Index

adaptive modulation and coding (AM&C), 1
additive noise, 16
additive white Gaussian noise (AWGN) channel, 5, 20
analogue communication system, 7
analogue modulation, 6
AM, 6
FM, 6, 7
PM, 6, 7
automatic modulation recognition, 2
AWGN channel, 20

back propagation, 88
blind modulation classifier, 97
broadband over power line (BPL), 141
centroid parameter, 103
cycle channel effect, 15–16
cycle estimation, 4
effect expectation maximization, 97–102, 147
effect expectation maximization estimation, 97
minimum centroid estimation, 98
cycle channel gain, 15
cycle state information (CSI), 4
classification accuracy, 5
computational complexity, 35
cycle constellation, 14
continuous wavelet transform (CWT), 71
covariance matrix, 20
cumulant based feature, 74
cumulative distribution function (CDF), 50, 56–8
AWGN channel, 5, 20
cyclic cumulant based feature, 78
cyclic moment based feature, 75
cyclostationary process, 76
cyclic autocorrelation, 75
cyclic domain profile, 77
spectral coherence, 77
spectral correlation function, 77
digital communication system, 11
digital modulation, 6, 8–15
ASK, 8–9, 11
FSK, 8–9, 11
PAM, 11, 13
PSK, 11, 13
QAM, 13, 14
dimension reduction, 81
feature selection, 81
direct sequence spread spectrum (DSSS), 157
discrete signal, 16
distribution based classifier, 63
CvM test classifier, 57
distribution test
Anderson–Darling test, 57–8
Cramer–von Mises test, 57
Kolmogorov–Smirnov test, 50–56

distribution test based classifier
  AD test classifier, 58
  KS test classifier, 50–58, 63
  O DST classifier, 59
  phase difference classifier, 56

electronic support
  electronic attack, 2
  electronic warfare, 1, 2
  electronic attack, 2
  electronic protect, 2
  electronic support, 2

empirical cumulative distribution function (ECDF), 50, 51
expectation maximization (EM), 97
  expectation step, 99
  maximization step, 99
  update function, 100

expectation/condition maximization (ECM), 101

fading channel, 5, 20
  attenuation, 20
  fast fading, 25
  frequency offset, 25, 28
  offset, 25
  phase offset, 15–16, 25, 26
  slow fading, 25

feature based classifier, 19
  cumulant based classifier, 50
  cumulant based feature, 50, 74, 116–20, 123, 124, 128–30
  moment based feature, 74, 75, 117, 123, 124, 128, 129, 132, 134

feature combination
  artificial neural network, 81
  genetic programming, 81, 90–94

feature selection
  genetic algorithm, 62
  genetic programming, 81, 90–94
  logistic regression, 86–7

feature space, 81
Fisher's criterion, 93
fitness, 90
  evaluation, 90
  function, 90

frequency-hopping spread spectrum (FHSS), 157
Gaussian Mixture Model, 28
Gaussian mixture model (GMM), 28

genetic algorithm, 62
  genetic operator
    crossover, 89, 91
    mutation, 89, 90
  goodness of fit, 49

high order modulation, 43
I-Q, 14–15
  in-phase component, 14–15
  quadrature component, 14–15

impulsive noise, 5, 20

jamming, 1, 3

K-means clustering, 99

k-nearest neighbour (KNN), 81
likelihood based classifier, 5, 26
  likelihood ratio test, 40–43
  maximum a posteriori, 144
  maximum likelihood, 35–43, 45, 46
  minimum distance likelihood, 45
  minimum likelihood distance, 102
  non-parametric likelihood, 45

likelihood function (LF), 35, 36
  AWGN channel, 20
  fading channel, 5
  non-Gaussian channel, 20

likelihood ratio test
  average likelihood ratio test, 35
  generalized likelihood ratio test, 35
  hybrid likelihood ratio test, 35

linear kernel, 84
link adaptation (LA), 1, 4
log likelihood function, 99
logistic function, 86–7
logit function, 87
low probability of detection, 154
  DSSS, 157
  FHSS, 157
machine learning, 19
  artificial neural network, 81
  genetic algorithm, 81, 89–90
KNN classifier, 81–3
logistic regression, 86–7
  support vector machine, 81
machine learning based classifier, 81
  KNN classifier, 81
  KNN classifier, 81–3, 86, 94
SVM classifier, 84
membership
  hard membership, 99
  soft membership, 99
modulation accuracy, 5, 20
modulation candidate pool, 4
modulation classification, 1, 2
modulation hypothesis, 35
modulation identification, 2
modulation recognition, 2
moment based feature, 74
multi-layer perceptron (MLP), 87–8
multiple-input and multiple output (MIMO), 6
non-Gaussian channel, 28–31
  Gaussian mixture model, 28
  Middleton’s Class A, 28
  symmetric alpha stable, 28
non-linear kernel, 84–5
  polynomial kernel, 85
non-parametric likelihood function (NPLF), 45
pilot sample, 55
prior probability, 40
probability density function (PDF), 20
pulse shaping, 15–16
Rayleigh distribution, 106
Rayleigh fading channel, 145
Rice distribution, 25
semi-blind classifiers, 97
signal distribution
  AWGN channel, 5, 21–5
  fading channel, 20, 25–7
  non-Gaussian channel, 28–31
signal-to-centroid distance, 103
signal-to-noise ratio (SNR), 16
space-time coding (STC), 144
spatial multiplexing (SM), 144
spectral based feature, 65
surveillance, 1
symbol mapping, 49
Symmetric Alpha Stable (SαS) model, 28
threat analysis, 1
timing error, 16
von Mises distribution, 23
wavelet transform feature, 71–4
