Index

AA, see acrylic acid
AAEM, see acetoacetoxyethyl methacrylate
ablative coatings, 473
abrasion resistance, 58–59, 65, 433, 440, 443, 466
abrasive particle blasting, 90
absorption of radiation, 404–406
attenuation of, 405
film thickness, effect of, 405
photobleaching, 405
substrate, effect of, 406
acetaldehyde, 136
acetoacetate cross-linking systems, 241–242
acetoacetoxyethyl methacrylate (AAEM), 241
acetoacetylated resins, 240, 241, 244
acetylene black pigment, 301
acid etch, 424, 425
acid number, 121
acid precursors, 157, 201
acid rain, 67, 112, 453
acrolein, 301
acrylic(s), 14, 362
acrylic acid (AA), 126
acrylic latexes, 78, 182–184, 371, 412
acrylic/polyurethane blends and hybrid
dispersions, 183–184
acrylic powder coatings, 389
acrylic resins, see also thermoplastic acrylic
(TPA) resins
functionality of, 117
high solids, 39, 117–119
thermosetting, 116–120
activation energy (Ea), 21–22
for viscous flow, 36
activity coefficient in solvent mixtures, 253
acrylics, 407
acylphosphine oxides, 407
addition–fragmentation chain transfer
(AFTR) monomers, 410, 417
addition polymerization, 13
additive color mixing, 281
additives, 4
ADH, see adipic dihydrazide
adhesion, 89
adsorption effect on adhesion, 89
on pigment surfaces, 209, 296, 308, 310, 313, 323, 325
aldehydes, 205
alkyl alcohols, 246
alkyd coatings, 433, 472
alkyd gloss enamels, 459–460
alkyd resins
alkyd emulsions, 219–220
autooxidizable polyurethane dispersions, 225
epoxy esters, 225–226
high solids oxidizing alkyls, 217–218
modified alkyls, 223–224	nonoxidizing alkyls, 220
oxidizing alkyls
dibasic acid selection, 216–217
monobasic acid selection, 215–216
terephthalic acid, 216
polyol selection, 216
synthetic procedures
fatty acid process, 221
monoglyceride process, 220–221
process variations, 222–223
uralkyds, 224–225
water-reducible alkyls, 218–219
alkyl phenol ethoxylates (APEs), 127
alkyls, 385
alternating copolymers, definition of, 6
aluminum, 1, 46, 47, 55, 56, 83, 90–92, 94,
100, 102–112, 115, 158, 230, 233,
234, 238, 241, 252, 253, 263, 275,
283, 299, 301, 302, 304, 305, 328,
346, 352, 359, 361, 368, 375, 376,
381, 388, 391, 400, 401, 416, 419–421,
423, 424, 427–432, 435, 436, 439,
443, 452, 468, 471, 475, 476, 485
atmospheric corrosion, 68
atomic force microscopy, 427
atomic layer deposition (ALD), 427
atomic layer epitaxy (ALE), 427
atomic layer growth, 427
atomic layer reaction, 427
atomic layer self-assembly, 427
atomic layer selectivity, 427
atomic resolution X-ray photoelectron spectroscopy (ARXPS), 427
atomic spectroscopy, 427
atomic structure, 427
atomic transition, 427
atomic vibration, 427
atomic weight, 427
atomic X-ray photoelectron spectroscopy (AXPS), 427
atomic X-ray photoelectron spectroscopy (AXP), 427
atomic X-ray photoelectron spectroscopy (AXPSM), 427
atomic X-ray photoelectron spectroscopy (AXPSM), 427
atomic X-ray photoelectron spectroscopy (AXPS), 427
atomic X-ray photoelectron spectroscopy (AXP), 427
atomic X-ray photoelectron spectroscopy (AXP), 427
atomic X-ray photoelectron spectroscopy (AXPS), 427
atomic X-ray photoelectron spectroscopy (AXPSM), 427
aluminum flakes, 423
aluminum oxide (nano-size), 443
aluminum pigments
leaching, 301
in metallic colors, 301
nonleaching, 274, 301
aluminum silicate pigments, 230, 302, 305, 452
aluminum trihydrate, 439
amidoamines, 196
amine adducts of epoxy resins, 195
aminoplast resins, see amino resins
3-aminopropyltrimethoxysilane, 94, 184, 232
amino resins
urea-formaldehyde resins, 161
glycoluril-formaldehyde resins, 161–162
melamine-formaldehyde (MF) resins
class II resins, 155
class I resins, 154–155
etherrification reaction, 152–153
methylolation reaction, 152
MF-polyol reactions, 155–161
self-condensation reactions, 153–154
poly(meth)acrylamide-formaldehyde resins, 162
urea-formaldehyde resins, 161
ammonium fluoride, 182
anionic polymerizations, 16
anionic electrodeposition coatings, 375–376
anionic polymers, 375–376
anodic electrodeposition coatings, 375–376
anionic polyurethane dispersions (PUDs), 443
aqueous media dispersion, 313–315
aqueous dispersions, 125
aqueous media dispersion, 313–315
aqueous polyurethane dispersions (PUDs), 366, 370
architectural and industrial maintenance
(AIM) coatings, 264
architectural coatings
exterior house paints and primers, 450–455
flat and semigloss interior paints, 455–459
gloss enamels, 459–462
alkyd gloss enamels, 459–460
latex gloss enamels, 460–462
online and in-store computerized systems, 449
Arrhenius equation, 21
associative thickeners, 454, 461
atmospheric photochemical effects, 260–262
atomic force microscopy (AFM), 26, 76, 84
atomization, 334, 338
atom transfer radical polymerization (ATRP), 16, 314
attapulgite clay (fuller’s earth), 303
attenuated total reflectance spectroscopy (ATR), 82
Auger electron spectroscopy (AES), 92
autodeposition coatings, 383
automobile refinish paints, 474–477
acrylic refinishing lacquer, 476
dual thermal/UV cure clear coats, 477
fast-reacting gel coatings, 477
lacquer and enamel, 475–476
loV, 476
OEM coating, 475
technical challenges, 475
thermosetting hydroxy-functional acrylic resins, 475
VOC emissions, 475, 477
waterborne base coats, 476
automotive coatings, for original equipment manufacturer (OEM), 419–427
base coats, 423–424
aluminum flakes, 423
color retention, 423
color travel, 423
minimal light scattering, 423
popping and improved appearance, 424
solventborne base coat binders, 423
water-dispersible carboxymethylcellulose acetylatebulyrate, 423
clear coats, 424–426
corrosion protection, 419
electrodeposition coating formulation, 421–422
factory repair procedures, 426–427
paint process, 420–421
paint shop, 419
paint process, 420–421
primers, 422
US market, 419
autophoretic coating, 383
autoxidation and cross-linking, 206–209
autoxidizable polyurethane dispersions, 225
azelaic acid (AzA), 145
azeotropic behavior, 254
azobisisobutyronitrile (AIBN), 14
azo initiators, 116
backscattering of infrared, 321
bactericides, 314, 453
ball mills, 305, 317–318
barium borosilicate, 303
barium metaphosphate, 109
barium phosphosilicate, 109, 303
barium sulfate (barytes), 303
barrier coating systems, see maintenance paints
barytes, 303
base coats, 76, 98, 353, 421
bead mills, 318
Beer–Lambert law, 271, 404
Bénard cells, 351
bentonite clay pigment, 303, 347, 365
benzil, 15
benzimidazolone orange, 299
benzoguanamine, 151
benzoguanamine-formaldehyde resins, 161
benzoic acid, 215–216
benzoin, 393
benzoin ethers, 406
benzophenones, 70, 407
benzothiazylthiolsuccinic acid, 109
benzotriazoles, 70
benzyl peroxyde (BPO), 14, 119, 201, 223, 224, 239
benzyldimethylamine, 195
benzylidene malonates, 70
benzyltrimethylammonium chloride, 200
beverage cans, 199, 235, 369, 429, 431
bicyclic orthoesters, 473
bidirectional reflectance distribution function (BRDF), 285, 286
bimolecular (type II/PI2) photoinitiators, 407
binder, definition of, 13
binder index, 325
Bingham bodies, 30
biocides, 303, 453, 473
based antifouling coatings, 473
biopolymers, 6
bis(trimethoxysilyl)amine, 443, 476
bisdodecyldiphenylphenyliodonium hexafluoroantimonate, 413
bis-(methyl isobutyl ketone) ketimine of ethylenediamine, 27, 221
bismuth salts, 378
bismuth tris(2-ethyl hexanoate), 181
bisphenol A (BPA), 23, 54, 69, 89, 188–191, 358
butyoxymethylated, 199
bisphenol F, 191–192
bis-(2,4, 6-trimethylbenzoyl)-phosphine oxide (BAPO), 407
bis-triocyrtol oxide (TOTO), 378
biurets, 164, 172
black hiding, 274
black pigments, 300–301
bleeding, 299
blistering, 77–79, 112, 359, 450
blister tests, 97
block copolymers, 6, 12, 369
blocked acids, 157
blocked amines, 181, 194, 243
blocked catalysts, 21, 201
blocked isocyanates, 176–181, 378, 388–389
blocking groups, 178–180
catalysis of deblocking, 180–181
deblocking pathways and kinetics, 176–178
FTIR analysis, 177
Isothermal thermogravimetric analysis (TGA), 177
thermal thermogravimetric analysis (TGA), 177
unblocking temperatures, 177
blocked reactants, 21, 23
bloom gloss, 286–287
blooming, 129
blown oils, 210  
blue pigments, 294, 300, 320  
blushing, 196–197  
bodied oils, 210  
 bond line readout, 350  
boron trifluoride etherate, 201  
 bounce back, 332, 333  
BPO, see benzoyl peroxide  
 branched polymers, definition of, 7  
BRDF, see bidirectional reflectance distribution function  
brittle–ductile transition temperature, 133  
bronze pigments, 301  
brush application, 29, 331–332, 338, 344, 459  
brush drag, 331–332

electrostatic fluidized beds, 396, 399
powder coatings, 399
electrostatic spraying
bell electrostatic spray equipment, 335
corona, 397
disk electrostatic spray equipment, 336
electrostatic spray(ing) (cont'd)
“dry-on-dry” powder coating, 399
Faraday cage effect, 398
film thickness, 398
particle size and distribution, 398
production equipment, 397
shaping air, 335
triboelectric charging, 399
water-washed spray booths, 398
wrap around effect, 335
elongation-at-break, 52, 55, 59, 62, 444
embrittlement, 57, 84, 220
EMMAQUA exposure, 80
emulsion coatings, 371–372
emulsion polymerization
miniemulsion, microemulsion, and suspension polymerizations, 132
monomer-starved conditions, 126
physical circumstances, 125
pop-bottle process, 126
raw materials, 126–129
reactor design and rate of agitation, 125
semicontinuous batch process, 126
sequential polymerization, 132
small-scale batch process, 126
variables, 130–132
e enamel hold out, 329
capsulation, 23
e energy of vaporization, 248
tenctropic repulsion, 128–129, 308
tenropy of mixing, 364
environmental etching, 76, 160, 424
environmentally sensing coatings, 485
epichlorohydrin (ECH), 188
epoxidized linseed oil, 201
epoxy binder, 386–387
epoxy e-coats, 427
epoxy equivalent weight (EEW), 190
epoxy esters, 225–226, 362
epoxy-functional acrylics, 120
epoxy phosphates, 202, 358, 465
epoxy powder coatings, 385
epoxy resins
amine cross-linked epoxy resins, 194–197
bisphenol A epoxy resins, 188–191, 362
cross-linking agents, 199–201
erosible coatings, 473
esterification, 18, 142–143, 200, 222
esters, hydrolytic stability of, 143
estrogen mimic, 430
ethanamine, 183, 376
ethoxylethoxyethyl acrylate, 410
ethoxylatedundecyl alcohol, 136
ethylene/ acrylic acid copolymer, 391
ethyleneglycol dimethacrylate
(EGDMA), 116
ethylene/ propylene rubber, primer for, 445
ethylenediacrylate copolymer, 236, 445
2-ethylhexyl acrylate, 410
2-ethylhexyl benzoate, 462
ethyl linolate, 208, 209
ethylsilane, 234
ethyltriphenylphosphonium acetate, 192
evaporation of solvents
coating films, 254–256
high solids coatings, 256
humidity effect, 254
mixed solvents, 253–254
relative rates, 251–253
single solvents, 251
waterborne coatings, volatile loss, 255–257
evacuometer, shell thin film, 253
eximer lamps, 404, 413
excited state quenchers, 70–71
quenching volume, 70
exempt solvents, 175, 225, 262–263, 360, 476
experimental design, 177
explosive hazards, 400
extensional flow, 43–44
exterior can coatings, 430–431
exterior durability
accelerated laboratory weathering devices, 80–82
accelerated outdoor exposure, 79–80
chlorinated resin degradation, 75
coating changes, during weathering, 82–84
hydrolytic degradation, 75–77
natural weathering, 78–79
photoinitiated oxidative degradation, 67–70
photostabilization, 70–75
service life prediction, 84
exterior house paints, 450–455
extruders, 320, 395
falling sand abrasion test, 65
fall out from spraying, 332
Faraday cage effect, 336, 398, 399, 401
fat edge, 350
fatty acid-modified polyurethane dispersions, 225
ferric hydroxide, 101, 107
ferric phosphate, 90
ferrous hydroxide, 100, 101
filiform corrosion, 102, 107
film defects
bubbling and popping, 353–354
crawling, cratering and related defects, 348–351
dirt pickup, 355
floating and flooding, 351–352
foaming, 354–355
leveling, 344–346
sagging and drip marks, 346–348
surface tension, 342–344
wrinkling, 352–353
film formation
by coalescence of polymer particles, 24–27
by cross-linking, 20–24
by solvent evaporation, 19–20
film rupture, 380
film thickness, 56
fire retardancy, 472
flame spray, 399–400
flammability, solvents, 258–259
flash points, 258, 259
flash rusting, 470
flat gloss, 286
flat interior paints, 455–459
flattening pigments, 303
flavor, 428
flexibility, 11–12, 65, 161
floating, 351–352
floculation, 128
floculation, 399
floculation gradient technique, 321
flooding, 351, 352
flop index, 274
color flop, 423
flow coating, 339
flow window, 392, 393
fluidized beds, powder coatings, 399
fluorescent light, 268, 434, 456
fluorinated ethylene propylene copolymer (FEP), 236
fluorinated polymers, 236–237
fluorinated resins, 363
fluorinated urethane coatings, 472
fluoropolymers, 391
foaming, 354–355
formability, 65
fountain roll coating, 339
Fox equation, 12
fracture mechanics, 57–58
Fresnel reflector weathering devices, 80
EMMAQUA, 80
FRECKLE, 80
Sun-10, 352
free radical-initiated UV cure coating, 406–412
oxygen inhibition of, 408–409
photoinitiators for, 406–408
vehicles for, 409–411
waterborne, 411–412
free volume, 11, 20, 23, 25, 36, 105, 254, 255, 392
freeze-thaw stability, 129, 183, 458, 462
freezing point depression, 9, 483
Fresnel equations, 269
Fresnel reflectors, 80
friction, effect on abrasion resistance, 59
frosting, 453
FT Raman analysis, 208
fumaric acid, 238, 239, 390
functional coatings
antimicrobial coatings, 304, 485
environmentally sensing coatings, 485
ice-phobic coatings, 483–484
self-healing coatings, 484–485
superhydrophobic and superhydrophilic coatings, 480–483
functional pigments
antifouling coatings, 303
flattening pigments, 303
infrared reflecting pigments, 304
viscosity modifiers, 303
furnace blacks, 301
furniture coatings, 184, 438, 440, 442
distressing of, 439

radiation cure coatings  
abstraction of radiation, 404–406  
advantages and disadvantages, 416–418  
anionic UV cure, 417  
cationic photoinitiators, 412–413  
cationic UV cure, 412–413  
dual UV/thermal cure, 415–416  

degradation, 75  
fluorinated resins, 363  
hydrocarbon resins, 195, 474  
melamine-formaldehyde (MF) resins, 451  
methyl silicone resins, 230  
novolac epoxy resins, 192, 197, 385, 387, 465, 466  
novolac phenolic resins, 192, 199, 203  

**Materials**  
stabilized dispersions, 309  
resol phenolics, 76, 199, 200, 202–203, 383, 429, 430  
retained solvent, 20, 255  
retraction, 348–351  
retroreflectivity, 477  
reverse impact resistance, 65  
reverse roll coating, 339, 340  
reversible addition-fragmentation-chain  
transfer (RAFT) polymerization, 16  
rheology, 29, 423  
rheometers, 33–34  
ricinoleic acid, 205  
rime ice, 483  
roll coating, 339–340  
roll tracking, 339  
resin-modified phenolic resins, 203  
rotating disk viscometers, 34  
rotor/stator mixers, 219, 317  
rubbing, 24, 66, 67, 311, 312, 320, 352, 432, 439, 440, 475, 476  
rutile TiO2, 74  
sagging, 346–348, 365, 382  
salt spray (fog) test, 112, 195, 199, 224  
sandblasting, 90, 465  
sanding sealers, 439  
sand mills, 318  
saponification resistance, 92, 105, 107, 110, 181, 224, 240, 358, 368, 466  
satin paint, 454  
Scanlan equation, 54  
scanning electron microscope (SEM), 92, 93, 234, 349  
scanning probe microscopy, 26  
scratch resistance, 59–61  
seed latex, 131  
self-condensation, 153–154  
self-cross-linking paints, 26  
self-healing coatings, 484–485  
self-polishing polymer coatings  
(SPCs), 473  

**SEM**  
*see* scanning electron microscope  
semitransparent interior paints, 455–459  
shear flow, 29–32  
Bingham bodies, 30  
Casson equation, 31  
definition, 29  
dilatant fluids, 30  
kineamic viscosity, 29  
Newtonian flow, 30  
shar-induced order, 30  
shear thinning, 30  
simple shear viscosity, 29  
thixotropic flow, 31–32  
yield value, 30  
shar-induced order, 30  
shear stress, 29, 47  
shear thickening, 30, 34, 461  
shear viscosity, 32–42  
sheet, 286  
sheet molding compound (SMC), 446  
shell-life, *see* package stability  
shot mills, 318
shrinkage during film formation, 56, 74, 107, 290, 424
side stripers, 428
siding, 46, 55, 56, 77, 231, 283, 370, 433, 434, 442–443, 450–451
silanes, 232–233
silanol, 94, 228, 230, 231, 233, 425, 441, 477
silicon dioxide pigments, 302–303
silicone resins, 363
silicones
modified resins, 230
rubbers and resins, 229–230
structures, 228
siloxanes, 156, 228, 229, 240, 350, 355, 369, 447
silsesquioxanes, 228
simple shear viscosity, 29
simulated tests, 111
size exclusion chromatography (SEC), 8
skinning, 209, 460
slippery liquid infused porous surfaces (SLIPS), 482, 483
smart coatings, see functional coatings
SMA, 446
sodium benzoate, 470
sodium bicarbonate, 90, 136
sodium dichromate, 108
sodium dodecylbenzenesulfonate, 131
sodium formaldehyde sulfoxylate, 127
sodium hypochlorite, 446
sodium lauryl sulfate, 127
sodium nitrite, 470
sodium polyacrylate, 199
sodium sulfate, 127
sodium vinyl sulfonate, 136, 457
softening point, 62
sol–gel coatings, 233–234
solid amino resins, 389
solvency, 106, 130, 238, 297, 413
parameters, 247–248
three-dimensional solubility parameters, 248–250
solubilizing agent, 381
solvent(s), 3, 251–256
composition, 246–247
conductivity, 259
density, 259
emissions from coatings, 262–265
evaporation of, see evaporation of solvents
flammability, 258–259
physical properties, 247–250, 259
surface tension, 259
toxic hazards, 250–260
viscosity effects, 257–258
solventborne coatings
advantages, 357
low VOC, 363–365
motivations for, 357
primers
binders, 358–359
high solid primers, 359–360
penetration, 358
pigmentation, 359
saponification resistance, 358
top coats, 360–363
solventborne uralkyds, 443
solvent evaporation rates, 251–257
from coating films, 254–256
from high solids coatings, 256
from waterborne coatings, 256–257
humidity effect, 254
mixed solvents, 253–254
relative rates, 251–253
single solvents, 251
solvent free liquid coatings, 364
solvent recovery, 261, 262, 264, 357
solvent resistance, 138, 139, 156, 174, 216, 371, 467
solvent resistance test, 66
soya bean oil, 206, 207, 211, 214, 215, 217, 218
spacers, 457
sparking, 379
spar varnish, 203, 210, 474
spattering, 41, 43, 44, 332, 457
spectral power distribution (SPD), 267–268
specular gloss, 286–290
spectral reflectance, 269
spray application
airless spray guns, 333–335
air spray guns, 333, 334
baseline transfer efficiency, 333
bounce back, 332
disadvantage, 332
electrostatic spraying, 335–336
fall out, 332
formulation, of solvent mixtures, 337–338
hot spray, 336–337
overspray, 332
overspray disposal, 338
supercritical fluid spray, 337
transfer efficiency, 332–333
temperature conditioned spray, 65
steel ball mills, 301, 317
stearic acid, 205
standard human observer, 276
staged feed latex, 134
sward rocker, 92
stress–strain tests, 51
stress–strain curves, 48
Størmer viscometer, 36
stress and strain signals, 52
stress–strain tests, 51
t–triazines, 70
substrate, definition of, 1
subtractive color mixing, 281
succinic acid, 145
sulfonium salts, 412, 415
Sun–10 exposure, 80
sunflower oil, 219
sunlight, 67, 69, 79, 80, 82, 237, 247, 267, 270, 485
supercritical fluid spray, 337
superdurable polyester resins, 141
superhydrophobic and superhydrophilic coatings, 480–483
superhydrophobic surface, 480–482
supramolecular polymers, 7
surface tension, 342–344
classical method, 343
differential–driven flows, 343–344
dimensions, 342
dipolar groups, 342
gradient–driven flow, 343
of solvents, 259
organic liquids, 343
poly(dimethylsiloxane), 342
tears of wine, 343
of water, 367
surfactants, 127–129
alkenyl–functional surfactants, 129
anionic and nonionic surfactants, 127
hydroxyethyl cellulose (HEC), 129
micelles, 128
poly(vinyl alcohol) (PVA), 129
stabilization, 128
water sensitivity, 129
suspension polymerization, 130
Sward rocker, 64
swelling of cross–linked polymers, 94
synergism, 104–105
synergistic stabilization, 72
synthetic conjugated oils, 210
cross–link density calculation, 77
synthetic polymers, 6
sward rocker, 92
swelling of cross–linked polymers, 94
Taber Abraser test, 65
tacky process for epoxy resins, 188
talc, 61, 106, 468
T–bend test, 65
r–butylcarbodiimidoethyl methacrylate, 138
r–butylhydroperoxide, 127
telegraphing, 388, 348, 350, 382
temperature conditioned spray, see hot spray
tensile–at–break, 58
tensile deformation, 46
tensile force, 47
tensile tests, 47, 52, 58
terephthalic acid (TPA), 387
tetramethyloxymethylglycoluril (TMXGU), 469, 476
tetraisobutyl titanate, 220, 231
tetramethyloxymethylglycoluril (TMXGU), 151, 161, 427
tetramethylammonium octoate, 168
tetramethyloxanilidine (TMG), 244
tetramethyl–m–xylidene disiocyanate (TMXDI), 171, 388
tetraethoxysilane, 370
tetraethyl orthosilicate (TEOS), 110, 233,
342
Tetrahydropyran, 168
Tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
tetraisopropyltitanate, 220, 231
Tetraisopropyltitanate, 220, 231
Tetraisopropyltitanate, 220, 231
Tetraisopropyltitanate, 220, 231
Tetraisopropyltitanate, 220, 231
Tetraisopropyltitanate, 220, 231
Tetraisopropyltitanate, 220, 231
Tetraisopropyltitanate, 220, 231
Tetraisopropyltitanate, 220, 231
Index

vinyl ethers, photopolymerization, 413
vinyl 2-ethylhexanoate, 137
vinyl-modified oils, 211
distilled, 211
vinyl pivalate, 137
vinyl tris(ethoxysilane), 139
vinyltrimethoxysilane, 120
viscoelasticity
creep and stress relaxation behavior, of polymer, 50
dispersed liquids, 40–42
metals and ionic solids, 49
stress relaxation, 50
time-dependent behavior, 50
time-temperature superposition, 52
WLF theory, 52

rheometers, 33–34
viscosity
definition of, 29
dispersed phase, effect on, 40–41
effect of polymer concentration, 37–39
solvent effects, 39
solvent-resin interactions, effect on, 38–39, 257–258
temperature dependence, 36–37
viscosity effects, solvents, 39
viscosity modifiers, 303
visual color matching, 283–284
vitrification, 23
volatile organic compounds (VOCs), 246, 260
determination, 262–264
emissions, 450
wash coats, 439
wash primers, 358
waterborne coatings
aqueous polyurethane dispersions (PUDs), 366
binders, 367
casein paints, 366
determination, 262–264
latex-based coatings, 369–371
latex-coated, 371–372
nonflammability, 366
organic solvent, 366
surfactants, 367
VOC emissions, 366
water-reducible coatings
abnormal pH behavior, 368
alkyls, 368
blocked isocyanate and MF resin crosslinking, 368
change of viscosity, 367
epoxy esters, 368
glass transition temperature, 379
low solids, 368
low viscosity polyisocyanates, 369
spraying and flash-off, 369
polyesters, 141
two-package (2K) urethane coatings, 369
vitrification, 23
volatility and base strength, 368
water thinning, 366
waterborne urethane coatings, 468
waterborne UV cure coatings, 411–412
waterborne zinc-rich primers, 469
water quality, 129
water-reducible alkyls, 368
water-reducible epoxy esters, 201–202, 368
water-reducible polyesters, 141
water-reducible thermosetting acrylic resins
abnormal pH effect, 122
acid number, 121
amines effects, 124
dilution behavior, 123
dispersion stability, 123
DMAE partitions, 122
hydroxyl-substituted amines, 123
2K waterborne urethane coatings, 124
melamine-formaldehyde resins, 124
viscosity dependence, 121
water-thinnable coatings, 149
wave guides, 416
wax, 59, 239, 393, 424, 429, 431, 432, 444, 460, 475
weathering
coating changes during, 82–84
deVICES, 80–82
natural weathering, 78–79
weight average molecular weight, 7, 8, 231
Wenzel state, 481
wet adhesion, 104
wetting, 4, 88, 307, 451
wet paint, 451
wet lapping, 454, 462
wet paint, 451
wetting, 4, 88, 307, 451
white hiding, 274
white lead, 4, 5, 273, 295
white pigments, 293–296
William-Landel-Ferry (WLF) equation, 19, 36
wire paints, 3, 361
WLF theory, 52
wood coatings
furniture
disadvantage, 440
distressing, 439
formaldehyde emissions, 440
frame and legs, 440
hybrid resin combinations, 441
melamine-formaldehyde (MF) resins, 440
moisture-curable urethane coatings, 440
purpose of filling, 439
sanding sealer, 439
self-healing coatings, 441
US furniture manufacturing, 438
panel, 438
panel, 438
determination, 262–264
two-package applications, 468
waterborne zinc-rich primers, 469
zinc stearate, 365, 439, 444
zinc sulfide, 295, 303
zinc tetroxychormate, 108
zinc yellow, 108, 109, 470, 471
zirconium complex with 2,4-pentanedione, 168–170
zinc iron phosphate, 109
zinc/manganese phosphate, 420
zinc molybdate, 109
zinc molybdenum phosphate, 109, 393, 420
zinc octanoate, 229–231
zinc oxide, 105, 110, 295, 303, 359, 453, 470
zinc phosphate, 90–93, 104, 109, 303, 375–376, 420
zinc-rich primers, 109–110, 469, 472
inorganic and organic, 469
intermediate epoxy/polyamide coat, 470
mist coat, 469
polyurethane binders, 469
two-coat applications, 468
waterborne zinc-rich primers, 469
zinc stearate, 365, 439, 444
zinc sulfide, 295, 303
zinc tetroxychormate, 108
zinc yellow, 108, 109, 470, 471
zirconium complex with 2,4-pentanedione, 168–170
zirconium driers, 208
Zn-Mn-Ni phosphate conversion coatings, 378
