About the Authors xxi
List of Abbreviations xxiii

1 Introduction 1
1.1 Outline of the Book 1
1.2 Basics of Power Processing 4
   1.2.1 AC-DC Conversion 4
   1.2.2 DC-DC Conversion 14
   1.2.3 DC-AC Conversion 18
   1.2.4 AC-AC Conversion 21
1.3 Hardware Issues 24
   1.3.1 Isolation 25
   1.3.2 Power Stages 26
   1.3.3 Output Filters 33
   1.3.4 Voltage and Current Sensing 35
   1.3.5 Signal Conditioning 36
   1.3.6 Protection 38
   1.3.7 Central Controller 38
   1.3.8 Test Equipment 42
1.4 Wind Power Systems 44
   1.4.1 Basics of Wind Power Generation 44
   1.4.2 Wind Turbines 45
   1.4.3 Generators and Topologies 48
   1.4.4 Control of Wind Power Systems 51
1.5 Solar Power Systems 53
   1.5.1 Introduction to Solar Power 53
   1.5.2 Processing of Solar Power 54
1.6 Smart Grid Integration 55
   1.6.1 Operation Paradigms of Power Systems 55
   1.6.2 Introduction to Smart Grids 56
   1.6.3 Requirements for Smart Grid Integration 59
## Preliminaries

2.1 Power Quality Issues  
2.1.1 Introduction  
2.1.2 Degradation Mechanisms of Voltage Quality  
2.1.3 Role of Inverter Output Impedance  
2.2 Repetitive Control  
2.2.1 Basic Principles  
2.2.2 Poles of the Internal Model \( M(s) \)  
2.2.3 Selection of the Delay in the Internal Model  
2.3 Reference Frames  
2.3.1 Natural (abc) Frame  
2.3.2 Stationary Reference (αβ) Frame  
2.3.3 Synchronously Rotating Reference (dq) Frame  
2.3.4 The Case with Phase Sequence acb

## PART I  POWER QUALITY CONTROL

3  Current \( H^\infty \) Repetitive Control  
3.1 System Description  
3.2 Controller Design  
3.2.1 State-space Model of the Control Plant \( P \)  
3.2.2 Formulation of the Standard \( H^\infty \) Problem  
3.2.3 Evaluation of the System Stability  
3.3 Design Example  
3.4 Experimental Results  
3.4.1 Synchronisation Process  
3.4.2 Steady-state Performance  
3.4.3 Transient Response (without a Load)  
3.5 Summary

4  Voltage and Current \( H^\infty \) Repetitive Control  
4.1 System Description  
4.2 Modelling of an Inverter  
4.3 Controller Design  
4.3.1 Formulation of the \( H^\infty \) Control Problem  
4.3.2 Realisation of the Generalised Plant  
4.3.3 State-space Realisation of \( T_{ew} \)  
4.3.4 State-space Realisation of \( T_{ba} \)  
4.4 Design Example  
4.5 Simulation Results  
4.5.1 Nominal Responses  
4.5.2 Response to Load Changes  
4.5.3 Response to Grid Distortions  
4.6 Summary

## Contents

11.2.1 Design of the Current Controller $K_i$ 196
11.2.2 Design of the Voltage Controller $K_v$ 196

11.3 Performance Evaluation 199

11.4 Selection of the Components
11.4.1 Capacitor $C_N$ 201
11.4.2 Inductor $L_N$ 201

11.5 Simulation Results
11.5.1 With $i_N = 0$ 202
11.5.2 With a 50 Hz Neutral Current 203
11.5.3 With a 150 Hz Neutral Current 204
11.5.4 With a DC Neutral Current 205

11.6 Summary 205

12 $H^\infty$ Voltage-Current Control of a Neutral Leg 207

12.1 Mathematical Modelling 207
12.2 Controller Design
12.2.1 State-space Realisation of $P$ 211
12.2.2 State-space Realisation of the Closed-loop Transfer Function 213

12.3 Selection of Weighting Functions 214
12.4 Design Example 215
12.5 Simulation Results 216
12.6 Summary 217

13 Parallel PI Voltage-$H^\infty$ Current Control of a Neutral Leg 219

13.1 Description of the Neutral Leg 219
13.2 Design of an $H^\infty$ Current Controller
13.2.1 Controller Description 221
13.2.2 Formulation as a Standard $H^\infty$ Problem 221
13.2.3 State-space Realisation of the Plant $P$ 222
13.2.4 State-space Realisation of the Generalised Plant $\tilde{P}$ 223
13.2.5 Design Example 224

13.3 Addition of a Voltage Control Loop 226
13.4 Experimental Results
13.4.1 Steady-state Performance 227
13.4.2 Transient Response to Changes in the Neutral Current 230

13.5 Summary 230

14 Applications in Single-phase to Three-phase Conversion 233

14.1 Introduction 233
14.2 The Topology under Consideration 236
14.3 Basic Analysis 237
14.4 Controller Design
14.4.1 Synchronisation Unit 239
14.4.2 Control of the Rectifier Leg 241
14.4.3 Control of the Neutral Leg 241
14.4.4 Control of the Phase Legs 242
PART III  POWER FLOW CONTROL

15  Current Proportional–Integral Control  251
15.1  Control Structure  251
   15.1.1  In the Synchronously Rotating Reference (dq) Frame  251
   15.1.2  Equivalent Structure in the Natural (abc) Frame  253
15.2  Controller Implementation  254
15.3  Experimental Results  254
   15.3.1  Steady-state Performance  254
   15.3.2  Transient Performance  257
15.4  Summary  258

16  Current Proportional-Resonant Control  259
16.1  Proportional-resonant Controller  259
16.2  Control Structure  260
   16.2.1  In the Stationary Reference (αβ) Frame  260
   16.2.2  Equivalent Controller in the abc Frame  261
16.3  Controller Design  261
   16.3.1  Model of the Plant  261
   16.3.2  Design Example  262
16.4  Experimental Results  263
   16.4.1  Steady-state Performance  263
   16.4.2  Transient Performance  266
16.5  Summary  268

17  Current Deadbeat Predictive Control  269
17.1  Control Structure  269
17.2  Controller Design  269
17.3  Experimental Results  271
   17.3.1  Steady-state Performance  272
   17.3.2  Transient Performance  275
17.4  Summary  275

18  Synchronverters: Grid-friendly Inverters that Mimic
    Synchronous Generators  277
18.1  Mathematical Model of Synchronous Generators  278
   18.1.1  Electrical Part  278
   18.1.2  Mechanical Part  280
   18.1.3  Presence of a Neutral Line  281
## Contents

18.2 Implementation of a Synchronverter 282
  18.2.1 Power Part 282
  18.2.2 Electronic Part 283

18.3 Operation of a Synchronverter 284
  18.3.1 Regulation of Real Power and Frequency Droop Control 284
  18.3.2 Regulation of Reactive Power and Voltage Droop Control 286

18.4 Simulation Results 287
  18.4.1 Under Different Grid Frequencies 288
  18.4.2 Under Different Load Conditions 288

18.5 Experimental Results 290
  18.5.1 Performance of Power Flow Control 290
  18.5.2 Loading Performance in the Stand-alone Mode 291
  18.5.3 Loading Performance in the Grid-connected Mode 294

18.6 Summary 296

19 Parallel Operation of Inverters 297
  19.1 Introduction 297
  19.2 Problem Description 299
  19.3 Power Delivered to a Voltage Source 300
  19.4 Conventional Droop Control 301
    19.4.1 For R-inverters 301
    19.4.2 For L-inverters 302
    19.4.3 For C-inverters 303
    19.4.4 Experimental Results with R-inverters 304
  19.5 Inherent Limitations of Conventional Droop Control 304
    19.5.1 Real Power Sharing 307
    19.5.2 Reactive Power Sharing 308
  19.6 Robust Droop Control of R-inverters 309
    19.6.1 Control Strategy 309
    19.6.2 Error Due to Inaccurate Voltage Measurements 311
    19.6.3 Voltage Regulation 311
    19.6.4 Error Due to the Global Settings for \( E^* \) and \( \omega^* \) 312
    19.6.5 Experimental Results 313
  19.7 Robust Droop Control of C-inverters 319
    19.7.1 Control Strategy 319
    19.7.2 Simulation Results 320
    19.7.3 Experimental Results 321
  19.8 Robust Droop Control of L-inverters 326
    19.8.1 Control Strategy 326
    19.8.2 Simulation Results 327
    19.8.3 Experimental Results 330
  19.9 Summary 330

20 Robust Droop Control with Improved Voltage Quality 335
  20.1 Control Strategy 335
  20.2 Experimental Results 337
## Contents

20.2.1  1:1 Power Sharing 337
20.2.2  2:1 Power Sharing 340
20.3  Summary 346

21  Harmonic Droop Controller to Improve Voltage Quality 347
21.1  Model of an Inverter System 347
21.2  Power Delivered to a Current Source 349
21.3  Reduction of Harmonics in the Output Voltage 351
21.4  Simulation Results 353
21.5  Experimental Results 355
21.6  Summary 358

PART IV  SYNCHRONISATION

22  Conventional Synchronisation Techniques 361
22.1  Introduction 361
22.2  Zero-crossing Method 362
22.3  Basic Phase-locked Loops (PLL) 363
22.4  PLL in the Synchronously Rotating Reference Frame (SRF-PLL) 364
22.5  Second-order Generalised Integrator-based PLL (SOGI-PLL) 366
22.6  Sinusoidal Tracking Algorithm (STA) 368
22.7  Simulation Results with SOGI-PLL and STA 369
   22.7.1  With a Noisy Distorted Signal having a Variable Frequency 369
   22.7.2  With a Noisy Distorted Square Wave 372
22.8  Experimental Results with SOGI-PLL and STA 372
   22.8.1  With a Voltage Taken from the Grid 372
   22.8.2  With a Noisy Distorted Signal having a Variable Frequency 375
   22.8.3  With a Noisy Distorted Square Wave 375
22.9  Summary 378

23  Sinusoid-locked Loops 379
23.1  Single-phase Synchronous Machine (SSM) Connected to the Grid 379
23.2  Structure of a Sinusoid-locked Loop (SLL) 380
23.3  Tracking of the Frequency and the Phase 382
23.4  Tracking of the Voltage Amplitude 382
23.5  Tuning of the Parameters 382
23.6  Equivalent Structure 383
23.7  Simulation Results 384
   23.7.1  With a Noisy Distorted Signal having a Variable Frequency 384
   23.7.2  With a Noisy Distorted Square Wave 386
23.8  Experimental Results 386
   23.8.1  With a Voltage Taken from the Grid 386
