C–C bond cleavage 126–132
chain growth 314–315
chain walking 279
chemocatalysis, equivalence of 30–32
Chilton–Colburn analogy 84, 100
clariant process 247
classical chlorohydrin route 18
‘classical’ guidelines for catalyst testing 536–557
– appropriate laboratory reactor, selecting 546–548
– catalyst stability, assessing 554–555
– data collection 543–546
– effective experimental strategies 541–543
– two-variables system 542
– encouraging effectiveness 536–540
– ensuring efficiency 540–555
– ideal flow pattern, establishing 548–549
– isothermal conditions, ensuring 549–551
– quality guidelines 540
– selectivity 544
– space–time yield 545
– transport, diagnosing and minimizing the effects of 552–554
– ‘DrySyn’ Beta vs commercial Beta performance 553
– diagnostic tests for interphase (external) transport 552
– diagnostic tests for intraparticle (internal) transport 553
– yield 545
cobalt 312
– cobalt catalyst formation 321–322
– cobalt promoter 394–395
co-catalysts 59
co-catalyzed carbylation 241
cofactor regeneration 178
Coherent Anti-Stokes Raman Spectroscopy (CARS) 502
combinatorial approaches in solid catalysts development 453
– for optimal catalytic performance 453–456
– compensation effect 44–46
– exocyclic methylation reaction 45
– pairing reaction 45
– complex reaction 73
– consecutive first-order reactions 82
– consecutive reactions 92
– constant selectivity relationship 159
– constrained geometry catalysts 279
Continuously Operated Ideal Stirred Tank Reactors (CSTR) 580–581
– space time in 583
continuously stirred tank reactors (CSTRs) 546–547
continuous-phase contacting 616–618
– falling-film contactors 617
Corynebacterium glutamicum 253
coupling of catalytic reaction 42
crystalline catalysts design 222–223
cumylhydroperoxide (CHP) 362
cycle, catalytic 20–27

\(d\)

Damköhler number 81–82, 547
de Donder concept 32
deactivation, catalyst 58–64
– due to irreversible reactions 65–64
– due to multinuclear complexes formation 61–62
– due to non-reactive complexes formation 61
dered hydrogenases 176–178
– alcohols synthesis 176–177
– amino acids synthesis 177–178
– formate dehydrogenase (FDH) 178
– polyethylene glycol (PEG) 178
– Prelog-rule 177
dered hydrogenation 126–132
– cyclohexane dehydrogenation 131
– mechanism of 126
– olefin hydrogenation kinetics 126–127
density functional theory (DFT) 209, 367, 395–397
deposition precipitation 427–428
desulfurization 291
development of catalytic materials 445–459
– catalytic OCM reaction, reaction mechanism and kinetics of 448–449
– combinatorial approaches in 453–459
– fundamental aspects 446–448
development of catalytic materials (contd.)
– high-throughput technologies in 456–459
– kinetic analysis 450–451
– micro-kinetics and solid-state properties as knowledge source 448–453
– – electronic conductivity 452
– – ion conductivity 452
