Preface  xi

1. Introduction to Coatings  1
   1.1 Definitions and Scope  1
   1.2 Types of Coatings  3
   1.3 Composition of Coatings  3
   1.4 Coating History  4
   1.5 Commercial Considerations  5
   References  5

2. Polymerization and Film Formation  6
   2.1 Polymers  6
   2.2 Polymerization  13
   2.3 Film Formation  19
   References  27

3. Flow  29
   3.1 Shear Flow  29
   3.2 Types of Shear Flow  30
   3.3 Determination of Shear Viscosity  32
   3.4 Shear Viscosity of Resin Solutions  36
   3.5 Viscosity of Liquids With Dispersed Phases  40
   3.6 Other Modes of Flow  42
   References  44

4. Mechanical Properties  46
   4.1 Introduction  46
   4.2 Basic Mechanical Properties  46
   4.3 Fracture Mechanics  57
   4.4 Abrasion, Scratch, and Mar Resistance  58
   4.5 Measurement of Mechanical Properties  61
   4.6 Tests of Coatings on Substrates  62
   References  66

5. Exterior Durability  67
   5.1 Photoinitiated Oxidative Degradation  67
   5.2 Photostabilization  70
   5.3 Degradation of Chlorinated Resins  75
   5.4 Hydrolytic Degradation  75
   5.5 Other Modes of Failure on Exterior Exposure  77
   5.6 Testing for Exterior Durability  78
   5.7 Service Life Prediction  84
   References  84

6. Adhesion  86
   6.1 Mechanisms of Adhesion  86
   6.2 Mechanical Stresses and Adhesion  89
   6.3 Adhesion to Metal Surfaces  90
   6.4 Characterization of Surfaces  92
   6.5 Organic Chemical Treatment of Substrates to Enhance Adhesion  93
   6.6 Covalent Bonding to Glass and Metal Substrates  94
   6.7 Adhesion to Plastics and to Coatings  95
   6.8 Testing for Adhesion  96
   References  98

7. Corrosion Protection by Coatings  99
   7.1 Corrosion Basics  99
   7.2 Corrosion of Uncoated Steel  100
   7.3 Corrosion Protection of Metals  101
   7.4 Corrosion Protection by Intact Coatings  103
   7.5 Corrosion Protection by Nonintact Films  107
   7.6 Evaluation and Testing  111
   References  113

8. Acrylic Resins  115
   8.1 Thermoplastic Acrylic Resins  115
   8.2 Thermosetting Acrylic Resins  116
   8.3 Water-Reducible Thermosetting Acrylic Resins  121
   References  124
9. Latexes 125

9.1 Emulsion Polymerization 125
9.2 Acrylic Latexes 133
9.3 Vinyl Ester Latexes 135
9.4 Thermosetting Latexes 137
References 139

10. Polyester Resins 141

10.1 Hydroxy-Terminated Polyester Resins for Conventional Solids Coatings 142
10.2 Polyester Resins for High Solids Coatings 146
10.3 Carboxylic Acid-Terminated Polyester Resins 147
10.4 Carbamate-Functional Polyester Resins 148
10.5 Water-Reducible Polyester Resins 148
10.6 Polyester Resins for Powder Coatings 149
References 150

11. Amino Resins 151

11.1 Synthesis of Melamine–Formaldehyde Resins 151
11.2 Types of MF Resins 154
11.3 MF–Polyol Reactions in Coatings 155
11.4 Other Amino Resins 161
References 162

12. Polyurethanes and Polyisocyanates 163

12.1 Reactions of Isocyanates 164
12.2 Kinetics of Reactions of Isocyanates with Alcohols 165
12.3 Isocyanates Used in Coatings 170
12.4 Two-Package (2K) Solventborne Urethane Coatings 173
12.5 Blocked Isocyanates 176
12.6 Moisture-Curable Urethane Coatings 181
12.7 Waterborne Polyurethane Coatings 182
12.8 Hydroxy-Terminated Polyurethanes 185
References 186

13. Epoxy and Phenolic Resins 188

13.1 Epoxy Resins 188
13.2 Amine Cross-Linked Epoxy Resins 193
13.3 Other Cross-Linking Agents for Epoxy Resins 199
13.4 Water-Reducible Epoxy/Acrylate Graft Copolymers: Epoxy/Acrylate Hybrids 201
13.5 Epoxy Resin Phosphate Esters 202
13.6 Phenolic Resins 202
References 204

14. Drying Oils 205

14.1 Compositions of Natural Oils 205
14.2 Autoxidation and Cross-Linking 206
14.3 Synthetic and Modified Drying Oils 209
References 211

15. Alkyd Resins 213

15.1 Oxidizing Alkyds 214
15.2 High Solids Oxidizing Alkyds 217
15.3 Waterborne Oxidizing Alkyds 218
15.4 Nonoxidizing Alkyds 220
15.5 Synthetic Procedures for Alkyd Resins 220
15.6 Modified Alkyds 223
15.7 Uralkyds and Other Autoxidizable Urethanes 224
15.8 Epoxy Esters 225
References 226

16. Silicon Derivatives 228

16.1 Silicones 228
16.2 Reactive Silanes 232
16.3 Orthosilicates 233
References 234

17. Other Resins and Cross-Linkers 235

17.1 Halogenated Polymers 235
17.2 Cellulose Derivatives 237
17.3 Unsaturated Polyester Resins 238
17.4 (Meth)Acrylated Oligomers 240
17.5 2-Hydroxyalkylamide Cross-Linkers 240
17.6 Acetoacetate Cross-Linking Systems 241
17.7 Polyaziridine Cross-Linkers 242
17.8 Polycarbodiimide Cross-Linkers 242
17.9 Polycarbonates 243
17.10 Non-Isocyanate Two-Package Binders 243
17.11 Dihydrazides 244
References 244

18. Solvents 246

18.1 Solvent Composition 246
18.2 Solubility 247
18.3 Solvent Evaporation Rates 251
18.4 Viscosity Effects 257
18.5 Flammability 258
18.6 Other Physical Properties 259
18.7 Toxic Hazards 259
18.8 Atmospheric Photochemical Effects 260
18.9 Regulation of Solvent Emissions from Coatings 262
References 265
29.9 Advantages, Disadvantages, and Selected Advances  416
References  418

30. Product Coatings for Metal Substrates  419
30.1 OEM Automotive Coatings  419
30.2 Appliance Coatings  427
30.3 Container Coatings  427
30.4 Coil Coating  431
30.5 Coatings for Aircraft  435
References  436

31. Product Coatings for Nonmetallic Substrates  438
31.1 Coatings for Wood  438
31.2 Coating of Plastics  444
References  448

32. Architectural Coatings  449
32.1 Exterior House Paints and Primers  450
32.2 Flat and Semigloss Interior Paints  455

32.3 Gloss Enamels  459
References  463

33. Special Purpose Coatings  464
33.1 Maintenance Paints  464
33.2 Marine Coatings  471
33.3 Automobile Refinish Paints  474
33.4 Traffic Striping Paints  477
References  478

34. Functional Coatings  480
34.1 Superhydrophobic and Superhydrophilic Coatings  480
34.2 Ice-Phobic Coatings  483
34.3 Self-Healing Coatings  484
34.4 Environmentally Sensing Coatings  485
34.5 Antimicrobial Coatings  486
References  486
