## Contents

2.11 Conclusion 32  
References 32  

3 Synchronization 33  
3.1 Introduction 33  
3.2 Application Requirements 35  
3.3 Synchronization Standards 39  
3.4 NTP/SNTP 40  
3.5 Precision Time Protocol (IEEE 1588) 44  
3.6 Synchronous-Ethernet Networks (SyncE) 51  
3.7 Conclusion 61  
References 61  

4 Pseudowires 63  
4.1 Introduction 63  
4.2 Protocol Layers 63  
4.3 Payload Types 64  
4.4 Pseudowire Architecture 65  
4.5 Control Plane 72  
4.6 Multisegment Architecture 74  
4.7 Multisegment Pseudowire Setup Mechanisms 77  
4.8 Resiliency 80  
4.9 Quality of Service and Congestion Control 80  
4.10 Operations and Maintenance (OAM) 81  
4.11 Security 83  
4.12 Conclusion 84  
References 85  

5 Ethernet Protection 86  
5.1 Introduction 86  
5.2 Automatic Protection Switching (APS) Entities 87  
5.3 Linear Protection 89  
5.4 Ring Protection 97  
5.5 Link Aggregation 102  
5.6 Conclusion 108  
References 108  

6 Carrier Ethernet Architectures and Services 109  
6.1 Introduction 109
6.2 Standards 111
6.3 Architecture 111
6.4 Interfaces 125
6.5 Services 138
6.6 Conclusion 156
References 156

7 Carrier Ethernet Traffic Management 158

7.1 Introduction 158
7.2 Policing 160
7.3 Queuing, Scheduling, and Flow Control 161
7.4 Three CoS Model 161
7.5 SLAs (Service-Level Agreements) 164
7.6 SLAs 168
7.7 Application-CoS-Priority Mapping 168
7.8 Bandwidth Profile 177
7.9 Conclusion 180
References 180

8 Carrier Ethernet OAM&P (Operations, Administration, Management, and Performance) 181

8.1 Introduction 181
8.2 Link OAM 183
8.3 Service OAM 186
8.4 Maintenance Entities 188
8.5 Maintenance Points 190
8.6 OAM Addressing and Frame Format 193
8.7 Continuity Check Message (CCM) 198
8.8 Loopback and Reply Messages (LBM and LBR) 202
8.9 Link Trace and Reply Messages (LTM and LTR) 206
8.10 Ethernet Alarm Indication Signal (ETH-AIS) 210
8.11 Ethernet Remote Defective Indication (ETH-RDI) 213
8.12 Ethernet Locked Signal (ETH-LCK) 214
8.13 Performance Measurements 215
8.14 Performance Monitoring 217
8.15 Loss Measurements 218
8.16 Availability 221
8.17 Frame Delay Measurements 224
8.18 Interframe Delay Variation (IFDV) Measurements 225
8.19 Testing 225
8.20 Security 232
9 Circuit Emulation Services (CES) 234

9.1 Introduction 234
9.2 Circuit Emulation Functions 237
9.3 Adaptation Function Headers 238
9.4 Synchronization 241
9.5 TDM Application Signaling 242
9.6 CESoETH Defects and Alarms 244
9.7 Performance Monitoring of CESoETH 245
9.8 CESoETH Service Configuration 245
9.9 Conclusion 246
References 246

10 Carrier Ethernet Local Management Interface 247

10.1 Introduction 247
10.2 ELMI Messages 250
10.3 ELMI Message Elements 252
10.4 ELMI System Parameters and Procedures 257
10.5 UNI-C AND N Procedures 260
10.6 Conclusion 261
References 261

11 PB (Provider Bridges), PBB (Provider Backbone Bridges), and PBT (Provider Backbone Transport) 262

11.1 Introduction 262
11.2 IEEE 802.1AB 264
11.3 Provider Backbone Bridges (PBB) 270
11.4 PBT (Provider Backbone Transport) 278
11.5 Conclusion 287
References 287

12 T-MPLS (Transport MPLS) 288

12.1 Introduction 288
12.2 Differences from MPLS 290
12.3 Architecture 291
12.4 T-MPLS Frame Structure 294
12.5 T-MPLS Networks  296
12.6 Conclusion  301
References  302

13 MPLS-TP (MPLS-Transport Profile)  303

13.1 Introduction  303
13.2 Frame Format  306
13.3 Architecture  307
13.4 OAM (Operations, Administration, and Maintenance)  320
13.5 Protection Switching  330
13.6 Security Considerations  331
13.7 Conclusion  331
References  331

14 Virtual Private LAN Services (VPLS)  333

14.1 Introduction  333
14.2 Data Plane  338
14.3 LDP-Based VPLS  340
14.4 BGP Approach  353
14.5 Security  360
14.6 External Network–Network Interface  360
14.7 Conclusion  360
References  361
