## 1 Introduction

1.1 Geological Characteristics of Unconsolidated Heavy Oil Sandstone Reservoirs 1

1.1.1 Distribution Characteristics of Unconsolidated Heavy Oil Sandstone Reservoirs 1

1.1.2 Sedimentary Characteristics of Unconsolidated Sandstone Reservoirs 2

1.1.3 Diagenetic Features of Unconsolidated Sandstone Reservoirs 2

1.1.4 Characteristics of Reservoir Space of Unconsolidated Sandstone Reservoirs 4

1.1.5 Fluid Properties of Unconsolidated Sandstone Reservoirs 8

1.1.6 Flowing Characteristics of Unconsolidated Sandstone Reservoirs 10

1.2 Development Technologies Management of Unconsolidated Sandstone Reservoirs 12

1.2.1 Development Characteristics of Unconsolidated Sandstone Reservoirs 12

1.2.2 Technical Philosophy of Sand Production Management 13

1.2.3 Key Technologies 14

1.2.4 Limited Sand Production Management 16

1.2.5 Measures of Controlling Sand Production 21

1.2.6 Application of Sand Production Management 27

1.2.7 Development Prospects of Unconsolidated Sandstone Reservoirs 29
## 2 Sand Production Mechanism and Changes of Rock Properties Affected by Sand Production

2.1 Sand Production Mechanism and the Factors Affecting Sand Production

2.1.1 Mechanism of Sand Production

2.1.2 Factors Affecting Sand Production

2.2 Changes of Formation Properties due to Sand Production

2.2.1 Experiments Observing Influence of Sand Production on Permeability

2.2.2 Influence of Sand Production on Porosity Structure

## 3 Sand Production Rate Prediction and Productivity Index Appraisal

3.1 Evolvement of Sand Production Rate Prediction Method

3.1.1 Wellsite Engineering Method

3.1.2 Stress-Strain Model

3.1.3 Wormhole Model

3.1.4 Solid–Fluid Coupling Model

3.2 Sand Production Rate Prediction by Using Fluid–Solid Coupling Model

3.2.1 The Principle of Calculation

3.2.2 Erosion Model

3.2.3 Denudation Model

3.3 Productivity Appraisal Methods of Wells Producing with Sands

3.3.1 Model of Skin Factor

3.3.2 Improved Permeability Model

3.3.3 Equivalent Wellbore Model of Sanding Tunnels

3.3.4 Solving Process

3.4 Cases of Increasing Production Rate by Allowing Sand Production

3.4.1 Required Parameters for Calculation

3.4.2 Controlling the Bottom Hole Pressure

3.4.3 Results of Calculation

## 4 Well Completion Approaches of Sanding Management

4.1 Methods of Excluding Sand Production

4.1.1 Conventional Methods of Excluding Sand Production

4.1.2 Methods of Excluding Sand Production of Sand Production Management

4.2 Design of Sand Exclusion Parameters

4.2.1 Designing Aperture Width of Sand Production Exclusion Screens
4.2.2 Designing Methods of Sand Exclusion Precision for Premium Screens 96
4.2.3 Approach of Gravel-packing 98

4.3 Physical Simulation of Evaluating Sand Control Results 99
4.3.1 Experimental Devices 100
4.3.2 Experimental Evaluation Index 102
4.3.3 Evaluation Experiments of Sand Exclusion Precision of Premium Screens 103
4.3.4 Evaluation Experiments of Packing Gravel Sizes 105

5 Sand Carrying in Wellbore and Surface Treatment of Produced Sands 108
5.1 Critical Flowing Velocity of Carrying Sand in Wellbore when Producing with Sands 108
5.1.1 Basic Theoretical Model 109
5.1.2 Experimental Research of Sand Carrying in Wellbore 112
5.1.3 Analysis of Experimental Data and Improvement of Formulas 119
5.2 Techniques of Artificial Lift and Production Optimization When Producing with Sands 122
5.2.1 Artificial Lift and Supporting Techniques 122
5.2.2 Production Optimization 131
5.3 Surface Treatment of Produced Crude with Sand Particles 134
5.3.1 Characteristic of Oilfields in Bohai Bay and Requirements of Treatment 134
5.3.2 Principles of Treatment 136
5.3.3 Examples of Surface Treatment of Fluid with Sands 138

6 Sand Production Management in Heavy Oilfields in Bohai Bay 143
6.1 Core Technologies of Sand Production Management 144
6.1.1 Studies of Formation Sanding Patterns 144
6.1.2 Well Completion and Artificial Lift Techniques 144
6.1.3 Surface Treatment Techniques 144
6.1.4 Comprehensive Economical Evaluation 145
6.2 Implementation Workflow of Sand Production Management 145
6.2.1 Reservoir Simulation Appraisal 145
6.2.2 Analysis of Formation Strength 146
6.2.3 Selection of Well Completion 147
6.2.4 Quantitative Evaluation of the Risk of Sand Production 147
6.2.5 Prediction of Initial Condition of Sand Production 147
6.2.6 Prediction of the Volume of Sand Production 148
6.2.7 Estimation of Sand-Carrying Capacity of Wellbore 148
vi Contents

6.2.8 Evaluation of the Erosion Rate of Devices 148
6.2.9 Surface Treatment Techniques when Producing with Limited Sand Production 149
6.2.10 Pilot Application of Sand Production Management 149

6.3 Application of Sand Production Management in Oilfields of Bohai Bay 150
6.3.1 Introduction of Oilfields 150
6.3.2 Model of Sand Production Management 150
6.3.3 Prediction of Volume of Sand Production 152
6.3.4 Design of Aperture Sizes 154
6.3.5 Calculation of Sand Carrying in Wellbore 155
6.3.6 Artificial Lift and Surface Oily Sands Treatment 159
