Raintree Essix splints 380
RANKL receptors 88
RDC/TMD questionnaire 326, 328
rectangular loops 119–120
recycling
of brackets 191
of stainless steel attachments 180–181
regenerative surgical therapy 281–282
remodelling 86
cycle 42, 43
space 42
removable appliances 105, 197–199
acrylic base plates and activators
197–198
erythematous reaction on the palatal
mucosa 197
soft retainers and trainers 198–199
removable retainers 372, 375
Research Diagnostic Criteria for
Temporomandibular Disorders
(RDC) 23
resin adhesives 179
resin-based materials
hypersensitivity reactions to 196–197
local and systemic toxicity 195–196
resin-bonded bridge placement 295–299
adhesives 295
alloy 295
analysis of stress on the bonded joint
295–298
dentine, surface treatment of 295
enamel, surface treatment of 295
micro-preparation 298–299
resin-bonded splints 305
resin-modified glass ionomer cements (RMGICs) 173, 175
composition, degradation/release 194–195
local and systemic toxicity 195–196
respiratory problems 196
restorations, bonding to 178–179
root resorption 360

skeleton, age-related changes in 42–46

sagittal movement 221–226
sagittal occlusion, Angle classification 25
saliva
chromium in 190, 193
nicking in 190
sandblasting 181
screening, for periodontal disease 262–264
screwdriver 152
sealing 171–173
secondary hyperparathyroidism 45, 94
secondary malocclusions 4, 5, 41, 48, 50, 51, 54
segmented mechanics 112–128
advantages of 112–114
cantilevers 124–127
disadvantages 114–115
loops 115–120
power arms 120–123
tooth movements 123–124
two-vector mechanics 127–128
self-etching primers 171
serum
chromium in 190
nicking in 190
severe periodontitis 303
shearing 297
silane application 181
silicone impression material 176
silicone impressions 344–345
single tooth
correction of 380
gingival recession 234–238
implants 299
sirognathography 312
skeletal anchorage 56, 145–160, 383
immediately loadable 148
orthodontic mechanics 158
prosthodontic implants 146
temporary anchorage devices 146
skeleton, age-related changes in 42–46
slenderizing
adult patient, narrowed pulp chambers 358
advantages of 360–361
aesthetics 361
anthropological justification of 354–355
bilateral dental asymmetries 358
Bolton discrepancies 354, 355
contraindications 360
crowding 355
definition 354
evermal striping 361–362
indications 355–360
influence on dental plaque, caries and periodontal disease 355
instrumentation 362–365
interceptive system for 363
labial 368
lingual 368
low caries index 360
lower incisor extraction 360
macrodontia 358
measuring instruments and gauges 364–365
multiple rotations 360
objectives of 354
oral hygiene 360
over-extended crowns and fillings 358
root resorption 360
special considerations 362
stability 360–361
treatment information and consent to 360
treatment times 360
triangular and ‘barrel’ tooth shapes 355–358
slenderizing chart 360
sliding mechanics 108–112
consistency and inconsistency 110–111
continuous archwires 112
resistance to sliding 108
statically determinate and indeterminate force systems 108–112
SmartClip™ brackets 107, 168, 170
smile 62–63
smoking 15
soft brass wire 182, 183
soft retainers and trainers 198–199
soft tissue
anchorage 136–137
problems 24
somatization 331
space
analysis 26, 302
closure 292, 293
creation of 103, 104, 294
management 291
measuring gauge 364
problems 350
reopening 292
spacings 341
Speed® bracket 107, 168, 169
Spider Screw® 152
splints 143, 145, 305, 307, 313, 333
fully balanced acrylic 375
Raintree Essix 380
resin-bonded 305
Triad 375
spring retainers 380
stability 227, 370–371
stainless steel
