Progestins, 147, 151
Progressively motile sperm (PMS), 409
calculation, 410–411
Prolactin, 147
Propidium iodide/SYBR-14, 476–477
Prostaglandin E₁ (PGE₁), 153
Prostaglandin E₂ (PGE₂), 100–101, 153
Prostaglandins E₂, 152–153
Prostate gland, 466–467
Pulsed wave Doppler, 208
qPCR assay for infectious endometritis diagnostics, 53–57
and DNA sequencing, 54–55
interpretation of qPCR data, 55
real-time quantitative PCR (qPCR) assay, 53
sample collection technique, 54
Radial immunodiffusion (RID) assay, 293
Radiographic examination of penis, 471–472
urethral evaluation, 471
Real-time quantitative PCR (qPCR) assay, 53
Red blood cells in uterine cytology, 63
Reinforcement breeding, 119–120
Relaxin, 237–238
Restraint for breeding, 109–111
Resuscitation, See also birth resuscitation
Retained placenta removal, 309–311
Retained placenta
diagnosis, 305–307
Retrograde oviductal flush technique, 97–98
Rhodamine 123 (R123), 486–487
Roanoke artificial vagina, 336–339
Round cells assessment in semen, 392–393
Routine care, of foal, 521–526
A-B-C guidelines, 521–522
antibiotics, 525
colostrum, nursing and ingestion of, 523
foal enema, 524
meconium, 523–525
passive transfer of antibodies, transfer, 525
plasma therapy, 525
1-2-3 Rule, 525
umbilical care, 522–523
Sabouraud agar for fungal culture, 47
Seasonal anestrus management, 144–145
artificial photoperiod, 144–145
hormone therapy, 146–148
Semen evaluation, 322–323
gross evaluation of semen quality, 323
concentration, 323
morphology, 323
motility, 323
pH, 323
volume, 323
Semen extenders, 406–408
extender components, 406–407
antimicrobial agents, 406–407
semen plasma, 407
skim milk glucose extender, 407
Semen freezing, 436–440
lactose-EDTA extender, 438–439
skim milk/egg yolk extender, 439
technique for freezing straws of extended semen, 438–439
technique for loading straws with extended semen, 436–438
thawing frozen semen, 441–443
Semen packing for cooled transport, 412–418
disposable shipper, 417–418
Equitainer® freezer, 414–416
heat-sealed bag, 413
insulated isothermalizer cup, 415
Whirl-Pak®, 413
Semen preparation for cooled transport, 409–411
progressively motile spermatozoa calculation, 410–411
total spermatozoa calculation, 410
Semen smearing technique for morphology, 374–375
Semen staining technique for morphology, 373–374
Semen tank, See also Long-term frozen semen storage tank
Seminal plasma, 407, 456–457
Sexual behavior evaluation of stallion, 354–356
behavior training, 355–356
stimuli, 355
Silent estrus, 8
Single layer colloid centrifugation technique, 433–435
Single radial immunodiffusion test, 515
Skim milk glucose semen extender, 407
Snare cyst removal, 75
Sodium/potassium testing of milk, 252
Spectrophotometer
for sperm concentration evaluation, 357–358
Densimeter model 590a, 358
minitube photometer, 358
model 590B equine densimeter, 358
model 591B equine densimeter, 358
technique for using, 358–359
Speculum examination
of pregnant mare, 193–194
of vagina, 35–37
glass vaginal speculum, 35
tri-valve Polansky (Caslick) speculum, 36
Sperm acrosomal status assessment, 483–485
Sperm chromatin structure assay (SCSA), 478–480
Sperm concentration
evaluation, calibrated spectrophotometer for, 357–359
hemocytometer evaluation of, 360–362
NucleoCounter® evaluation of, 363–365
total cell count, 364
viability count, 364–365
Sperm media, 407–408
sperm medium (SMED), 408
sperm-TALP, 407–408
Sperm mitochondrial function assessment, 486–487
sperm abnormalities classification, 378, See also Abnormal sperm morphology
Sperm motility, visual evaluation of, 366–367
progressive motility, 367
total motility, 367
Sperm plasma membrane, 476–477
integrity and viability assessment, 476–477
Sperm viability count, 365
Spermatic cord, 461–465
Spermatozoa assessment, 393
Split needle biopsy of testis, 473–474
Standing semen collection, 344–346
Starch granule test, for oviductal patency evaluation, 93–94
Stock solutions, 476–477, 484, 486–487
SucroMate™, 149
Sulpiride, 287
Swab, uterine culture collection, 41–43
Tail defects of sperm, 380–382
Tail rope placement, 14–16
technique for using elastic cord, 15–16
tying a tail rope, technique for, 14–15
Tail wrap of perineum, 9–13
Teaser stallions, 342–343
Teasing, 6–8
behavioral responses, 7–8
group teasing, 7
individual teasing, 6–7
Teat cannula technique for abdominocentesis, 312–313
Testes, harvesting and shipping, 453–454
Testicular biopsy and aspiration, 473–475
technique for a split needle biopsy, 473–474
technique for incisional (wedge) biopsy, 473–474
technique for fine needle aspiration, 474–475
Testicular size measurement, 386–388
Tests, palpation and ultrasonography of, 461–465
Testosterone in pregnant mares, 237–238
Thawing frozen semen, 441–443
Total sperm cell count, 364
Total spermatozoa calculation, 410
Transabdominal fetal cardiac puncture, 226–228
Transvaginal aspiration, twin reduction, 219–221
Transvaginal ultrasound technique, 95–96
Tri-valve Polansky (Caslick) speculum, 36
Tru-Cut® biopsy instrument, 474
Tryptic soy agar (TSA) for microbial culture, 47, 51
Turbidimetric immunoassay, 517
Twin reduction
cranio-cervical dislocation, 222–225
manual technique, 216–218
transabdominal fetal cardiac puncture, 226–228
transvaginal aspiration, 219–221
Ultrasonography
of the stallion, 463–470
per rectum, 4
Ultrasound determination of fetal sex, 195–200
after 150 days of gestation, 199–200
