After completing this chapter you should be able to:

- Discuss why the study of professional practices is important to any entry-level designer.
- Explain how interior design is different from decorating as if you were talking to a client.
- Identify the characteristics of a profession.
- Explain how these characteristics relate to the practice of interior design.
- Understand the history of the profession in order to learn about the professional practice of interior design.
- Explain how the Great Depression of 1929 affected the interior design professional.
- Name the organizations that became the American Society of Interior Designers and International Interior Design Association.
- Identify key changes that led to the increasing professionalism of interior design.
- Compare the practices of residential interior design and commercial interior design.
- Explain how the section on the business of interior design affects your understanding of the profession as a whole.
- Discuss how interior design provides value to a residential client and a small business owner.

The stereotype of the interior design profession has been of someone who understands how to use color and can rearrange furniture. This is, as you already know, not the full story of what an interior design professional is or does.

Interior design is a complex process and it requires learning much more than the color wheel. The body of knowledge and skills needed by professionals is extensive, and the work of the interior designer—regardless of specialty—is demanding as well as exciting. The professional interior designer’s solutions have to meet functional needs of the client, as well as result in a pleasing environment. The individuals who design interiors must be sure that their designs meet building, fire safety, and accessibility codes. Interior design solutions must also meet sustainable design criteria required by the owners.
A professional interior designer must be willing to accept the legal and ethical consequences of his or her actions. Those actions impact the general public, clients, and other practitioners. Local laws (including professional regulation, where it exists) can impact the work of the professional interior designer. The profession of interior design is also a business. The management and efficient operation of a business are critical to the successful ongoing life of an interior design practice.

Society tends to grant professionals higher status, money, and respect, yet these do not come automatically upon attaining the educational criteria required of the profession. They come to the individual who has the attitude of service, commitment, and knowledge that is expected of the professional. This is no less true for an interior design professional than any of the “traditional” professions.

This chapter, to use a design metaphor, is a foundation of information important to the overall study of the profession and how it functions as a business. The professional practice of interior design requires attention to the business procedures, strategies, and protocols that any business must use for the business to be successful, profitable, and long lasting. Designing interiors is not only an enjoyable way to make a living, but also an awesome responsibility.

**WHY STUDY PROFESSIONAL PRACTICE?**

The profession of interior design is incredibly fascinating. Practitioners have the opportunity to design the interiors of multimillion-dollar houses or help a family have a more pleasing and nurturing home environment. Practitioners also have the opportunity to help a small business or huge corporation provide an interior environment that positively influences their clients and employees and helps the business achieve greater functionality and success.

The profession of interior design is also a business, so knowledge and application of business practice concepts are essential. A designer who is bad at business subconsciously hints to clients that they can take advantage of the designer by arguing and second-guessing the designer’s decisions. Furthermore, if the firm is not successful as a business, if it does not sustain profitability, it makes no difference how creative the practitioners might be: The poorly run business is likely to fail.

Interior design is much more than a way to express creativity. It is an endeavor that must recognize the importance of ethical conduct. It is about being socially responsible and realizing that, in today’s world, the interior design profession has a global reach. It’s not just about “us” in the United States, it’s about all of “us” on this planet. It is not a hobby; it is not the quick, do-it-yourself situation portrayed on cable TV.

An interior design firm must make a profit—or at least hopes to consistently make a profit. Studying and applying business practices to the management of the firm helps the owner have a greater chance of achieving a profit. If the business owner is to allow his or her company to grow to the extent that he or she would like it to grow, the owner must understand all the aspects of professional practice.

As an employee, you will be held accountable for the ongoing success of an interior design firm. You have a responsibility to work productively and bill those hours, or otherwise professionally and effectively complete your job tasks. You need to have some awareness of the expense it takes to operate a practice so that you do not waste company resources.
Students must master a basic understanding of business practices. Although a business practices class may come late in the curriculum, that placement does not make it any less important. I believe it is one of the two most important classes in a student’s curriculum, even if it’s not the most important to you individually. Without an understanding of the professional practice of interior design, as a student, emerging professional, or employee, your success will be limited.

Finally, many topics in this book are topics important to the National Council for Interior Design Qualification (NCIDQ) examination. Business topics are also common parts of other certification or licensing programs, as they are expected to be within curriculums accredited by the Council for Interior Design Accreditation (CIDA). If business were not important to the profession, these groups would not include business practices topics in their certification/accreditation requirements.

An interior design firm owner once told me that he wants to hire individuals who want his job. That doesn’t happen without knowing how to run a business.

DEFINING THE PROFESSION

Compared to many other professions, such as teaching and medicine, interior design is a relatively young. The use of the term interior design did not appear in general usage until after World War II, and the profession defined by any term did not really exist much before the 1900s. Individuals and organizations involved in the interior design profession work tirelessly to help the profession gain recognition in the minds of the public, as well as among practitioners and allied professionals.

What constitutes interior design has been debated and nurtured for many decades. Much of the public believes that “people who decorate interiors are interior decorators.” They often do not understand that there is a difference between decoration and design. The words of an article by Charlotte S. Jensen, FASID, then president of the NCIDQ board, still ring true: “Interior design is not the same as decoration. . . . Decoration is the furnishing or adorning a space with fashionable or beautiful things. Decoration, although a valuable and important element of an interior, is not solely concerned with human interaction or human behavior. Interior design is all about human behavior and human interaction.”1 And much more, many would say.

The most commonly quoted and utilized definition of interior design comes from the NCIDQ. This definition, offered in part with the complete version presented in the appendix, has been acknowledged and supported by the interior design professional associations:

Interior design is a multifaceted profession in which creative and technical solutions are applied within a structure to achieve a built interior environment. These solutions are functional, enhance the quality of life and culture of the occupants, and are aesthetically attractive. Designs are created in response to and coordinated with the building shell, and acknowledge the physical location and social context of the project. Designs must adhere to code and regulatory requirements, and encourage the principles of environmental sustainability. The interior design process follows a systematic and coordinated methodology, including research, analysis and integration of knowledge into the creative process, whereby the needs and resources of the client are satisfied to produce an interior space that fulfills the project goals.2
Another excellent definition comes from outside the profession. According to the U.S. Department of Labor, Bureau of Labor Statistics, interior designers “plan, design and furnish interiors of residential, commercial or industrial buildings. Formulate design which is practical, aesthetic, and conducive to intended purposes, such as raising productivity, selling merchandise, or improving life style.”

As you can see from these, interior design is much more than the stereotypical idea of picking out colors and fabrics. The responsibilities and skills required also go beyond those of the individual who has a flair for decorating.

WHAT IS A PROFESSION?

A profession is much more than the words in a definition provided by interested groups. According to one dictionary, a profession is “a paid occupation, especially one that involves prolonged training and a formal qualification.”

Johnson writes, “As defined by sociologists, a profession is an occupation that is based on theoretical and practical knowledge and training in a particular field. . . . Professions tend to be credentialed and regulated in relation to certain standards of performance and ethics, which makes them more autonomous and independent than other occupations.”

Some argue that interior design is not really a profession. This has often occurred when discussions with state legislatures concerning regulation of interior design or use of the title “interior designer” take place. Yet the interior design profession meets the standards set for defining a profession.

The profession of interior design, as we know it today, is guided by all the points noted by both of these authors and as further clarified by the definitions. If the measure of a profession involves the criteria offered by the preceding material, then interior design is a profession that has evolved and continues to evolve. Gordon Marshall writes, “A profession includes some central regulatory body to ensure the standard of performance of individual members; a code of conduct; careful management of knowledge in relation to the expertise which constitutes the basis of the profession’s activities; and lastly, control of number, selection, and training of new entrants.”

A professional does not emerge merely as a consequence of learning the technical principles required in the profession. Becoming a professional also requires an attitude of dedicated commitment to the work one does and to the advancement of the profession. Understanding what it takes to organize and maintain an interior design practice follows an understanding of the roots and contemporary concerns of the profession. In the 21st century, having talent as a designer is not enough to survive the ups and downs of the economic roller coaster.

How would you define the interior design profession?

PROFESSIONAL RESPONSIBILITY IN A CHANGING WORLD

Have you ever had the opportunity to stand below the soaring branches of a sequoia tree? I had a chance to do this when I visited Sequoia National Park in California several years ago. These magnificent redwoods can grow to more than 200 feet tall and live for more than 2000 years! I visited a site within the park where trees had been harvested in the late 1800s. The base of the trunk is huge. You don’t just walk up to the remaining stump and sit down. I walked up stairs to the top of a stump that was more than 10 feet above the ground. The surface size of that stump, as I recall, was about the size of a two-car garage.
It turns out that the wood of the sequoia tree—a species of redwood—although resistant to fire and decay, is very brittle, making it unsuitable for building. The wood was mostly used at the turn of the century for fence posts, grape stakes, and shingles. What a waste of a piece of our magnificent natural world!

Why is this story offered in a book about interior design professional practice?

Our industry uses huge amounts of natural resources in the creation of the products we specify for homes and businesses. The use of these materials has led to the depletion of many resources and threatens others. Construction and remodeling contribute to landfills at alarming levels. According to the U.S. Green Building Council (USGBC), “commercial construction projects generate up to 2.5 pounds of solid waste per square foot of floor space.” The math means that a 10,000-square-foot building could produce up to 12.5 tons of waste! That is a lot of wasted resources going to the landfill.

The choices we make when we specify goods and design solutions for the client can have profound future effects. Removing and disposing of carpeting that still has some useful life is a poor choice if there is a place in your community that can utilize this material. Exotic woods like rosewood are beautiful—but rosewood forests are being depleted, and should you choose to specify this exotic wood, you must be sure it is coming from a legal source. Consider the specification of paints made with volatile organic compounds that harm users of the space as well as the contractors doing the work. I know of a painter who worked in the construction industry for more than 30 years. He told me he now has only one lung, in large part because of the volatile materials he breathed those many years.

Of course, the interest in sustainable design and the willingness of clients and designers to embrace this concept in interiors varies widely. Often at issue is the assumed versus actual additional cost of specifying environmentally friendly or green products. A client who has serious allergies or respiratory problems suffers allergic reactions to the chemicals in many floor coverings, furniture products, and various textiles. Naturally, this type of client easily sees the benefits of green products. Commercial clients may see that the benefits of “going green” are worth an additional cost, but many are still reluctant to spend the extra money. However, design projects using green products and designing a project using the USGBC’s LEED® guidelines continue to gain momentum.

What we do as professionals—the specification of interior spaces and products—affects both the environment and the users of spaces. It behooves interior designers to learn more about sustainable design and how to mitigate environmental damage and support users’ health. Interior designers who wish to market or encourage the use of green design concepts must become thoroughly educated on the benefits to clients of using green products.

Another important issue for interior designers relates to the aging population—or should I say the aging of our client base? Baby boomers—those born between 1946 and 1964—began turning 60 in 2006. The group called “matures,” who were born between 1901 and 1945, represent another large proportion of our population of consumers. The issues of designing a home environment, as well as almost all types of commercial spaces, that are friendly to the senior user are critical.

As an interior designer, you need to realize an important fact about these older age groups: Most do not think of themselves as “old,” nor do they like being treated as old. It is not the interior designer’s responsibility to think of consumers in the older age groups either as being “old” or being less able to take care of themselves. It is, however, the interior designer’s responsibility
to help create a home or working environment that is satisfying, safe, and functional for the users.

Interior designers have a professional responsibility to learn about and apply design concepts that can make a home or business environment safe for all ages and abilities. Universal design concepts come to us as second nature now, as many no doubt like the extra size of an accessible toilet facility or the ease of using a ramp instead of stairs. Designers who are young themselves must learn about the older client and also the diplomacy involved in specifying products that will enhance the environment of their older adult clients.

You no doubt have heard of the term “aging in place.” In relation to the interior design of the home, this refers to a concept of designing or remodeling a residence so that the occupants can remain in their private residence rather than moving to some sort of senior living facility or apartment. Many changes to a residence that will help support or accommodate the inevitable physical changes to residents can be easily incorporated, whether by client choice or simple design specifications.

The concepts of safe and accessible interior design apply to both residential and commercial interiors, and thus should be part of the practice of all interior designers. In a commercial facility, we are guided by accessibility codes that require certain things to be designed into the space to make sure the space is accessible to all users. In a home—especially with younger home owners—many accessibility and safety issues might not be acknowledged until someone breaks a leg skiing and must cope with designs that are incompatible with someone on crutches or must use a wheelchair.

These issues also have become a business choice for many. Some designers have chosen to increase work with clients in senior care and assisted-living facilities. Just as we realize we must abide by accessibility codes in a commercial space, so too should interior designers now look toward simply deciding to meet client needs and demands for the design of LEED®-certified buildings and aging-in-place products and planning concepts.

Sustainable design, universal design, and design for an aging population are as much a way of thinking and a professional responsibility as design specialties. “If not now, when?” was asked about other important topics years ago. It is also asked now: When will you learn more about topics that affect the profession and interior design practice and lead to professional responsibility in a changing world?

The practice of interior design is a continually growing and changing profession. Interior designers must continually keep informed and up to date on critical issues that will likely affect their business in the present or the near future. Our professional responsibility in a changing world will likely take the interior design professional to places he or she never envisioned.

HISTORICAL OVERVIEW

History classes cover important material on furniture and architecture, but many do not discuss how the interior design profession arose and evolved. This brief section provides some context for that history.

Before the 20th century, interior decoration was the responsibility of artisans, craftsmen, painters, sculptors, and early architects. Shopkeepers were called enseigniers or ateliers in Europe. According to John Pile, Charles Percier (1764–1838) and Pierre-François-Léonard Fontaine (1762–1853) are thought by many to be the first professional interior designers. "Percier and Fontaine conceived of interior spaces developed under their full control in the manner of modern interior designers."
Elsie de Wolfe (1865–1950) was among the first individuals to bring the concept of professionalism to interior decoration in the United States. It was approximately during her career that the term *interior decoration* began to be used. Born in New York City and a member of the upper class, de Wolfe began her career as a professional interior decorator in 1904, when she was 39 years old. Her first commission, in 1905, was for the design of the Colony Club in New York City. Among de Wolfe’s clients were such notable figures as Henry C. Frick and Anne Pierpont Morgan. Because these early decorators often had a wealthy clientele, the term *society decorator* was often associated with them.

De Wolfe also wrote one of the earliest books about interior decoration, *The House in Good Taste*, in which she related her philosophy of decoration for homes. This book, which was republished in 2004, gives a fascinating glimpse into early interior decoration. She also is credited with being responsible for another milestone in the profession: receiving a fee for her design services rather than a commission on the sale of furniture. De Wolfe’s success inspired other women to enter the profession. It was one of the few acceptable professions for women at the turn of the century.

In approximately 1904, formal educational preparation was offered at the New York School of Applied and Fine Arts—founded as the Chase School. (This school is now known as Parsons, The New School for Design, located in New York City.) A few courses were offered in art or home economics programs in other schools, but formal training in interior decoration was not easy to obtain. Individuals who could not avail themselves of formal courses generally learned from magazines of the time, such as *House Beautiful* or *House & Garden*.

Postwar prosperity after World War I saw an increased interest in, and employment of, the interior decoration professional. In 1924, Eleanor McMillen opened McMillen Inc., claiming to be the first full-service interior decorating firm in the United States. This prosperity led to an increasing number of professionals with specialized knowledge in different types of interiors beyond residential interior decoration. By the late 1920s, many local “Decorators’ Clubs” had been started in various parts of the country. The Decorators Club located in New York is credited with being one of the first, if not the first, such organization.

Furniture manufacturers in the 1920s were producing fine-quality furniture in places such as Grand Rapids, Michigan, and High Point, North Carolina. Department stores used a display technique called a *vignette* to help the middle-class consumer visualize a room of furniture and thus encouraged consumers to utilize better-quality design in their homes. (Vignette, as used in the interior design profession, means a display of furniture and furnishings that simulates an actual room.) Magazines continued to be used by the masses of consumers to appreciate quality interior decoration done by professionals and primarily available only to the wealthy.

The Great Depression of the 1930s had a profound influence on the furniture industry and thus the interiors profession. It had a disastrous effect on the ability of the middle class to purchase furniture. Yet the leading society decorators remained relatively unaffected by the depression, as their wealthy clients could still afford to purchase quality goods. The society decorators, however, were purchasing goods from Europe rather than using American-made goods. This had a further, and decidedly negative, impact on American manufacturers.

Grand Rapids, Michigan, was the site of one of the earliest and largest to-the-trade-only semiannual furniture markets. At the time, Grand Rapids was one of the largest manufacturing centers in the United States. The Grand
Rapids Furniture Exposition, as it was officially called, was first held in December 1878. The market was held in January and June for 87 years. Local manufacturers displayed their products, educational programs were held, and manufacturers from other locations rented storefronts to show their goods.

The leaders of the Grand Rapids manufacturing center in the 1930s needed to bring the decorators to Grand Rapids so that they could see the quality of American-made furniture. With William R. Moore of Chicago, they put together a conference to organize a national professional organization. The conference was held during July 1931, in Grand Rapids, and speakers such as Frank Lloyd Wright were scheduled to appear in order to entice decorators to the conference. The decorators were invited to the various manufacturing plants and showrooms to see the furniture firsthand. By the end of the conference, the American Institute of Interior Decorators (AIID)—the precursor to the American Society of Interior Designers (ASID)—had been founded, with William R. Moore as its first national president.

World War II led to new manufacturing techniques that changed furniture and design styles. The modernism of the Bauhaus school—originally located in Germany—greatly influenced the design of buildings and interiors in the United States. Consumers had larger disposable incomes and were willing to buy again. It was during the 1940s that the term decorator began to lose favor in the industry. It was also at this time that educational standards and the number of programs offered grew, as interest in the profession increased. Massive growth in industrialism after the war also boosted the building, furniture, and interiors industries.

After World War II, nonresidential design became an increasingly important aspect of the profession for many reasons. The evolution of giant corporations was one factor. Curtain wall construction, suspended ceilings, and changes in construction to allow for vast, open interior spaces in office buildings all affected the design-build industry. Changes in the philosophy of the workplace created new furniture concepts, such as that of the “office landscape.” As companies embraced this planning philosophy, new specialists in space planning, lighting design, and acoustics became part of the profession.

Women were making an impact on the commercial design industry as well. Dorothy Draper (1889–1969) is credited with being the first woman interior decorator who specialized in commercial interiors. Florence Knoll established the Knoll Planning Group in the 1940s. This design company’s focus was on commercial interior design.

New design concepts, as well as other issues, created tension and arguments over educational requirements and admission to professional associations for interior designers. A renewed debate ensued over the words “decorator” versus “designer.” As educational programs developed, curriculums varied, resulting in uneven preparation. It was recognized that education needed to be more stringent, with formalized preparation that went beyond aesthetics. The growing complexity of the work of the interior designer led to professional associations formalizing requirements for membership.

New pressures and responsibilities will continue to affect all practitioners, businesses, and even students of interior design. This short history provides a context for the development of the interior design profession and is meant to give readers an appreciation of the roots of the profession called interior design. Table 1-1 summarizes its chronological development. This table is also included on the Wiley companion Web site as item 1-1. Additional history of the associations is presented later in Chapter 2.

The profession thrives during economic booms and, like every industry, redefines itself when the economy is slow. Regardless of the impact of the

economy, interior design professionals and students will be faced with continuous change in the profession. Finding one’s way by gaining education, experience, and competency to work as a professional interior designer in the 21st century includes achieving knowledge and skills in professional practice.

**INTERIOR DESIGN DIVISIONS**

The line between residential and commercial interior design as “divisions” of the profession has blurred due to changes in lifestyle and work style throughout the world. Many of those who think of themselves as residential designers occasionally do some small offices or other types of commercial spaces. Of course, those who are primarily commercial designers also occasionally design a client’s residence.

The practices of many in the profession beg the question, “Are there really two classic divisions to the interior design profession?” We have always thought that there were “residential” interior designers and “commercial” interior designers. Residential designers focus exclusively on the interiors of private residences, especially single-family dwellings, as well as other types of dwellings such as condominiums, townhouses, mobile homes, and apartments. Commercial interior designers focus on one or more types of spaces used for business and government, such as offices, stores, hotels, restaurants, schools, airports, hospitals, and so on.

Some refer to commercial interior design as nonresidential or contract interior design. The term *contract design* comes from the fact that many years ago, commercial projects more frequently were executed based on contracts for services. Of course, both residential and commercial projects are undertaken after a contract for services has been executed. In this book, I have labeled anyone who works with public spaces a *commercial interior designer*.

Perhaps it is time to consider that, regardless of the type of space, the process of design follows the same path. To put it very simply, information

</table>
must be gathered concerning the client’s needs (programming); ideas must be
generated to potentially solve those concerns (schematic design); those ideas
are further developed into detailed and accurate drawings or documents
(design development); additional drawings and documents are created to
ensure that the project is constructed and installed properly (construction
documents); specifications for the goods and materials needed are processed
and managed, as is the installation or finishing of all those interior goods
(construction administration); and numerous business practice issues must be
managed and practiced.

In the 21st century, it is not as important to define a division as it is to
define the profession. The definition of interior design provided in an earlier
section does not differentiate any particular number or types of divisions of
interior design. Perhaps it is time to recognize that neither is a less or more
important part of the profession.

INTERIOR DESIGN VALUE

“I don’t understand why you charge so much!”

Most interior designers have, at one time or another, heard this comment from
clients. Many professionals are still stumped as to how to respond to this
statement. After all these years, professionals and the profession still must
combat the undervaluing of interior design services.

Unfortunately, many clients still view interior design services as “fun” and
“easy” and more “creative” than business. Because they do not see or designers
do not communicate how interior design can be of value to them, many
question the designer’s suggestions and fees. Too many clients still do not
understand why professional interior designers should be compensated for
their services or even respected like other professional service providers.

To some degree it might be argued that we ourselves have been respon-
sible for this misconception. Interior designers can be bad businesspeople:
giving away design ideas at initial meetings; being unconcerned about costs in
running a business; and (frankly) letting the designer’s ego get in the way of
solving the client’s problem. These kinds of behavior do not identify good
businesspeople. The media contribute to this undervaluing of design as well,
too often portraying interior design as easy or frivolous. And with so many
people offering design and decorating services—many for free—why should
clients value interior design?

Part of the problem arises because interior design is an intangible: it
doesn’t exist until after it is done. The only way that the clients can judge the
quality of what they hope they will get is by seeing photos or drawings of work
that the designer has done for someone else. They can feel a product; they can
get comparisons online. Frequently the basis for judging the quality of what
they will get from an interior designer is personal aesthetics—and that is very
subjective.

As competition increases, designers have become more aware that they
are not solely in the business of creating wonderfully aesthetic and functional
interiors. Clients, including residential clients, are very interested in how the
work of the interior designer will benefit them. Sometimes this is primarily a
financial consideration. Sometimes this results in an interior that soothes the
soul or creates a low carbon footprint, or provides a healthy place for the
inhabitants. Interior designers can bring order out of chaos. They can bring
psychological comfort to those traumatized by serious health issues. They can bring joy to children in a play area. And these do have value.

Thus, the interior designer must communicate his or her value and worth to a project on the basis of factors beyond how nice it will look at the end and the discount the client will get on furniture. The designer brings value because of his or her professional education, knowledge of how to make a space work better, be healthier, improve the users’ comfort in the space, and, yes, look better.

The value of interior design also increases in the minds of clients as they see that the design community is committed to community service. Providing their problem-solving skills to nonprofit organizations like the Ronald McDonald House shows the community that interior designers are not just interested in making money by selling expensive furniture. It shows the community that interior designers are interested in the community at large.

It is hard to argue the fact that most individuals who choose interior design as a profession do so to apply their creative and aesthetic skills and talents to interior spaces. Consequently, those projects arguably improve the aesthetics of residences and various commercial facilities. Nevertheless, the true value of interior design goes way beyond these traditional views. As interior designers know well, the colors chosen for an interior can create excitement or calm. The fabric chosen can reduce maintenance issues or explode them. The products themselves, if not chosen wisely, can sabotage basic safety in an emergency or emit poisonous and harmful fumes.

An individual I once worked with, at an office furnishings dealership, introduced the design department to a client by saying “and this is the icing on the cake—the design department.” Interior design is much more than icing, regardless of the space. The designer brings value to the client through his or her knowledge, experience, and skills gained through educational training and work experience. As you will read in depth in Chapter 2, these elements are critical keys to the advancement of the individual and the profession.

THE BUSINESS OF INTERIOR DESIGN

Not all designers get to work on multimillion-dollar residences, mega-hotels, or the latest celebrity chef’s restaurant. The vast majority of interior designers work on smaller projects of various kinds. They help a family get a new home ready for occupancy and enjoyment. They remodel a franchise motel/hotel along the freeway. They give new life to a restaurant that needs a fresh look. They help seniors adjust their home environment to be more ergonomically friendly. Quite honestly, they might also simply specify new wall treatments, a few pieces of furniture, and stage a house for resale.

Interior design is all of these things and many more. It touches people in all walks of life and all economic positions. Also, it is a global profession: Interiors play a significant part in helping businesses succeed and people to feel comfortable in their homes throughout the world.

It is important for the student and emerging professional interior designer to understand what it is like in the real world. This section has been added to the chapter to present some basic yet very important information to help readers understand that interior design is a business as well as a creative opportunity.

For a business to exist and (we hope) succeed, it must have at least three elements. First, it has to have people who are committed to operating and
participating in the business. Second, it must have customers or clients who will purchase whatever the business provides in terms of services and possibly products. Third, it must have adequate financial resources for operation.

People

An interior design business starts with the owner committed to doing design work the way he or she thinks is right. The owner should have experience in the field before opening the doors. Many students think that once they have graduated from a program, they are automatically ready to open their own offices. Some do. Many fail and end up working for someone else.

When you read Chapter 15 and the other chapters dealing with creating a design business, you will gain a deeper appreciation for what it is to be the owner of a design firm—even one whose only employee is the owner. There is a lot more to it than having a diploma, passing a licensing exam, and setting up an office.

There is risk involved in opening a business: financial risk, legal risk, and even risk in hiring employees. Employees—the people of the firm—must work as a team and must work in accordance with the rules the owner has set up. If you work for a sole practitioner or any small design firm, your willingness and ability to be a team player are crucial. Each individual in the company has a role on the team. Sometimes that role is not very glamorous. Not everything about interior design is glamorous.

As an employee, you need to remember that the firm does not belong to you. The owner, not you, makes decisions concerning how to go about doing a design project. The owners may veto work that you have spent hours doing with a wave of the hand. Guess what? It’s their prerogative to do so, because it’s their names on the door. Their risk is paramount to yours.

As the new person in the office, it is wise for you to keep your eyes and ears open; listen and observe what is going on. Each office has its way of doing things, and you need to learn those processes. Become a team player, and your experience opportunities will grow, just as your experience as a professional interior designer will grow.

Clients

You will read in Chapters 23 and 24 about marketing strategies and methods. Your boss will spend a great deal of time cultivating business and projects for the firm. Certainly some client opportunities walk in the door because of a referral or something the client saw on the Internet or in a magazine. Those are part of the strategies and methods that the owner must use to cultivate clients.

Design firms work very hard to create an image that they hope will appeal to potential clients. That image is commonly referred to as the company’s brand. A design firm’s brand is the combination of images and encounters that the customer perceives, accepts, and experiences with a company providing services and (depending on the company) selling products. You and your work express that brand to clients.

Clients have an impression of what it is like to work with an interior designer. That impression has been fostered by what clients see in the media, movies, and previous experiences with designers or others in the design–build industry. For many, the reality of working with you or others in the studio will be different from what their reference impression is. That is why your boss, your professors, and this textbook stress the importance of professionalism.
The more professional you are in your interactions with clients, coworkers, vendors, and others who come in contact with the firm, the stronger the firm’s brand will grow.

**Financial Resources**

Marketing brings in clients with projects. Those projects bring in the funds to pay salaries and operate the business. Our industry and profession have suffered through recessions as well as exceptional economic times. But the financial resources needed to operate the practice are never easy to obtain and retain. When your boss is concerned about someone in the office using the telephone or Internet for personal use, she is probably remembering that those personal calls cost the company—not the user—money.

A firm makes money by charging design fees for services and perhaps by selling merchandise to clients. Design services have a cost to the company, as well as representing revenue. The biggest cost to the firm for providing design services is the salary of the designer. As you will read in Chapter 27, salary is not the only part of the employee cost of providing design services.

There are other costs involved in those services. The company has to pay utility bills, buy supplies like pens and ink for the printer, and pay monthly Web fees. These operating expenses are deducted from the revenue that is obtained from clients. Only after the expenses are paid does the firm make a potential profit. And when there is no profit, there are no funds for the owner to provide benefits to employees.

You might not think it’s important to understand accounting, but it is. Chapter 21 on basic accounting will not teach you how to be an accountant or how to keep the financial records, but it will help you understand the important point that revenue and profit are not the same thing. Just because the company has sold a sofa or charged a design fee does not mean it has made a profit and can now give you a raise.

Profit only results after all the expenses of the company are subtracted from revenue. So, when it costs your boss more to operate the company than the amount of revenue the company brings in, a loss occurs. Too many months of operating at a loss means the owner might have to let you go and even close the doors.

As a final note, the business of interior design, which is the professional practice of interior design, goes way beyond just design. It is important for the student, the emerging professional, and the experienced interior designer to understand ethics, legal issues, contract creation, and appropriate ways to be compensated for work. It is also critical to be a good project manager, as any project (regardless of size) has many components to be controlled. It is also important for anyone in the interior design profession to understand basic accounting, marketing strategies, and how to organize a practice, operate that business, and hire and manage employees. All of these topics and more are presented in this textbook.

The “real world” of interior design is at times glamorous. Yet it is also many hours of paperwork to create specifications, prepare drawings, resolve problems with vendors, track missing furniture, and more problems that you probably don’t want to read about right now! Mostly, it is an opportunity to create places for people to come home to and be safe and comfortable; to encourage recovery from illness; to enjoy a special event or vacation; and so on. It is a great way to work and make a living. Very few interior designers who have worked for several years would say differently in good times—or bad!
Interior Design Economic Snapshot

The economic impact of interior design is hard to judge, because so many businesses are single owners. These businesses stay under the radar of most agencies that gather information on industry. Like many businesses, interior design booms when construction and the general economy boom and falls when a recession hits.

One place to find the impact of interior design on the economy is the U.S. Bureau of Labor Statistics (BLS). It publishes a report on occupational outlook that pinpoints various occupations, including interior design. Look for the Occupational Outlook Handbook on www.bls.gov/ooh/arts-and-design. It is also referred to as SOC Code 27-1025. This report gives information on overall job outlook for the next 10 years, information on median pay, and other important general information for anyone looking at interior design as a career.

According to the latest report, the BLS suggests that interior design employment will grow over the next 10 years; it reports that in 2010, the number of those employed as interior designers was 56,500 and that the number is expected to hit 67,400 in 2020. The median wage in 2010 was reported as $46,280.* Additional information on salaries in interior design is provided in Chapter 30.

Median wage information on many cities can be accessed from the U.S. Department of Labor site www.careeronestop.org. This site allows you to compare wage information by state. You need to click the tab "Arts, Design, Entertainment, Sports and Media" to find the information on interior design. There is other information on that site related to job search.

The American Society of Interior Designers prepares an annual report titled the Environmental Scanning Report. This report looks at the economy, demographics, and other topics more specific to interior design. It is available online to members and may be available to nonmembers by contacting the national office (www.asid.org). Another worthwhile report from ASID is The Interior Design Profession: Facts and Figures, updated in 2012. There is a charge for this report, but it is well worth the cost, as it provides information on numbers of designers, firms, design specialties, and other interesting information. Readers may also want to check with the International Interior Design Association or other professional associations for additional reports on economic and demographic topics.

Interior Design magazine annually provides interesting statistical information on very large ("giant") interior design firms. This information gives a glimpse of the economic impact of the interior design profession. The January 2012 issue reported group earnings at $2.4 billion in fees.** This represented an increase since the previous report. Data are also provided on median salary rates ($65,000 for "designer"). It also reported that hires were up for this report, but still lower than prerecession numbers.

The Interior Design magazine report also provides information on the amount of fees earned by specialties, including residential and the largest firms that do foreign projects. Remember that salary rates in this report are for the 100 largest design firms participating in this annual report; they may not reflect salary rates in your area. Note also that these types of data reports lag approximately one year from when the data were obtained. In other words, a report published in 2012 is based on data from 2011.

WHAT WOULD YOU DO?

Each chapter concludes with several situations that may or may not involve ethical behavior or other professional choices and challenges. These scenarios can be discussed individually or in groups. As you read these scenarios, consider ethics, good business practice, and overall professional conduct. The code of ethics from ASID or IIDA may apply to some situations.

1. It came to Phyllis’s attention that her boss was considering hiring a designer—Jane Doe. Phyllis knew Jane because they worked together at a different design firm a few years ago. Phyllis knew that Jane had been fired because the other employer discovered Jane falsifying several types of client documents in connection with projects. Jane found out this information from someone at that previous firm after Phyllis had left the firm.
2. Alex has been designing hospitality spaces in the East for six years. She has become increasingly interested in sustainable design and is planning to become LEED® certified. A former client, Robert Smith, has contacted her about the design of his second home in Wyoming. Because Alex started in design at a residential furniture store/studio, she feels very comfortable in doing the project.

   Mr. Smith wants to use green products, but is concerned about the extra costs. He heard from a friend that “green stuff costs a lot of green.” The client wants Alex to do the interior planning and specification and to use green products if they do not cost too much. He is also reluctant to pay the fees that Alex plans to charge to cover her travel. He suddenly says, “Let’s reduce your carbon footprint by not having you travel to the job site at all.”

3. John graduated from an accredited four-year program in interior design and has been working as a residential interior designer for four years. A past client asks John to design a 25-unit assisted-living facility that would include 6 units to house nursing care patients. John has no experience per se in the design of medical facilities. Should John take on this project?

4. Roberta owns a design studio and specializes in the design of high-end residential projects. She has recently lost two projects to a competitor where a former employee now works. One of those projects was for a former client couple, who are building a very large penthouse in Manhattan.

   Roberta is quite upset about losing the project for the former clients. She thought they had gotten along very well and doesn’t understand why the clients would go to someone else. She calls the former clients to ask why they went with a different designer. Feeling that she got an unsatisfactory answer, Roberta now plans to ask vendors about the designer who was given the contract by her former clients.
