1 Antenna Basics 1
Luigi Boccia and Olav Breinbjerg

1.1 Introduction 1
1.2 Antenna Performance Parameters 2
  1.2.1 Reflection Coefficient and Voltage Standing Wave Ratio 2
  1.2.2 Antenna Impedance 3
  1.2.3 Radiation Pattern and Coverage 4
  1.2.4 Polarization 6
  1.2.5 Directivity 7
  1.2.6 Gain and Realized Gain 8
  1.2.7 Equivalent Isotropically Radiated Power 8
  1.2.8 Effective Area 9
  1.2.9 Phase Center 9
  1.2.10 Bandwidth 9
  1.2.11 Antenna Noise Temperature 9
1.3 Basic Antenna Elements 10
  1.3.1 Wire Antennas 10
  1.3.2 Horn Antennas 10
  1.3.3 Reflectors 15
  1.3.4 Helical Antennas 17
  1.3.5 Printed Antennas 19
1.4 Arrays 26
  1.4.1 Array Configurations 28
1.5 Basic Effects of Antennas in the Space Environment 30
  1.5.1 Multipaction 30
  1.5.2 Passive Inter-modulation 31
  1.5.3 Outgassing 31

4 Space Environment and Materials 106

J. Santiago-Prowald and L. Salghetti Drioli 106

4.1 Introduction 106
4.2 The Space Environment of Antennas 106
4.2.1 The Radiation Environment 107
4.2.2 The Plasma Environment 109
4.2.3 The Neutral Environment 110
4.2.4 Space Environment for Typical Spacecraft Orbits 111
4.2.5 Thermal Environment 111
4.2.6 Launch Environment 113
4.3 Selection of Materials in Relation to Their Electromagnetic Properties 117
4.3.1 RF Transparent Materials and Their Use 117
4.3.2 RF Conducting Materials and Their Use 117
4.3.3 Material Selection Golden Rules for PIM Control 118
## Contents

4.4 Space Materials and Manufacturing Processes 118
   4.4.1 Metals and Their Alloys 118
   4.4.2 Polymer Matrix Composites 121
   4.4.3 Ceramics and Ceramic Matrix Composites 125

4.5 Characterization of Mechanical and Thermal Behaviour 127
   4.5.1 Thermal Vacuum Environment and Outgassing Screening 127
   4.5.2 Fundamental Characterization Tests of Polymers and Composites 128
   4.5.3 Characterization of Mechanical Properties 130
   4.5.4 Thermal and Thermoelastic Characterization 131

5 Mechanical and Thermal Design of Space Antennas 133
   J. Santiago-Prowald and Heiko Ritter

5.1 Introduction: The Mechanical–Thermal–Electrical Triangle 133
   5.1.1 Antenna Product 134
   5.1.2 Configuration, Materials and Processes 135
   5.1.3 Review of Requirements and Their Verification 136

5.2 Design of Antenna Structures 136
   5.2.1 Typical Design Solutions for Reflectors 136
   5.2.2 Structural Description of the Sandwich Plate Architecture 143
   5.2.3 Thermal Description of the Sandwich Plate Architecture 143
   5.2.4 Electrical Description of the Sandwich Plate Architecture in Relation to Thermo-mechanical Design 144

5.3 Structural Modelling and Analysis 144
   5.3.1 First-Order Plate Theory 145
   5.3.2 Higher Order Plate Theories 148
   5.3.3 Classical Laminated Plate Theory 148
   5.3.4 Homogeneous Isotropic Plate Versus Symmetric Sandwich Plate 149
   5.3.5 Skins Made of Composite Material 150
   5.3.6 Honeycomb Core Characteristics 152
   5.3.7 Failure Modes of Sandwich Plates 152
   5.3.8 Mass Optimization of Sandwich Plate Architecture for Antennas 154
   5.3.9 Finite Element Analysis 156
   5.3.10 Acoustic Loads on Antennas 159

5.4 Thermal and Thermoelastic Analysis 166
   5.4.1 The Thermal Environment of Space Antennas 166
   5.4.2 Transverse Thermal Conductance Model of the Sandwich Plate 167
   5.4.3 Thermal Balance of the Flat Sandwich Plate 168
   5.4.4 Thermal Distortions of a Flat Plate in Space 169
   5.4.5 Thermoelastic Stability of an Offset Parabolic Reflector 171
   5.4.6 Thermal Analysis Tools 172
   5.4.7 Thermal Analysis Cases 173
   5.4.8 Thermal Model Uncertainty and Margins 173

5.5 Thermal Control Strategies 173
   5.5.1 Requirements and Principal Design Choices 173

8 Deployable Mesh Reflector Antennas for Space Applications: RF Characterizations 314
Paolo Focardi, Paula R. Brown, and Yahya Rahmat-Samii

8.1 Introduction 314
8.2 History of Deployable Mesh Reflectors 315
8.3 Design Considerations Specific to Mesh Reflectors 320
8.4 The SMAP Mission – A Representative Case Study 320
8.4.1 Mission Overview 320
8.4.2 Key Antenna Design Drivers and Constraints 322
8.4.3 RF Performance Determination of Reflector Surface Materials 327
8.4.4 RF Modeling of the Antenna Radiation Pattern 329
8.4.5 Feed Assembly Design 338
8.4.6 Performance Verification 340
8.5 Conclusion 341

### 13.2 Challenges of Antenna Design for SAR

**13.2.1 Reflector Antennas**

**13.2.2 Active Antennas and Subsystems**

### 13.3 A Review of the Development of Antennas for Spaceborne SAR

- **13.3.1 TecSAR**
- **13.3.2 SAR- Lupe**
- **13.3.3 ASAR (EnviSat)**
- **13.3.4 Radarsat 1**
- **13.3.5 Radarsat 2**
- **13.3.6 Palsar (ALOS)**
- **13.3.7 TerraSAR-X**
- **13.3.8 COSMO (SkyMed)**

### 13.4 Case Studies of Antennas for Spaceborne SAR

- **13.4.1 Instrument Design**
- **13.4.2 SAR Antenna**

### 13.5 Ongoing Developments in SAR Antennas

- **13.5.1 Sentinel 1**
- **13.5.2 Saocom Mission**
- **13.5.3 ALOS 2**
- **13.5.4 COSMO Second Generation**

### 13.6 Acknowledgments

### 14 Antennas for Global Navigation Satellite System Receivers

**Chi-Chih Chen, Steven (Shichang) Gao, and Moazam Maqsood**

#### 14.1 Introduction

#### 14.2 RF Requirements of GNSS Receiving Antenna

- **14.2.1 General RF Requirements**
- **14.2.2 Advanced Requirements for Enhanced Position Accuracy and Multipath Signal Suppression**

#### 14.3 Design Challenges and Solutions for GNSS Antennas

- **14.3.1 Wide Frequency Coverage**
- **14.3.2 Antenna Delay Variation with Frequency and Angle**
- **14.3.3 Antenna Size Reduction**
- **14.3.4 Antenna Platform Scattering Effect**

#### 14.4 Common and Novel GNSS Antennas

- **14.4.1 Single-Element Antenna**
- **14.4.2 Multi-element Antenna Array**

#### 14.5 Spaceborne GNSS Antennas

- **14.5.1 Requirements for Antennas On Board Spaceborne GNSS Receivers**
- **14.5.2 A Review of Antennas Developed for Spaceborne GNSS Receivers**

#### 14.6 Case Study: Dual-Band Microstrip Patch Antenna for Spacecraft Precise Orbit Determination Applications

- **14.6.1 Antenna Development**
- **14.6.2 Results and Discussions**

#### 14.7 Summary

---

15 Antennas for Small Satellites
Steven (Shichang) Gao, Keith Clark, Jan Zackrisson, Kevin Maynard, Luigi Boccia, and Jiadong Xu

15.1 Introduction to Small Satellites
15.1.1 Small Satellites and Their Classification
15.1.2 Microsatellites and Constellations of Small Satellites
15.1.3 Cube Satellites
15.1.4 Formation Flying of Multiple Small Satellites

15.2 The Challenges of Designing Antennas for Small Satellites
15.2.1 Choice of Operating Frequencies
15.2.2 Small Ground Planes Compared with the Operational Wavelength
15.2.3 Coupling between Antennas and Structural Elements
15.2.4 Antenna Pattern
15.2.5 Orbital Height
15.2.6 Development Cost
15.2.7 Production Costs
15.2.8 Testing Costs
15.2.9 Deployment Systems
15.2.10 Volume
15.2.11 Mass
15.2.12 Shock and Vibration Loads
15.2.13 Material Degradation
15.2.14 Atomic Oxygen
15.2.15 Material Outgassing
15.2.16 Creep
15.2.17 Material Charging
15.2.18 The Interaction between Satellite Antennas and Structure

15.3 Review of Antenna Development for Small Satellites
15.3.1 Antennas for Telemetry, Tracking and Command (TT&C)
15.3.2 Antennas for High-Rate Data Downlink
15.3.3 Antennas for Global Navigation Satellite System (GNSS) Receivers and Reflectometry
15.3.4 Antennas for Intersatellite Links
15.3.5 Other Antennas

15.4 Case Studies
15.4.1 Case Study 1: Antenna Pointing Mechanism and Horn Antenna
15.4.2 Case Study 2: X-band Downlink Helix Antenna

15.5 Conclusions

16.2 Overview of Radio Astronomy and the Role of Space Antennas
16.3 Space Antennas for Cosmic Microwave Background Studies
16.3.1 The Microwave Background
18.4.3 Promising Antenna Concepts and Technologies
18.5 Increase Telecommunication Satellite Throughput
18.5.1 Problem Area and Challenges
18.5.2 Present and Expected Future Space Missions
18.5.3 Promising Antenna Concepts and Technologies
18.6 Enable Sharing the Same Aperture for Multiband and Multipurpose Antennas
18.6.1 Problem Area and Challenges
18.6.2 Present and Expected Future Space Missions
18.6.3 Promising Antenna Concepts and Technologies
18.7 Increase the Competitiveness of Well-Established Antenna Products
18.7.1 Problem Area and Challenges
18.7.2 Present and Expected Future Space Missions
18.7.3 Promising Antenna Concepts and Technologies
18.8 Enable Single-Beam In-Flight Coverage/Polarization Reconfiguration
18.8.1 Problem Area and Challenges
18.8.2 Present and Expected Future Space Missions
18.8.3 Promising Antenna Concepts and Technologies
18.9 Enable Active Antennas at Affordable Cost
18.9.1 Problem Area and Challenges
18.9.2 Present and Expected Future Space Missions
18.9.3 Promising Antenna Concepts and Technologies
18.10 Develop Innovative Antennas for Future Earth Observation and Science Instruments
18.10.1 Problem Area and Challenges
18.10.2 Present and Expected Future Space Missions
18.10.3 Promising Antenna Concepts and Technologies
18.11 Evolve Towards Mass Production of Satellite and User Terminal Antennas
18.11.1 Problem Area and Challenges
18.11.2 Present and Expected Future Space Missions
18.11.3 Promising Antenna Concepts and Technologies
18.12 Technology Push for Enabling New Missions
18.12.1 Problem Area and Challenges
18.12.2 Promising Antenna Concepts and Technologies
18.13 Develop New Approaches for Satellite/Antenna Modelling and Testing
18.13.1 Problem Area and Challenges
18.13.2 Promising Antenna Concepts and Technologies
18.14 Conclusions
