Index

acid, 23, 129
alkane, 8
analysis of formation strength, 146
application, 13, 17–19, 27–29, 56, 57,
59, 81, 90–94, 123, 128–130, 144,
146, 149, 150, 152
aromatics, 8
artificial lift, 122, 144, 159
electrical centrifugal pumps, 123
progressive cavity pumps, 17, 18, 123
asphaltene, 2, 8–9, 20
biodegradation, 10
Bohai Bay, 13, 31, 33, 91, 112, 125,
131, 134, 135, 143–160
capillary force, 32
chemical sand-controlling, 23
chlorite, 2, 33
cohesion failure, 32
cold heavy oil production with sand
(CHOPS), 13, 14, 17, 19, 57,
61–63, 136, 150, 153
colloid, 2, 8, 9, 145, 159
comprehensive economical
evaluation, 145
control and adjustment of production
rate, 131
principles of, 131
techniques of, 131–134
critical flowing velocity, 33, 35, 68,
108–111
analysis of experimental data,
119–122
basic theoretical model, 109
experimental research, 109, 112–119
Darcy law, 11, 60, 67, 78
desanding, 138–142, 145, 149, 160
development technologies
management, 12
application of, 27
development characteristics, 12–13
development prospects, 29
key technologies of, 14–15
limited sand production
management, 16
technical philosophy, 13–14
diagenetic features, 2
distribution characteristics, 1, 46
disturbed zone, 15, 32, 58, 65, 67, 68,
80, 81, 85–88
efficiency of mercury withdrawal, 49

evolution of sand production rate
prediction method, 57
solid–fluid coupling model, 62
stress–strain model, 58
wellsite engineering method, 57
wormhole model, 60

excluding sand production, 13, 15–18, 47, 89, 90
conventional methods, 90
sand production management, 90

factors affecting sand production, 31, 33
fluid viscosity, 35
heterogeneity of formation, 35
production drawdown, 35
rock strength, 33–35
in situ stress, 33–35
tectonic stress, 33, 34
water production, 35

flowing characteristics, 10
flowmeter, 112, 113
fluid properties, 8, 56, 60, 109, 110, 119, 143
foam oil, 18, 20, 21
formation sanding patterns, 144
fractal characteristics, 73

gas bubble, 20, 76
gas cap, 2, 21
gas oil ration, 10, 35
geological characteristics, 1, 89

homogeneous, 49, 97, 115–118

illite, 2, 6, 32, 33
influence of sand production on
permeability, 36
particle size, 36, 37
producing sand gradually, 38
sand production, 36

influence of sand production on
porosity structure, 45
sand production rate, 50

joint, 33
Junggar Basin, 1–3

kaolinite, 2, 32
Kozeny–Poiseuille law, 63

laboratory experiments, 27, 28, 36, 45, 92, 97, 113, 148, 153
limited sand production management, 16
lithology, 2

limited sand production management, 16
loose formation, 23

metal cotton filter media, 91
metal mesh filter media, 91
mobility, 10, 11, 79, 81
multilateral well, 25
multiphase, 66, 119, 127, 128

negative skin, 80
nitrogen, 37, 46
nonlinearly, 36
nonwetting, 46

oil components, 8
open hole, 17, 32
optimization, 15, 17, 122, 131, 145
organic solvents, 50, 129
original gas oil ratio, 10

PCP see progressive cavity pump (PCP)
physical simulation of evaluating sand
control results, 99–107
experimental devices, 100
experimental evaluation index, 102
experimental results, 104
pilot application, 149–150
Poisson ratio, 147

premium screen, 17, 90–92, 96–97, 104, 105, 107
production optimization, 131
productivity index appraisal, 56–88
equivalent wellbore model, 81
improved permeability model, 80–81
model of skin factor, 79–80
solving process, 82–83
progressive cavity pump (PCP), 18, 122–126, 130, 144, 159

quartz, 2, 22, 24, 25, 103, 104, 106
references, 57
relative permeability, 74
reservoir simulation appraisal, 145, 146
sand carrying in wellbore, 108–143, 155–159
calculation of, 155–159
sand control methods
artificial borehole wall, 22
chemical sand controlling, 23
gravel packing, 26
mechanical filters, 23
sand exclusion parameters, 92, 105
gravel packing, 98
sand exclusion precision for premium screens, 96
width of sand production exclusion screens, 92
sand production cases
controlling the bottom hole pressure, 84
required parameters for calculation, 83–84
results of calculation, 84–88
sand production management, 143–160
application of, 150
core technologies of, 144
implementation workflow of, 145
model of, 150
pilot application of, 149
sand production mechanism, 17, 31, 66
chemical failure, 32
mechanical failure, 32
sand production rate prediction, 56–89, 96, 144
solid fluid coupling model, 62–64
stress–strain model, 58–60
wellsite engineering method, 57–58
wormhole model, 60–62
Schlumberger, 27, 146
sedimentary characteristics, 2
selection of well completion, 15, 146, 147
shear failure, 32–34, 147
solid fluid coupling model, 64–79
denudation model, 75–79
erosion model, 68–75
principle of calculation, 64–68
supporting techniques, 122, 127
cleaning up plugging formation, 129
monitoring sand production, 127
production string, 131
sand deposition, 130
well flushing, 130
surface treatment, 108, 134, 138, 144–149
erosion rate of devices, 148
examples of, 138
principles of, 136
of produced sands, 108, 149
requirements of, 134
temperature, 2, 8–10, 22, 23, 28, 113, 127, 133, 134, 138, 142
tensile failure, 32
throat, 7, 8, 38, 46–55, 65
unconsolidated sandstone, 2–8, 10, 12–17, 19–21, 23, 29, 31–33, 35, 36, 55, 56, 64, 66, 83, 89, 99, 108, 143
characteristics of reservoir space, 4–8
diagenetic features of, 2–4
distribution characteristics of, 1
Index 167

geological characteristics of, 1–2
sedimentary characteristics of, 2

viscosity, 8–13, 19, 27, 35, 45, 46, 67, 68, 70, 77, 78, 82–84, 102, 103, 106, 112, 120, 123, 125, 130, 134, 135, 137, 142, 143, 150–152, 155–161
volumetric concentration, 111

well completion, 13–18, 20, 29, 80, 81, 89–107, 144–148, 152
aperture sizes, 94, 154
sand particle size, 97, 105, 135, 144, 147, 148, 154, 155
Xmas tree, 133
Young’s modulus, 147
