Index

Note: Page numbers in bold refer to illustrations

A
Abscess, considerations with, 73–74
Adhesive primary molar tooth restoration, 30–34
   - Class I restorations, 33
   - Class II restorations, 33
   - Class V restorations, 33
   - compomers, 33
   - holes and slit placement for rubber dam, 30, 31
   - pit and fissure sealants, 30
   - resin-based composites (RBCs), 30–33
   - resin-modified glass ionomer restorative cements, 33–34
Adper Prompt L-Pop (3M-ESPE), 78
Age-appropriate expectations, in behavior guidance, 173–175
   - modeling, 174, 175
   - preschool-age children, 174
   - school-age child, 174
   - toddlers, 173
Alternative/atraumatic restorative technique (ART), 1
Apexification, 147–151
   - Apical barrier technique with MTA, 151–153
   - Apical plug, 147–151
   - with MTA, 151–152, 151–152
Appliance fabrication, banding and impression for, 139–140
Articaine, 6–7

B
Band and loop, 136–137, 135–136
   - after appliance delivery, 141–142
   - with first permanent molar banded and loop extending
distally to mesial of partially erupted first permanent molar, 137
distally to mesial of the first permanent molar, 136, 136
mesially to distal of the first primary molar, 136, 136
for premature loss of mandibular first primary molar, 135, 135
   - maxillary first primary molar, 135, 135
   - removing band, 141
Behavior guidance, 173–182
   - age-appropriate expectations, 173–176
   - child on parent’s lap for examination, 173, 174
   - eye protection, 178–179
   - guidance techniques, 177–178
   - isolation for restorative procedures, 179
   - knee-to-knee examination, 173, 174
   - mouth props, 126–177
   - parent/guardian presence, 180–182
   - radiographs, 179–180
Biodentine (Septodont), 55
Black copper cement, 29
Bluegrass to correct finger/thumb sucking, 167, 168
Bovie gauge, 129
   - to measure mesial–distal width, 41, 41
Bonded resin composite strip crown, 14, 15
Bonding agent, 78–79
Brass wire technique, 109–114
   - bitewing radiograph, 109, 110
   - brass wire placement, 110–112
   - elasomer placement, 111
   - initial attempt to place a 0.028-in. wire, 113
   - local anesthesia, 110
   - separators, 112–113
   - wire removal, 113–114
   - wire tightening, 113
Breathe-Right Nasal Strip, 179
Bruxing, 169–171
Bupivacaine, 6

C
Calcium hydroxide (Ca(OH)$_2$), 85–86, 93–94
Canine interference, 164, 166
Caries detection, 77–78
Caries removal and crown placement, 17–19, 18
   - curing, 17–19
   - finishing, 17–19
Cementation, 20, 48–50
   - stainless steel crown, 91–92
Cervical caries, 1, 2
Chairside fabrication, 140–141
Cheng Crowns, 19
Chromium alloy deciduous crowns, 29
Clindamycin, 153
Compomers, 33
Congenitally missing permanent successor, 129–131
Copper amalgam, 29
Crib to correct finger/thumb sucking, 164, 167, 168
Curette, in extraction of primary dentition, 71, 71
Cvek pulpotomy, 143, 147–150
Dental age, 133
DentalVibe™ device, 10–11, 10–11
to augment topical anesthetic, 11
for buccal infiltration, 11
for palatal injection, 11
Dicalcium silicate, 96
Direct pulp capping, 143
Direct pulp therapy (DPT) for young permanent molars, 93–98
complications, 98
diagnosis, 95
follow-up, 98
indications for, 95
medicament, 95–96
MTA direct pulp cap, 94
permanent tooth pulp capping, 94
permanent tooth pulpotomy, 94–95
Portland cement, 96
success criteria, 98
success rate, 98
technique, 96–98
Caries excavation, 96
rubber dam placement, 96
sodium hypochlorite irrigation, 96, 97
Distal shoe, 138–139, 139
Distal tipping techniques, 114–117
Dri-angles, 1–3, 78
Dycal, 85–86, 85, 89
E
early childhood caries (ECC), 13–28, 25–27, see also Anterior esthetic fixed appliances
appliance design, 24
bonded resin composite strip crown, 14, 15
caries removal and crown placement, 17–19
curing, 17–19
finishing, 17–19
clinical procedure, 24
elastomer method, 16
full coverage prefabricated crowns, 19–20
indications, 13–14
inflamed gingiva, 13, 14
isolation, 14–17
oral hygiene, 13
pretreatment, 13
routine use of ligature, 15, 16
rubber dam placement, 14–17
steps in fabrication, 24–27
first appointment, 24
second appointment, 24–27
strip crown preparation, 14, 15
timing of placement, 27
Ectopic eruption (EE) of maxillary first permanent molar, 107–119,
see also Brass wire technique
adjacent maxillary second primary molar, disking of, 114–118
black chain elastic removed, 117
distal tipping techniques, 114–117
ectopic spring-loaded distalizer appliance, 114, 117
elastomer separators, 108–109
identification, 108
observation, 108
removable appliance, 119
treatment modalities, 107
distal tipping, 107
interproximal wedging, 107
Ectopic eruption of maxillary permanent canines, 121–124
intervention, 121–124, 121–124
overretained maxillary right primary canine, 123
Ectopic spring-loaded distalizer appliance, 114, 117
Elastomer separators, 108–109
jumbo separators, 108
Enamel hypomineralization, 99
Enameloplasty, 79, 80
EndoFlas®, 63
EndoFlas F.S., 64
Epinephrine, 7
Esthetic crowns, 43–50, see also Preveneered stainless steel crowns;
Zirconia crowns
CRIMPING WITH PLIERS, 43
preveneered SSCs, 43
procedure for, 43–46
shades of, 43, 44
Etching/primer, 78
Extraction of primary dentition, 71–76
abscess, considerations with, 73–74
after extraction, 74–76
169L carbide bur to split primary molar from buccal to lingual, 72, 75
curette, 71, 71
injection
in distal papilla, 72, 73
in mesial papilla, 72, 73
into sulcus, 72, 73
luxation, 71–72, 72
straight forceps for primary incisors, 72, 74
Eye protection, 178–179
EZ Pedo, 19
F
Facial caries, 1, 2
Ferric sulfate, 55
Filler resorbability, 63–65
Finger/thumb sucking, 164–167
Bluegrass to correct, 167, 168
canine interference, 164, 166
Crib to correct, 167, 168
first-phase orthodontic treatment, 164
First primary molar, 135
Fleck’s Red Copper Cement, 29
Fluoride affecting oral bacteria in vivo, 85–86
Formocresol, 55–56
Frankl behavioral rating scale, 181–182
Full coverage prefabricated crowns, 19–20
Full coverage restoration for primary molars, 39–50, see also Esthetic crowns; Stainless steel crowns (SSCs)
G
Glass ionomer (GI), 85–86, 102
cements, 91
temporary restoration, 83
Groper appliance, 24, 25
Index

Guidance techniques, 177–178
  audio-visual distraction, 178, 178
  auditory distraction, 178, 178
  minute timer for distraction, 177, 177
  mirror for distraction, 177, 177
  palm pressure to reduce anxiety, 177, 178
  reframing to change mindset, 179
  rubbing palms together to reduce anxiety, 177, 178
  soft rubber ball squeezing for mild anxiety, 178, 178
  fleshy area between index finger and thumb squeezing to reduce anxiety, 178, 178

H

  Habit therapy, 164
  Hall technique, 43
  Halterman appliance, 114, 116–117
  Hay-rake for tongue thrust, 169, 169
  Hollenback carver, 16
  Howe plier to reduce mesial–distal size, 41, 43

Hypomineralization, 99–105, See also Molar–incisor hypomineralization (MIH)

I

  Indirect pulp therapy (IPT), for young permanent molars, 83–92
    amalgam, 90
    caries excavation, 87
    composite, 90
    criteria for success, 90
    diagnosis, 84
    final restoration, 88, 90
    fluoride affecting oral bacteria in vivo, 85–86
    follow-up, 90
    indicated for teeth with reversible pulpitis signs, 84–85
    medicaments, 85
      calcium hydroxide (Dycal), 85
      glass ionomer (Vitrebond), 85
    permanent stainless steel crown, 91
    rubber dam placement, 87
    success rate, 90
    two-step (stepwise) method, 83
    Vitrebond placement over remaining caries, 88

  Inferior alveolar nerve block anesthesia, 8–9, 9

  Injection
    in distal papilla, 72, 73
    injection discomfort, 7–8
    in mesial papilla, 72, 73
    into sulcus, 72, 73

  Interim therapeutic restoration (ITR), 1–3
    in primary dentition, 1–3
    cervical caries, 1, 2
    dri-angles, 1–3, 3
    facial caries, 1, 2
    indications, 1
    materials, 2–3
    mesial caries, 1, 2
    occlusal caries, 1, 2
    procedure, 1–2
    superficial caries, 1, 2

  Intermediate restorative material (IRM), 55–56, 56–57
  Intermediate Restorative Material (IRM), 65
  Iodoform-based paste (KRI), 63
  Isodyne® isolation techniques, 65
  Isolation for restorative procedures, 179
  Isolite, 78, 78, 179

K

  Kinder Krowns, 19
  Kri paste, 63, 65
  Kryptex, 29

L

  Lidocaine, 6–7
  Light curing, 80, 80
  Local anesthesia for the pediatric patient, 5–11
    articaine, 6
    bupivacaine, 6
    choice of anesthesia, 6–7
    DentalVibe™ device, 10
    describing to child, 5
    ecchymosis due to lip chewing, 6
    lip swelling due to lip chewing, 6
    rash due to anxiety, 6
    rash due to suspected allergy, 6
    distraction, 10–11, 10
    27-gauge long needle, 8, 8
    27-gauge short needle, 8, 8
    inferior alveolar nerve block, 8–9, 9
    injection discomfort, 7–8
    lidocaine, 6
    mepivacaine, 6
    prilocaine, 6
    topical anesthetic placement for long buccal injection, 8
    in vital pulp therapy, 51
  Lower lingual holding arch/passive lingual arch, 138
  Luxation, in extraction of primary dentition, 71–72, 72

M

  Mandibular pedo partials for premature loss of primary incisors, 135, 135
  Mandibular primary molars, infraocclusion of, 127–131, See also individual entry
  Maxillary first permanent molar, ectopic eruption of, 107–119, See also Ectopic eruption (EE)
  Maxillary pedo partials for premature loss of primary incisors, 135, 135
  Maxillary permanent canines, ectopic eruption of, 121–124, See also individual entry
  McKeon mouth props, 176, 177
  Mepivacaine, 6–7
  Mesial caries, 1, 2
  Mineral trioxide aggregate (MTA), 55, 93–96, 143, 147–151
    apical barrier technique with, 151–153
    apical plug with, 151, 154
    healing of a gross overfill of, 153
    loading amalgam carrier with, 97
    MTA direct pulp cap, 94
    Mixed dentition typodont, 134
  Modeling, 174, 175
  Moisture control, 78
  Molar–incisor hypomineralization (MIH), 99–105
    diagnosis, 99–105
Molar–incisor hypomineralization (MIH) (continued)
eiology, 99–100
management of, 101, 102
icisors, 102
molars, 102
prevalence, 99–100
severity score of teeth affected with, 101, 102
caries, 101
crown appearance, 101
enamel loss, 101
esthetics, 101
sensitivity, 101
treatment of, 99–105

Molt mouth prop, 176, 177
Molt mouth prop, 176, 177

Open Wide Disposable Mouth Rest, 176
Parkell dry-field posterior mouth prop, 176, 177
toothbrush with rubber handle for mouth prop, 176

N
Nance appliance, 138, 138
Nance holding arch, 24, 24
Nano-ionomer, 34
Non-nutritive sucking, 163–171, See also Finger/thumb sucking
NuSmile ZR crowns, 19, 21–22

O
Occlusal caries, 1, 2, 34
Open Wide Disposable Mouth Rest, 176
Oral hygiene, 13
Orthodontic elastomeric ligatures, 16

P
Pacifier habits, 163–164
Pain evaluation in pulpectomy, 59–60
Parafunctional habits, 163–171, See also Finger/thumb sucking
bruxing, 169–171
pacifier habits, 163–164
tongue thrust, 167–169
Parent/guardian presence, 180–181
Parkell dry-field mouth prop, 78, 78, 158, 158
Parkell dry-field mouth prop, 78, 78
Parkell dry-field mouth prop, 78, 158, 158
Parkell dry-field mouth prop, 176
posterior, 176, 176
Partially erupted teeth, 79
Periodontal ligament (PDL), 127
Permanent incisor enamel fragments, reattachment of, 157–160
to mandibular central incisor, 159, 159
Parkell dry-field mouth prop, 157, 158
phosphoric acid in, 158–159
procedure, 157–160
pulp capping, 157
Permanent stainless steel crown, 91
Permanent successor, 127–129, 128
root development of, 133
Permanent tooth pulp capping, 94
Permanent tooth pulpotomy, 94–95

Pit and fissure sealants, 30
‘Plastic’ filling materials, 29
Portland cement, 95
Preformed anterior crowns (PACs), 19
cementation, 20
crown reduction, 19
crown size, 19
subgingival reduction, 20, 23
try-in, 20
Preveneered stainless steel crowns, 43
coarse football diamond bur for 2-mm occlusal reduction, 44, 45
coarse tapered round end diamond bur for buccal and lingual reduction, 44, 45
donut diamond bur for 2-mm occlusal reduction, 44, 45
donut diamond bur to check depth of occlusal reduction, 44, 45
fine tapered diamond bur for mesial and distal reduction, 44, 45
fine tapered round end diamond bur, 44, 45
preveneered versus zirconia, 50
size selection, 44–45
Prilocaine, 6–7
Primary dentition, 1–3
extraction of, 71–76, See also Extraction of primary dentition
ITR in, 1–3
Primary incisors, 134–135
restoration, 13–28, See also Early childhood caries (ECC)
Primary molar adhesive tooth restoration, 29–36, See also Adhesive primary molar tooth restoration
ideal operative field, 29–30
rubber dam isolation, 29–30
Primary molars, 51–57
full coverage restoration for, 39–50
vital pulp therapy for, 51–57, See also individual entry
Pulp capping, 143–147, 157
direct pulp capping, 143
Pulp necrosis, 98
Pulp tests, 61–62
Pulp Therapy Guideline, 59
Pulpal bleeding, 62
Pulpal treatment in young permanent incisors following traumatic injuries, 143–155
apexification and apical plug, 147–151
apexification of right incisor, 144
direct pulp capping, 143
mineral trioxide aggregate (MTA), 143
pulp capping, 143–147
pulpotomy, 143–147
regenerative endodontics, 155
strengthening the root, 153–155
Pulpotomy, 143–147
and SSCs crown model, 52
