panoramic radiographic examination, 130
periodontal examination, 129
postoperative instructions, 132
sequence of selected treatment plan, 130, 131
diagnostic features of, 129
improvements in oral function, 129
oral bacterial flora in afflicted individuals, 129
oral manifestations of, 129
oral rehabilitation, 129
oral rehabilitation of patients, 129
pathognomonic dental features of, 129
treatment included maxillary and mandibular fixed
prostheses, 129
use of implants in patients with, 129
partial group function
occlusal scheme, 48
partially edentulous patients, 148
clinical report, 149–152
convexity of facial profile improved, 150
correction of crossbite and rehabilitation in maxillary anterior
region, 152
distalization of the anterior teeth, 149
mandibular implants, for rehabilitation, 151
maxillary implants, 150
molars made upright, 149
orthodontic alignment and leveling, 149
posterior part of the prosthesis, 149
posttreatment panoramic radiograph, 150
radiographic examination, 149
treatment aimed at, 149
zygomatic implants, 151
partial prosthesis, 149
pathologic wear, 53
patient-related survival, 259
percutaneous endoscopic gastronomy (PEG), 188
