Index

This index is prepared using letter-by-letter alphabetization

abfraction 20, 83–84, 296
abrasion
  choice of restorative material by Site and Size of lesion 220
glass-ionomer cement 161–162, 215
non-carious tooth structure loss 51, 55–56
oral environment 16–17
restorative approaches 56
ACFP see amorphous calcium fluoride phosphate
acid food
biofilm 9
caries activity and risk assessment 44
dental corrosion 15–16
lifestyle 245, 256
mechanical wear to crowns 19–20
non-carious tooth structure loss 53–54
occlusion 283–284
sialo-microbial-dental complex 10–11
ACP see amorphous calcium phosphate
activity and risk assessment
  assessing future risk of caries development 34
caries activity assessment 35
  Caries Management by Risk Assessment 36–37
  Cariogram analysis 35–36
  concepts and definitions 33
dental caries 33–49
  methods of assessing activity and risk 35
  surrogate markers and prediction of disease 34
  Traffic Light-Matrix System 37–48
acute inflammation 195–198, 199
acute injury 194–195
ageing
  dental pulp 6–7
  mechanical wear to crowns 21
  see also older people
air abrasion
  available equipment 125
cavity design principles 88
clinical application 125–127
clinical efficiency 127
health and safety issues 128
historical development 125
instruments for cavity preparation 117, 124–128
recommendations for use 127–128
alcohol 45, 246, 252
allergies to amalgam 190–191
alumina 128
amalgam 181–192
  advantages and disadvantages 216
  allergies 190–191
  burnishing 187
cavities
  conditioning 186
  condensation 186
  control of mercury content 184
copper content 184
evironmental issues 182, 189, 191, 216
extracoronal restorations 221
final polish and occlusal adjustment 187–188
G. V. Black 181, 183
handmixing 185
influence on cavity form 182–183
lamination technique 167
Index

amalgam (Continued)
machine mixing 185
matrix mixing and placement 185–186
mercury release during dental procedures 189–190
occlusion 283, 286
particle size and shape 183–185
periodontal tissue 274–275
potentially available forms of mercury 189, 191
progressive advances in formulation 183–185
pulpal response 208
restoration and maintenance of physical properties of tooth 218–219
restoration failure 290–297
trituration 185–188
zinc-free formulations 184
ameloblast proliferation 2
amorphous calcium fluoride phosphate (ACFP) 72
amorphous calcium phosphate (ACP) 72
anhydrous glass-ionomer cement (GIC) 141
annoyance factor 118, 123–124
antimicrobials
chlorhexidine 74–75, 235, 260–261
evidence-based recommendations 75
lifestyle 253–254, 260–261
older people 239–243
remineralization aids 73–76
sugar alcohols 75–76
xylitol 76, 253–254, 261
apical internal resorption 195–197
approximal surfaces 29–31
arginine bicarbonate 73
artificial sweeteners 75–76, 253–254, 261
attrition
identification and evidence of tooth grinding 56
non-carious tooth structure loss 51, 56–57
oral environment 17–18
prevention of tooth grinding 56–57
restorative approaches 57
bacterial microleakage 132, 194, 206, 209–211
base cements 157, 164, 208–209
β-TCP see functionalized β-tricalcium phosphate
bicusps
cavity design principles 93, 97–98, 113
dental caries 24–25, 30
glass-ionomer cement 162
occlusion 282, 285
oral environment 14–15, 19
biocompatibility 157–160, 172
biofilm
caries activity and risk assessment 34, 42–43
cavity design principles 111
demineralization–remineralization cycle 9–10
dental corrosion 15–16
diet and mineral maintenance 8–10
enamel maturation 10
non-carious tooth structure loss 54–55
oral environment 8–10, 15–16
pH relative to acid food 9
pH relative to bacterial metabolism 9
remineralization aids 74
bisphenol A glycidyldimethacrylate (bisGMA) 170
Black, G. V. 181, 183
Black's classification of carious lesions 82–83
blood supply 6
bulimia nervosa 256–257
burnishing 187
burs
annoyance factor 118, 123–124
application of load 121
classification 118
cutting efficiency 121
instruments for cavity preparation 117–124
linear surface speed 121
lubrication 121–122
selection 118–120, 122
size and shape 120–122
speed groups 122–124
standard bur kit 124
visual contact with bur head 122
caffeine 45, 246, 251–252
calcification 2–4
calcium-based remineralizing agents 67, 71–73
amorphous calcium phosphate 72
arginine bicarbonate 73
calcium carbonate 73
calcium sodium phosphosilicate-bioglass 73
Casein phosphopeptide-amorphous calcium phosphate 54–55, 72
dicalcium phosphate dihydrate 73
functionalized β-tricalcium phosphate 71–72
nano-hydroxyapatite 72–73
non-carious tooth structure loss 54–55
calcium carbonate 73
calcium hydroxide 208–209, 210
calcium sodium phosphosilicate-bioglass 73
CAMBRA see Caries Management by Risk Assessment
Canines 57
Caries Management by Risk Assessment (CAMBRA) 36–37
Cariogram analysis 35–36
carious lesions see dental caries
Carisolv see chemo-mechanical techniques
casein phosphopeptide-amorphous calcium phosphate
(CPP-ACP) 54–55, 72, 261
cavity design principles 87–115
 anterior teeth 104–105, 107–108
 choice of restorative material by Site and Size of lesion 219–221
 concepts and definitions 87–88
 proximal approach 98–99, 100–101
 Site 1 lesions 88–93, 219
 Site 1 – Size 0 (1.0) lesions 88
 Site 1 – Size 1 (1.1) lesions 88–90
 Site 1 – Size 2 (1.2) lesions 88, 90–91
 Site 1 – Size 3 (1.3) lesions 88, 91–92
 Site 1 – Size 4 (1.4) lesions 88, 92–93
 Site 2 lesions 109, 219–220
 Site 2 – Size 0 (2.0) lesions 93, 97
 Site 2 – Size 1 (2.1) lesions 93, 97–101
 Site 2 – Size 2 (2.2) lesions 93, 101–104
 Site 2 – Size 3 (2.3) lesions 93, 104–106
 Site 2 – Size 4 (2.4) lesions 93, 107–109
 Site 3 lesions 109–115, 220–221
 Site 3 – Size 0 (3.0) lesions 109
 Site 3 – Size 1 (3.1) lesions 110–111
 Site 3 – Size 2 (3.2) lesions 111–112
 Site 3 – Size 3 (3.3) lesions 112–113
 Site 3 – Size 4 (3.4) lesions 114–115
 slot cavities 97–98, 100, 292
 tunnel cavities 94, 96–97, 99–100, 292
cementum 7
centric relation position 278
ceramic restorations
 advantages and disadvantages 217–218
 choice of restorative material by Site and Size of lesion 220
 computer-aided design and manufacture 217–218
 porcelain fused to metal 218, 221
 restoration and maintenance of physical properties
 of tooth 219
 restoration failure 296, 298
cervical lesions
 invasive cervical resorption 62–65
 lifestyle 258
 non-carious tooth structure loss 55–56
 toothbrushing 18–19, 55–56
cervical margin 220
chemical trauma 194, 199, 206, 283–284
 chemo-mechanical techniques
 clinical effectiveness 135
 clinical indications 134
 historical development 133
 instruments for cavity preparation 117, 132–135
 modus operandi 133–134
 chewing gums 76, 253–254, 261
 chlorhexidine (CHX) 74–75, 235, 260–261
 chronic inflammation 195, 199
 chronic injury 194–195
 CHX see chlorhexidine
cigarette smoking 257–259
colour match
 amalgam 216
 ceramic restorations 219, 221
 glass-ionomer cement 162
 resin-based composites 178–179, 215
 compliance 37, 45, 48
 compomers 142–143
 composite resin see resin-based composites
 computer-aided design and manufacture (CADCAM)
 217–218
 condensation 186
 contact area 274–275
 copal varnish 104, 208
 core build-up 164
corrosion
 activity of corrosion 52–53
 amalgam 216
 choice of restorative material by Site and Size of
 lesion 220
 failure of biofilm and saliva protective effects 15–16
 gold alloy 217
corrosion (Continued)
lifestyle 256–257
non-carious tooth structure loss 52–55
occlusion 283–284
oral environment 14–16
prevention and monitoring 54–55
restorative approaches 55
saliva, biofilms and acids 54–55
source of acid from corrosion patterns 53–54
sources of acid-causing corrosion 15–16
specific contributory factors 53
corticosteroids 210
CPP-ACP see casein phosphopeptide-amorphous calcium phosphate
crowns
abfraction 20
abrasion 16–17
acid-accelerated wear 19–20
attrition 17–18
cavity design principles 91–93, 96
choice of restorative material by Site and Size of lesion 221
dental caries 31–32
glass-ionomer cement 156
mechanical wear as a pathological process 18–21
mechanical wear as a physiological process 16–18
oral environment 16–21
restoration failure 293
toothbrush-related cervical lesions 18–19
tooth fracture, cusp fracture and enamel flaking 20–21
tooth grinding/clenching 18, 20–21
young children 228
cusps
cavity design principles 91–93, 105–106, 108
choice of restorative material by Site and Size of lesion 220
mechanical wear to crowns 20–21
non-carious tooth structure loss 57–58
occlusion 278–280, 284–286
restoration failure 291–292
Cvek pulpotomy 210–211
defect classification systems 81–85
Black's classification of carious lesions 82–83
concepts and definitions 81–82
description of lesions by Site and Size 83–84
International Caries Classification and Management System 84–85
International Caries Detection and Assessment System 84–85
deflective inclines 283
dehydration
glass-ionomer cement 153, 160, 215
instruments for cavity preparation 126, 128–129
lifestyle 45, 248–249, 251–252
pulpal response 200, 206
demineralization-remineralization cycle
cavity design principles 88, 91–115
dental caries 12–14, 24–26, 28–32
lifestyle 261–262
non-carious tooth structure loss 54–55
occlusion 283
oral environment 9–10, 12–14
pulpal response 201–205, 209
remineralization aids 67–80
young children 226–227
