical PSTs 414
      7.2.2.3 Indirect-Type Asymmetrical and Symmetrical PSTs 416
      7.2.2.4 Comparison of the Topologies 417
   7.2.3 Steady-State Model of a Mechanical Phase Shifter 418
   7.2.4 Equivalent Series Reactance as a Function of the Phase Shift Angle 420
      7.2.4.1 Symmetrical Phase Shifter 420
      7.2.4.2 Quadrature Booster 424
      7.2.4.3 Asymmetrical Phase Shifter 425
      7.2.4.4 In-Phase Transformer and Symmetrical/Asymmetrical Phase Shifter 426

7.3 Thyristor-Controlled Phase Shifting Transformer 428
   7.3.1 Configurations of the Static Phase Shifter 428
      7.3.1.1 Substitution of Mechanical Tap Changer by Electronic Switches 429
      7.3.1.2 Thyristor-Controlled Quadrature Voltage Injection 429
      7.3.1.3 Pulse-Width Modulation AC Controller 432
      7.3.1.4 Delay-Angle Controlled AC-AC Bridge Converter 433
      7.3.1.5 Discrete-Step Controlled AC-AC Bridge Converter 434
      7.3.1.6 PWM Voltage Source Converter 434
   7.3.2 Modeling of TCPST 436
      7.3.2.1 Model of a Transmission System with a TCPST 436
CONTENTS

7.3.2.2 Line Model with Thyristor-Controlled Phase Angle Regulator 437
7.3.2.3 The Dynamic Model of the Phase Shifter 439

7.4 Applications of the Phase Shifting Transformers 439
7.4.1 Power Flow Control by Phase Angle Regulators 440
7.4.2 Real and Reactive Loop Power Flow Control 442
7.4.3 Improvement of Transient Stability with PST 444
7.4.4 Power Oscillation Damping with PST 446
7.4.4.1 Application to Damp Power Oscillations 448

7.5 Phase Shifting Transformer Projects Around the World 450
References 456

CHAPTER 8 STATIC SYNCHRONOUS COMPENSATOR – STATCOM 459
Rafael Mihalic, Mircea Eremia, and Bostjan Blazic

8.1 Principles and Topologies of Voltage Source Converter 459
8.1.1 Basic Considerations 459
8.1.2 Converter Topologies 464
8.1.2.1 Two-Level Topologies 464
8.1.2.2 Multilevel Topologies 469
8.1.2.3 PWM Converter 471
8.1.3 Switching Function 472

8.2 STATCOM Operation 473

8.3 STATCOM Modeling 476
8.3.1 STATCOM Model for Steady-State Analysis 476
8.3.1.1 Basic Load Flow Equations 478
8.3.1.2 The Single-Phase Voltage-Based Model 480
8.3.1.3 The Single-Phase Current-Based Model 482
8.3.1.4 Three-Phase Voltage-Based Model 484
8.3.1.5 Three-Phase Current-Based Model 487
8.3.2 Dynamic Models of STATCOM 492
8.3.2.1 Simplified Dynamic Model 492
8.3.2.2 Detailed Dynamic Model 494
8.3.3 Control Algorithm 499
8.3.4 STATCOM Model for Unbalanced Operation 501

8.4 STATCOM Applications 506
8.4.1 Fast Voltage Control and Maintaining Voltage Levels of a Bus or an Area 506
8.4.2 Flicker Compensation 506
8.4.3 Improvement of the Network Transmission Capability 509
8.4.4 Improvement of Static and Transient Stability Reserve 512
8.4.5 Oscillations Damping 514

8.5 STATCOM Installations in Operation 515
8.5.1 ± 80 MVAR STATCOM in Japan 515
8.5.2 ± 100 MVAR STATCOM at Sullivan, in United States 516
8.5.3 +225/–52 MVAR TSC and STATCOM Mixed System at East Claydon, in Great Britain 520
8.5.4 +133/–41 MVAR STATCOM at Essex, in United States 520
8.5.5 STATCOM (+80/–110 MVAR) and Mechanic-Switched Capacitor (~93 MVAR) Mixed System, at Holly, in United States 521
8.5.6 ±100 MVAR STATCOM at Talega, in United States 522

CHAPTER 9  STATIC SYNCHRONOUS SERIES COMPENSATOR (SSSC)  527
Laszlo Gyugyi, Abed-Aty Edris, and Mircea Eremia

9.1 Introduction  527
9.2 Architecture and Operating Principles  528
  9.2.1 The Basic Structure and Principles of Operation  528
  9.2.2 Operating Modes of SSSC  530
  9.2.3 The $P_q\delta$ Characteristic of SSSC  532
9.3 Comparison of SSSC with Other Technologies  533
  9.3.1 Comparison with Fixed Series Capacitor  533
  9.3.2 Comparison with Fixed Series Reactor  534
  9.3.3 Comparison with Phase Angle Regulator  534
  9.3.4 Comparison with Thyristor-Controlled Series Capacitor  535
  9.3.5 Comparison with Gate-Controlled Series Capacitor  538
  9.3.6 Dynamic Flow Controller  540
9.4 Components of an SSSC  540
  9.4.1 Overview of the Functional SSSC Components  540
  9.4.2 Control  542
  9.4.3 Protection  545
9.5 SSSC Modeling  546
  9.5.1 Steady-State SSSC Model  546
    9.5.1.1 VSC Controller Load Flow Models  546
    9.5.1.2 Newton–Raphson Load Flow Solution  547
  9.5.2 SSSC Dynamic Model  549
9.6 Applications  551
9.7 SSSC Installation  552
  9.7.1 SSSC in Operation  552
  9.7.2 SSSC for Power Flow Control: A Project in Spain  553
    9.7.2.1 Project Overview  553
    9.7.2.2 Components of the SSSC  554
    9.7.2.3 Location Selection for Prototype Installation  555

CHAPTER 10  UNIFIED POWER FLOW CONTROLLER (UPFC)  559
Laszlo Gyugyi

10.1 Introduction  559
  10.1.1 UPFC as the Functional Combination of Conventional Transmission
         Controllers  559
  10.1.2 UPFC Directly Providing Line Current Forcing Function  566
10.2 Basic Characteristics of the UPFC  567
10.3 UPFC Versus Conventional Power Flow Controllers  571
  10.3.1 UPFC versus Series Reactive Compensators  571
  10.3.2 UPFC versus Phase Shifters  573
10.4 UPFC Control System  575
  10.4.1 Functional Control of the Shunt Converter  578
  10.4.2 Functional Control of the Series Converter  579
  10.4.3 Stand-Alone Shunt and Series Compensation  580
  10.4.4 Basic Control Structure for the Series and Shunt Converters  580
  10.4.5 Practical Control Considerations  583
References  584
CONTENTS

10.5 Equipment Structural and Rating Considerations 584
  10.5.1 Circuit Structural Considerations 586
  10.5.2 Rating Considerations for Series and Shunt Converters 588
    10.5.2.1 Series Converter Rating to Meet Line Compensation Requirements 588
    10.5.2.2 Shunt Converter Rating to Meet UPFC Operation Requirements 592
  10.5.3 UPFC Rating Optimization by Combined Compensation 594
10.6 Protection Considerations 596
  10.6.1 Protection of the Series Converter 596
  10.6.2 Protection of the Shunt Converter 600
10.7 Application Example: UPFC at AEP’s INEZ Station 600
  10.7.1 Background and Planning Information at the Time of Installation 601
  10.7.2 UPFC Operation Strategy 603
  10.7.3 Description of the UPFC 604
  10.7.4 Performance of the UPFC 607
  10.7.5 Importance of Results and Possible Future Trends 613
10.8 Modeling of the UPFC Device 613
  10.8.1 The Steady-State Model of UPFC 613
  10.8.2 Power Flow and Active Power Balance Restrictions 616
  10.8.3 Implementing the UPFC Model in the Newton–Raphson Method 618
  10.8.4 The Dynamic Model of UPFC 623
References 627

CHAPTER 11 INTERLINE POWER FLOW CONTROLLER (IPFC) 629
Laszlo Gyugyi

11.1 Generalities 629
11.2 Basic Operating Principles and Characteristics of the IPFC 630
11.3 Generalized Interline Power Flow Controller for Multiline Systems 636
11.4 Basic Control System 638
11.5 Equipment Structural and Rating Considerations 640
11.6 Protection Considerations 642
11.7 Application Example: IPFC at NYPA’s Marcy Substation 643
  11.7.1 Background Information, System, and Equipment Requirements 643
  11.7.2 Description of the CSC/IPFC 644
  11.7.3 Importance of the NYPA Installation 645
References 649

CHAPTER 12 SEN TRANSFORMER: A POWER REGULATING TRANSFORMER 651
Kalyan K. Sen

12.1 Background 651
  12.1.1 Traditional Power Flow Controllers 652
  12.1.2 Essential Control Parameters and Their Implementations 655
12.2 The Sen Transformer Concept 656
  12.2.1 Shunt-Series Configuration for ST 657
  12.2.2 Principle of Operation of ST 658
PART III  ARTIFICIAL INTELLIGENCE TECHNIQUES
Chen-Ching Liu and Mircea Eremia

CHAPTER 14  ARTIFICIAL INTELLIGENCE AND COMPUTATIONAL INTELLIGENCE: A CHALLENGE FOR POWER SYSTEM ENGINEERS
Chen-Ching Liu, Alexandru Stefanov, and Junho Hong

CHAPTER 15  EXPERT SYSTEMS
Mircea Eremia, Kevin Tomsovic, and Gheorghe Cărtăria

15.1  Fundamental Concepts 731
  15.1.1  Definitions 731
  15.1.2  Expert System Characteristics 732
  15.1.3  Artificial Expertise or Human Expertise? 734

15.2  Architecture of Expert Systems 735
  15.2.1  Knowledge Base 735
    15.2.1.1  Knowledge Representation 735
    15.2.1.2  Facts Database 737
    15.2.1.3  Quality of Knowledge Base 738
  15.2.2  Inference Engine 738
    15.2.2.1  Inference Mechanisms 739
    15.2.2.2  Inference Engine Components 742
    15.2.2.3  Other Modules 743

15.3  Expert Systems Application 745
  15.3.1  Expert System for V–Q Control in Power Systems 745
    15.3.1.1  The Structure of the Expert System 745
    15.3.1.2  The Algorithmic Calculation Module 746
    15.3.1.3  The Heuristic Module 748
    15.3.1.4  Case Study 750
  15.3.2  Other Applications of Expert Systems 751
    15.3.2.1  Expert System for Distribution Networks Reconfiguration 751
    15.3.2.2  Expert System Power System Restoration After Blackouts 753

CHAPTER 16  NEURAL NETWORKS
Dagmar Niebur, Ganesh Kumar Venayagamoorthy, and Ekrem Gursoy

16.1  Introduction 755

16.2  Neural Network Architectures 755
  16.2.1  Feedforward Neural Networks 756
    16.2.1.1  The Multi-Layer Perceptron 756
    16.2.1.2  Radial Basis Function Networks 757
  16.2.2  Feedback (Recurrent) Neural Networks 758

16.3  Adaptive Critic Designs 759

16.4  Independent Component Analysis 760

16.5  Learning Algorithms: The Determination of Weights 760
  16.5.1  Supervised Learning Objectives 761
## 18. Decision Trees

**18.1 Decision Tree Construction** 821

**18.2 Decision Tree Pruning** 824

- 18.2.1 Reduced Error Pruning 825
- 18.2.2 Pessimistic Error Pruning 826
- 18.2.3 Minimum Error Pruning 827
- 18.2.4 Critical Value Pruning 827
- 18.2.5 Cost-Complexity Pruning 828
- 18.2.6 Error-Based Pruning 829

**18.3 Oblique Decision Trees** 829

- 18.3.1 Recursive Least Squares Procedure 830
- 18.3.2 The Thermal Training Procedure 831
- 18.3.3 OC1 Algorithm 831

**18.4 Applications of Decision Trees in Power Systems** 833

**18.5 Case Study** 836

**References** 843

## 19. Genetic Algorithms

Anastasios Bakirtzis and Spyros Kazarlis

**19.1 Introduction to Evolutionary Computation** 845

- 19.1.1 Taxonomy 846
- 19.1.2 Initial Inspiration and Basic Principles 846
- 19.1.3 On the Evolution Theory 848
- 19.1.4 DNA-Like Solution Encoding 849
- 19.1.5 Solution Evaluation 851
- 19.1.6 Genetic Information Recombination 852
- 19.1.7 The Circle of Evolution 853
- 19.1.8 Evolutionary Algorithms as Global Optimizers 853
- 19.1.9 Evolutionary Computation Paradigms 854
- 19.1.10 Application Areas 857
- 19.1.11 Advantages and Disadvantages 858

**19.2 Genetic Algorithms** 859

- 19.2.1 Basic GA Principles 860
- 19.2.2 GA Flow Diagram 862
- 19.2.3 Solution Encoding 863
- 19.2.4 Fitness Function 869
- 19.2.5 Parent Selection Methods 870
- 19.2.6 Basic Genetic Operators 873
  - 19.2.6.1 The Crossover Operator 873
  - 19.2.6.2 Mutation 877
- 19.2.7 Elitism 878
- 19.2.8 Other Genetic Operators 879
- 19.2.9 Hill-Climbing Operators 880
- 19.2.10 Parent Replacement Methods 883
- 19.2.11 Fitness Scaling 884
- 19.2.12 GA Control Parameters Determination 887
- 19.2.13 Niche and Species 888
- 19.2.14 Diversity Enhancement 893
- 19.2.15 Constrained Optimization with GAs 894
CONTENTS

19.3 On The Optimal Location and Operation of FACTS Devices by Genetic Algorithms 897

CHAPTER 20 MULTIAGENT SYSTEMS 903
Nan-Peng Yu and Chen-Ching Liu

20.1 Overview 903
  20.1.1 What is an Agent? What is a Multiagent System? 904
  20.1.2 Why Multiagent Systems? 904
  20.1.3 Applications of Multiagent Technology 904
    20.1.3.1 Industrial Applications 905
    20.1.3.2 Commercial Applications 906
    20.1.3.3 Medical Applications 907
    20.1.3.4 Entertainment Applications 907
  20.1.4 Challenges and Future of Multiagent Technology 908
    20.1.4.1 Design Methodologies for Software Development of Agent-Based Systems 908
    20.1.4.2 Ensure User Confidence and Trust in Agent-Based Systems 908
    20.1.4.3 Enable Agent Adaptation in Artificial System 908
    20.1.4.4 Promote Interoperability in an Open Environment 909
    20.1.4.5 Develop Semantic Infrastructure and Common Ontology for Agent Communication and Information Management 909
    20.1.4.6 Enhance Reasoning Capabilities for Agents in Open Environment 909

20.2 Multiagent Technology Overview 909
  20.2.1 Architectures for Intelligent Agents 909
    20.2.1.1 Logic-Based Architectures 910
    20.2.1.2 Reactive Architectures 910
    20.2.1.3 Belief-Desire-Intention Architectures 911
    20.2.1.4 Layered (Hybrid) Architectures 911
  20.2.2 Multiagent Systems and Societies of Agents 912
    20.2.2.1 Communication 912
    20.2.2.2 Negotiation 913
    20.2.2.3 Coordination 913
  20.2.3 Programming Languages, Tools, and Frameworks for Multiagent Systems 914
    20.2.3.1 Programming Languages for Multiagent Systems 914
    20.2.3.2 Integrated Development Environment 915
    20.2.3.3 Frameworks for Multiagent Systems Development 915
  20.2.4 Multiagent System-Related Standards 915
    20.2.4.1 The Foundation for Intelligent Physical Agents 915
    20.2.4.2 The Object Management Group 917

20.3 Applications of Multiagent Systems in Power Engineering 917
  20.3.1 Modeling and Simulation 917
  20.3.2 Monitoring and Diagnostics 918
  20.3.3 Restoration and Reconfiguration 919
  20.3.4 Distributed Control 919

20.4 Electricity Markets Modeling and Simulation with Multiagent Systems 920
  20.4.1 Why Multiagent System? 921
CONTENTS

20.4.2 Literature on Multiagent-Based Modeling of Electricity Markets 921
20.4.3 Multiagent System Design for Electricity Market Modeling and Simulation 922
  20.4.3.1 Purpose 922
  20.4.3.2 MAS Structure 923
  20.4.3.3 Agents 924
References 927

CHAPTER 21 HEURISTIC OPTIMIZATION TECHNIQUES 931
Kwang Y. Lee, Malihe M. Farsangi, Jong-Bae Park, and John G. Vlachogiannis

21.1 Introduction 931
21.2 Evolutionary Algorithms for Reactive Power Planning 932
  21.2.1 Evolutionary Algorithms 932
    21.2.1.1 Evolutionary Programming 932
    21.2.1.2 Evolutionary Strategy 933
    21.2.1.3 Genetic Algorithm 934
  21.2.2 Optimal Reactive Power Planning Problem 935
    21.2.2.1 Objective Functions 935
    21.2.2.2 P–Q Decomposition 936
  21.2.3 Case Studies 937
21.3 Genetic Algorithm for Generation Planning 943
  21.3.1 Generation Expansion Planning Problem 943
  21.3.2 Improved GA for the Least-Cost GEP 945
    21.3.2.1 Overview of Genetic Algorithm 945
    21.3.2.2 String Structure 945
    21.3.2.3 Fitness Function 945
    21.3.2.4 Creation of an Artificial Initial Population 946
    21.3.2.5 Stochastic Crossover, Elitism, and Mutation 947
  21.3.3 Case Studies 948
    21.3.3.1 Test Systems Description 948
    21.3.3.2 Parameters for GEP and IGA 949
    21.3.3.3 Numerical Results 950
21.4 Particle Swarm Optimization for Economic Dispatch 951
  21.4.1 Formulation of Economic Dispatch Problem 952
    21.4.1.1 ED Problem with Smooth Cost Functions 952
  21.4.2 Implementation of PSO for ED Problems 954
    21.4.2.1 Overview of the PSO 954
    21.4.2.2 Modified PSO for ED Problems 955
    21.4.2.3 Case Studies 958
    21.4.2.4 ED Problem with Smooth Cost Functions 959
    21.4.2.5 ED Problem with Nonsmooth Cost Functions Considering Valve-Point Effects 959
21.5 Ant Colony System for Constrained Load Flow Problem 961
  21.5.1 Formulation of Constrained Load Flow Problem 961
  21.5.2 Development of Ant Colony System for the Constrained Load Flow Problem 962
  21.5.3 Results 965
CONTENTS

21.6 Immune Algorithm for Damping of Interarea Oscillation 968
   21.6.1 Study System and Problem Formulation 969
   21.6.2 Designing of Supplementary Controller 971
21.7 Simulated Annealing and Tabu Search for Optimal Allocation of Static VAr Compensators 974
   21.7.1 Voltage Stability Analysis 974
   21.7.2 Simulated Annealing 975
   21.7.3 Tabu Search 975
   21.7.4 Study System and Optimal Allocation of SVCs 976
      21.7.4.1 A 5-Area-16-Machine System 976
      21.7.4.2 Optimal Allocation of SVCs 976
21.8 Conclusions 980
References 981

CHAPTER 22 UNSUPERVISED LEARNING AND HYBRID METHODS 985
Nikos Hatziargyriou and Manolis Voumvoulakis

22.1 Generalities 985
22.2 Supervised Learning Methods 988
   22.2.1 Decision Trees 988
   22.2.2 Neuro-Fuzzy Decision Trees 990
   22.2.3 Radial Basis Function Neural Networks 992
22.3 Unsupervised Learning Methods 996
   22.3.1 Self-Organized Maps 996
22.4 Som Variants 1000
   22.4.1 Evolving SOM 1001
   22.4.2 Growing Hierarchical Self-Organized Map 1002
   22.4.3 Growing Neural Gas 1004
   22.4.4 Variable Local Topology-Self-Organized Map 1006
22.5 Combined Use of Unsupervised with Supervised Learning Methods 1007
22.6 Applications to Power Systems 1007
   22.6.1 Description of the Power System 1007
      22.6.1.1 RBFNN for DSA 1009
      22.6.1.2 Decision Trees for DSA 1010
      22.6.1.3 Decision Trees Application for Load Shedding 1011
      22.6.1.4 Genetic Algorithm Aided DTs for Load Shedding 1012
      22.6.1.5 Neuro-Fuzzy Decision Trees for DSA 1013
      22.6.1.6 SOM Application for Load Shedding 1014
      22.6.1.7 Decision Trees Aided SOM for Load Shedding 1016
   22.6.2 Preventive Security Control 1018
      22.6.2.1 Study Case System 1019
      22.6.2.2 Decision Trees for Security Constrained Economic Dispatch 1020
   22.6.3 Power System-Controlled Islanding 1022
      22.6.3.1 Application of the Method on the IEEE 30 Bus Test System 1027
      22.6.3.2 Application of the Method on the IEEE 118 Bus Test System 1028
