Contents

Preface  xiii

1 Overvoltage Mechanisms in Power Systems  1
  1.1 Electromagnetic Transients and Overvoltage Classification  1
  1.1.1 Electromagnetic Transients in Power System  1
  1.1.2 Characteristics and Research Methods of Electromagnetic Transients  2
    1.1.2.1 Refraction and Reflection of Travelling Waves  4
    1.1.2.2 Peterson Principle  5
    1.1.2.3 Multiple Refraction and Reflection of Travelling Waves  9
  1.2 Overvoltage Classification in Power Systems  14
    1.2.1 Overvoltage Classification  14
  1.3 Atmospheric Overvoltages  16
    1.3.1 Lightning Discharge  16
    1.3.2 Lightning Parameters  18
      1.3.2.1 Frequency of Lightning Activities – Thunderstorm Days and Thunderstorm Hours  18
      1.3.2.2 Ground Flash Density  19
      1.3.2.3 Lightning Current Amplitude  19
      1.3.2.4 Front Time, Front Steepness and Wavelength of the Lightning Current  19
      1.3.2.5 Lightning Current Waveforms for Calculation  19
    1.3.3 Induced Lightning Overvoltages  20
      1.3.3.1 Induced Lightning Overvoltages on the Line When Lightning Strikes the Ground Near the Line  20
      1.3.3.2 Induced Overvoltages on the Line When Lightning Strikes the Line Tower  22
    1.3.4 Direct Lightning Overvoltages  23
      1.3.4.1 Overvoltages Due to Lightning Striking the Tower Top  23
      1.3.4.2 Overvoltages Due to Lightning Striking the Ground Wire at Midspan  24
      1.3.4.3 Overvoltages Due to Shielding Failures  25
  1.4 Switching Overvoltages  26
    1.4.1 Closing Overvoltages  26
      1.4.1.1 Overvoltages Caused by Closing Unloaded Lines  26
      1.4.1.2 Overvoltages Caused by Planned Closing  26
      1.4.1.3 Overvoltages Caused by Automatic Reclosing  28
1.4.1.4 Factors Influencing Closing Overvoltages  29
1.4.1.5 Measures for Suppressing Closing Overvoltages  30
1.4.2 Opening Overvoltages  30
1.4.2.1 Overvoltages Caused by De-Energizing Unloaded Lines  30
1.4.2.2 Physical Process  31
1.4.2.3 Influencing Factors  33
1.4.2.4 Measures  33
1.4.2.5 Switching Off Unloaded Transformers  34
1.4.2.6 Cause and Physical Process  34
1.4.2.7 Waveform Characteristics  36
1.4.2.8 Influencing Factors  37
1.4.2.9 Restrictive Measures  38
1.4.3 Arc Grounding Overvoltages  38
1.4.3.1 Cause and Formation  39
1.4.3.2 Overvoltage Characteristics and Waveforms  41
1.4.3.3 Influencing Factors  42
1.4.3.4 Restrictive Measures  43
1.4.4 Power System Splitting Overvoltages  44
1.5 Power Frequency Overvoltages  47
1.5.1 Power Frequency Overvoltages due to the Ferranti Effect  48
1.5.2 Power Frequency Voltage Rise Due to Asymmetrical Short-Circuit Faults  51
1.5.3 Power Frequency Voltage Rise Due to Load Rejection  54
1.5.4 Precautionary Measures for Power Frequency Overvoltages  54
1.6 Resonance Overvoltages  55
1.6.1 Linear Resonance Overvoltages  56
1.6.2 Ferro-Resonance Overvoltages  59
1.6.3 Parametric Resonance Overvoltages  62

2 Transducers for Online Overvoltage Monitoring  65
2.1 Overvoltage Transducers at Transformer Bushing Taps  65
2.1.1 Design  65
2.1.1.1 Structural Design of the Main Body  65
2.1.1.2 Protection Unit Design  67
2.1.2 Parameter Setting  68
2.1.2.1 Capacity of Voltage-Dividing Capacitance  68
2.1.2.2 Voltage Rating  69
2.1.3 Feasibility Analysis  70
2.1.3.1 Error Analysis and Dynamic Error Correction  70
2.1.3.2 Impulse Response Characteristics Tests  71
2.2 Gapless MOA Voltage Transducers  72
2.2.1 Design  74
2.2.2 Operating Properties and Feasibility Analysis  75
2.2.2.1 Working in the Small Current Section  75
2.2.2.2 Working in the Large Current Range  76
2.2.3 Analysis of Field Applications  79
2.3 Voltage Transducers for Transmission Lines  81
2.3.1 Structure Design  81
2.3.1.1 Selection of Shielding Materials  82
2.3.1.2 Influence of the Shielding Shell on the Measurement  83
2.3.2 Series-Connection Capacitance Calculation and ANSOFT Field Simulation  84
2.3.2.1 Calculation of the Stray Capacitance $C_1$  84
2.3.2.2 3D Capacitance Simulation Using Ansoft Maxwell  85
2.3.3 Experimental Verification of the Transducer Model  89
2.3.3.1 Result Analysis of the Power Frequency Experiment  89
2.3.3.2 Result Analysis of Lightning Impulse Experiment  92
2.4 Full-Waveform Optical Online Monitoring Technology  93
2.4.1 Pockels Sensing Material Selection and Crystal Design  93
2.4.1.1 Selection of Pockels Sensing Material  93
2.4.1.2 Technical Requirements for BGO Crystals  94
2.4.1.3 Technical Requirements for BGO Transparent Conductive Films  95
2.4.2 Longitudinal and Transverse Electro-Optical Modulation  95

3  Online Overvoltage Monitoring System  99
3.1 Overview  99
3.2 The Structure of Overvoltage Monitoring Systems  102
3.3 Acquisition Devices of Overvoltage Monitoring Systems  103
3.3.1 Design of the Signal Preprocessing Circuit  103
3.3.2 Design of the Trigger Circuit  104
3.3.3 Design of the Protection Unit Control Circuit  105
3.3.4 Selection of the Data Acquisition Card  106
3.3.4.1 Properties  106
3.3.4.2 Data Sampling Theory of the Acquisition Card  107
3.4 Overvoltage Signal Transmission System  109
3.4.1 Overvoltage Signal Transmission and Monitoring in Internal Networks  109
3.4.1.1 Private Communication Networks  109
3.4.1.2 General Structure  110
3.4.1.3 Implementation of Internal Network Monitoring  112
3.4.2 Transmission and Monitoring Based on Wireless Public Networks  113
3.4.2.1 GSM Networks – Introduction  113
3.4.2.2 General Structure of Systems Based on GSM Networks  114
3.4.2.3 General Structure of the GPRS-Based Transmission Systems  115
3.4.2.4 10 Gb All-Optical Carrier Ethernet (CE)  116
3.4.2.5 InfiniBand Network  120
3.5 Overvoltage Waveform Analysis System  121
3.5.1 Introduction to the Waveform Analysis Software  121
3.5.2 Functions and Interface Design  122
3.5.2.1 Serial Communication Interface  122
3.5.2.2 Data-Loading Interface  122
3.5.2.3 Spectrum Analysis Interface  122
3.5.4 Main Interface  122
3.6 Remote Terminal Analysis System for Overvoltage Waveforms  123
3.7 Case Study of Online Overvoltage Measurements  125
3.7.1 Lightning Overvoltages  125
Contents

3.7.1.1 Direct Lightning Overvoltages 125
3.7.1.2 Induced Lightning Overvoltages 127
3.7.2 Power Frequency Overvoltages 128
3.7.3 Resonance Overvoltages 131
3.7.3.1 Case One 131
3.7.3.2 Measuring Methods 132
3.7.3.3 Measurement Results 133
3.7.3.4 Analysis 135
3.7.3.5 Case Two 135
3.7.4 Statistical Analysis of Overvoltages in a 110 kV Substation 137
3.7.4.1 Typical Waveforms 137
3.7.4.2 Data Statistics and Analysis 138
3.7.4.3 Conclusions 139
3.7.5 Single-Phase Grounding Overvoltages 140
3.7.6 Two-Phase Grounding Overvoltages 141
3.7.7 Intermittent Arc Grounding Overvoltages 141
3.7.8 Case Study: Measurement of Transient Voltages When Energizing CVTs 142
3.7.8.1 Onsite Arrangement 142
3.7.8.2 Measurement Results 143
3.7.9 Case Study: Transient Voltage Measurement When Energizing Unloaded Lines 149
3.8 Statistical Analysis of Overvoltages 151
3.8.1 Statistical Analysis of Phase-to-ground Overvoltages 151
3.8.2 Calculation of Overvoltage Characteristic Values 151
3.8.3 Determination of Insulation Levels of Substation Electrical Equipment 152
3.8.3.1 Case Study of the Overvoltages in the 35 kV System of a Substation 152

4 Wave Process of Incoming Surges and Transient Response

4.1 Current State of Incoming Surge Research 155
4.2 Wave Process under Complex Conditions 156
4.2.1 Wave Process in Lossless Parallel Multi-Conductor Systems 156
4.2.2 Wave Propagation along Lossy Lines 159
4.2.2.1 Line Loss 159
4.2.2.2 Impact of Line Resistance and Line-to-Ground Conductance 159
4.2.2.3 Impact of Impulse Corona 160
4.2.3 Wave Process on Transformer Windings 162
4.2.3.1 Wave Process in Single-Phase Windings 162
4.2.3.2 Wave Process in Three-Phase Windings 166
4.2.3.3 Transfer of Impulse Voltage Between Windings 168
4.3 Generation of Lightning Overvoltages on Electrical Equipment 169
4.4 Simulation of Incoming Surges in Substations 172
4.5 Influencing Factors of Substation Incoming Surges 174
4.5.1 Influences of Lightning Stroke Types on Incoming Surges 174
4.5.1.1 Shielding Failure Without Flashover 176
4.5.1.2 Shielding Failure with Flashover 176
Contents

4.5.1.3 Lightning Striking Ground Wires (or Transmission Towers) Without Flashover 177
4.5.1.4 Lightning Striking Ground Wires (or Transmission Towers) with Flashover 179
4.5.2 Influences of Transmission Lines on Overvoltage Wave Propagation 181
4.5.3 Influences of In-Station Equipment on Overvoltage Wave Propagation 184
4.5.3.1 Potential Transformers (PT) 184
4.5.3.2 Arresters 184
4.6 Typical Waveforms of Substation Incoming Surges 187
4.6.1 Short-Front-Short-Tail Surges 187
4.6.2 Short-Front-Long-Tail Surges 192
4.6.3 Long-Front-Long-Tail Surges 192
4.6.4 Long-Front-Short-Tail Surges 192
4.7 Response Characteristics of Lightning Overvoltages Propagating in the Grid 196
4.7.1 Status Quo 196
4.7.2 Research Scheme 197
4.8 Lightning Location System (LLS) 202
4.8.1 Overview and Current Situation 202
4.8.2 Detection Principles 203
4.8.2.1 Typical LLS Locating Methods 204
4.8.2.2 Time of Arrival Method 205
4.8.2.3 Calculation Model for the Lightning Current Peak 207
4.8.2.4 Error Analysis 207
4.8.3 System Structure 208
4.8.4 Applications 208

5 Typical Field Tests and Waveform Analysis in UHVDC Transmission Systems 213
5.1 Waveform Acquisition and Analysis in Typical Tests 213
5.1.1 Classification of Overvoltages in Converter Stations 213
5.1.1.1 Overvoltages from the Substation AC Side 213
5.1.1.2 Overvoltages from the Substation DC Side 213
5.1.1.3 Overvoltages from DC Lines 214
5.1.1.4 Switching Overvoltages in UHVDC Transmission System 214
5.1.2 Overvoltage Test Methods and Principles 216
5.2 Typical Field Tests for the UHVDC Transmission System 219
5.2.1 Disconnecting Converter Transformers 219
5.2.2 Connecting Converter Transformers 221
5.2.3 Converter Valve Debloating 223
5.2.4 Emergency Switch-Off 223
5.2.5 Simulated Single-Phase Grounding Faults on ac Lines 225

6 Overvoltage Digital Simulation 231
6.1 Overvoltage Digital Simulation Software 231
6.2 Evaluation of Switching Overvoltages 232
6.2.1 Evaluation of Opening Overvoltages 232
6.2.2 Evaluation of Closing Overvoltages 236
6.2.3 Restrictive Measures for Switching Overvoltages 245
6.2.3.1 Overvoltages Caused by Closing or Reclosing Unloaded Lines 247
6.2.3.2 Switching Overvoltages Caused by Disconnecting Unloaded Transformers and Shunt Reactors 247
6.2.3.3 Switching Overvoltages Caused by Asymmetrical Faults and Oscillation Overvoltages Due to System Splitting 248

6.3 Evaluation of Power Frequency Overvoltages 248
6.3.1 Calculation of the Ferranti Effect 248
6.3.1.1 Capacitance Effects of Unloaded Long Lines 249
6.3.2 Evaluation of Asymmetrical Short-circuit Faults 252
6.3.3 Simulation of Asymmetric Grounding Faults 254
6.3.4 Restrictive Measures for Power Frequency Overvoltages 256

6.4 Evaluation of Atmospheric Overvoltages 258
6.4.1 Lightning Parameters 259
6.4.2 Equivalent Circuit of Lightning Discharge 261
6.4.3 Lightning Overvoltages 262
6.4.3.1 Direct Lightning Overvoltages 262
6.4.3.2 Induced Lightning Overvoltages 262
6.4.4 Evaluation of Induced Lightning Overvoltages 262
6.4.5 Evaluation of Direct Lighting Overvoltages 263
6.5 Evaluation of Ferro-Resonance Overvoltages 267
6.5.1 Electromagnetic PT Module 267
6.5.1.1 Acquisition of PT Excitation Characteristic Curve 269
6.5.2 Establishment of Open Delta PT Model 272
6.5.2.1 Establishment of Single-Phase Three-Winding (Y-Y₀) PT Model 274
6.5.2.2 Establishment of Three-Phase Three-Winding PT Models 275
6.5.3 Transformer Module 275
6.5.3.1 Calculation Principles of Winding Parameters 275
6.5.3.2 Calculation of Transformer Excitation Resistance 276
6.5.4 Bus Module 277
6.5.4.1 Line Resistance 277
6.5.4.2 Line Inductance 277
6.5.4.3 Line Capacitance 278
6.5.5 Ferro-Resonance Overvoltage Simulation Results 278
6.6 Evaluation of Very-Fast Transient Overvoltages 280
6.6.1 VFTO Mechanism 280
6.6.2 VFTO Models and Parameters 281
6.6.3 VFTO Simulation and Field Tests 281
6.7 Transient Calculation for UHVDCTransmission Systems 283
6.7.1 PSCAD Models for UHVDCTransmission Components 283
6.7.1.1 Converter Valves 286
6.7.1.2 Converter Transformers 288
6.7.1.3 Line Models 288
6.7.1.4 Equivalent Power Sources 290
6.7.1.5 Other Component Models 291
6.7.2 PSCAD Simulation for UHVDCTSystems 292
## Contents

6.7.2.1 Construction of UHVDC Control Systems 292  
6.7.2.2 Simulated System Parameter Settings 292  

7  
**Entity Dynamic Simulation of Overvoltages on Transmission Lines** 301  
7.1 Overview 301  
7.2 Modeling Methods for Transmission Line Lightning Channels 301  
7.2.1 Structure of Dynamic Simulation Testbed 303  
7.2.2 Structural Diagram 307  
7.2.3 Definitions of Parameters 308  
7.3 Verification of Simulated Transmission Line Lightning Channels 310  
7.4 Dynamic Simulation Testing System 314  
7.4.1 System Composition 314  
7.4.2 Main Technical Indicators 315  
7.4.3 Lightning Types 316  
7.4.4 Lightning Signal Acquisition of Dynamic Simulation Testbeds 316  
7.4.5 Significance of Modeling 317  

8  
**Overvoltage Pattern Recognition in Power Systems** 319  
8.1 Selection of Characteristic Values 319  
8.2 Time-Domain Characteristic Extraction 320  
8.3 Wavelet Transform Analysis 322  
8.3.1 Basic Theory 322  
8.3.2 Characteristic Extraction Based on Wavelet Decomposition 323  
8.3.2.1 Selection of Decomposition Scales 323  
8.3.2.2 Case Study of Decomposition 324  
8.4 Singular Value Decomposition (SVD) Theory 327  
8.5 Characteristic Value Selection for Sorters 329  
8.5.1 Characteristic Value Selection for First-Level Sorters 329  
8.5.2 Characteristic Value Selection for Second-Level Sorters 330  
8.6 SVM-Based Transient Overvoltage Recognition System 331  
8.6.1 Overview of Support Vector Machine (SVM) 331  
8.6.2 Multi-Class SVM 333  
8.7 Data Preprocessing 334  
8.7.1 Dimension Reduction 334  
8.7.2 Normalization 335  
8.8 Parameter Selection and Optimization 336  
8.8.1 Cross Validation 336  
8.8.2 Genetic Algorithm 337  
8.8.3 Particle Swarm Optimization Algorithm 337  
8.9 Extraction and Modification of Field Waveform Parameters 342  
8.9.1 Innovative Extraction Methods for Practical Lightning Parameters 342  
8.9.2 Modification of Practical Lightning Impulse Test Parameters 344  

**Bibliography** 347  

**Index** 351
